THE accompanying Statistical Report on Kolhapoor, which is now published by order of the Right Honorable the Governor in Council of Bombay, has been prepared* by Major D. C. Graham, Political Superintendent of that Estate, consequent on the following Despatch from the Honorable the Court of Directors to the address of the Government of India, dated the 3rd June 1846.

* Submitted to Government by Major Graham on the 1st February 1854.

FINANCIAL DEPARTMENT (STATISTICAL).

NO. 6 OF 1846.

OUR GOVERNOR GENERAL OF INDIA IN COUNCIL.

1. The great practical importance of statistical inquiries, and the attention which they now receive from the most enlightened European Governments, have induced us to take measures for investigating the statistics of the countries under our administration, and for arranging and preserving, in the most convenient for reference, the information which may be attainable.

2. With the view of accomplishing these ends, we have formed a Statistical Department in our Home Establishment, in which the requisite inquiries are being conducted, and the materials thereby obtained classified and compiled.

3. The voluminous records and documents in our possession contain a vast amount of statistical information, and the labours of the Statistical Department will, in the first instance, be directed to extracting and arranging the information available for reference. These duties, which have already continued for a long period to claim a large share of the time and attention of the Department; but the results will be imperfect, unless the co-operation of our Governments in India, in collecting and transmitting statistical information, we are enabled to remedy the defects, and, as the condition and circumstances of all countries are constantly varying, to note the changes which time produces.

4. We do not doubt that our servants will cheerfully co-operate for these purposes; and as the aid which they are expected to give is not intended, and must not be permitted to interfere with their ordinary duties, no detriment will arise.

on the contrary, much advantage may be expected from the transmission home of such information as to local details which so many of our servants cannot fail to possess.

5. Information will be most desirable on such subjects as the following :—

Land.—Area.

Geological structure.

Natural aspect.

Soil.

Atmosphere and climate.

Productions.

Modes of cultivation.

Prices of principal products.

Tenure and occupation.

Modes and rates of assessment.

Labour employed, and its remuneration

Water.—Navigable rivers.

Description of.

Length of.

How far navigable.

Vessels employed on them

Lakes.—Description, and situation.

Canals.—Their purposes.

a Length and depth.

Vessels employed on them.

Cost and return on the outlay.

Wells and tanks.

Means of irrigation in each district.

m Harbours, and shipping frequenting them.

k Towns and villages.

Situation and general description.

r Number of houses, and whether pukka or kutcha.

i Numbers of people of different descriptions.

o Employment.

u Languages.

o Religion.

o and disease.

o Troops, especially with presumed causes of healthy or

u state, and the treatment (not strictly medical) found

o eful.

o and method of pursuing it.

o Institutions not educational.

o of Crime.

o Remuneration, and efficiency.

Capital employed.

Imports and exports from official sources.

Exchange.

Weights and measures.

Coins.

Banking operations.

Lending and borrowing.

Modes of Transit and Communication.—By land.

By water.

Impediments, and their duration.

Fords, ferries, and bridges.

Postal Arrangements.

Taxation.

Sources of revenue, and produce of each tax.

Mode of collection.

Number in Seebundee or other corps engaged in collecting revenue

History and Antiquities; facts illustrative of early or more recent history and of changes, political, or agricultural.

Public Buildings.

6. We need scarcely observe, that in statistical investigations, the most rigid accuracy as to matters of fact is indispensable. Erroneous information will be worse than none, because it can but tend to mislead.

7. There may be some subjects, especially those relating to physical science with which our servants generally may not be minutely acquainted, a statement on these, or any other matters of inquiry, will be of any value they be both precise and accurate. Where the requisite measure of knowledge is not possessed by others, it may, perhaps, in many cases be supplied by our medical officers, and their aid will, we doubt not, be fully rendered whenever required.

8. In conclusion, we direct attention to the following general

9. In all cases, where practicable, reports should be based on the personal knowledge of the officer reporting, and where such is the case it should be mentioned.

10. Where, from any cause, the personal knowledge cannot be extended to any object of inquiry, the authority on which the report rests must invariably be stated, either in the margin, or in the report.

11. When estimates only can be furnished, the reasons for adopting them must be stated, and the reasons for adopting it.

12. Where information is orally given, it should be noted at the time; in like manner personal observations should be noted at the moment of making them.

13. In addition to the names by which places are generally known, it would be desirable that the original names should

Devānagari* and Urdu character, according to the best authorities, especially local and native.

14. In regard to coins, weights, and measures, care must be taken to preserve uniformity as to valuation, comparison, and conversion, and to insure this, Prinsep's useful tables may be taken as a guide.

15. Where any material variations exist in different parts of any country, or divisions of a country reported on, the nature and limits of such variations should be precisely pointed out.

16. It will be observed, that the greater part of the instructions above given are designed to insure accuracy, the importance of which we have already adverted to. It is the more necessary to dwell upon this point, inasmuch as some previous attempts to afford statistical information are unsatisfactory, because obviously incorrect.

17. Thus in a calculation† made of the population of the North-Western Provinces in 1826, (excluding the ceded districts on the Nerbudda, and those ceded by the Raja of Berar,) founded on an actual enumeration of the villages in those provinces, and a partial enumeration of the houses, the amount is taken at 32,206,806, and the number of square miles occupied by this vast mass, as ascertained by measurement upon a map, is stated to be 66,510. Thus, rejecting fractions, it would give a population of 484 to the square mile; while in an estimate of the population of the principal portion of the lower provinces of the Bengal Presidency in 1822, the amount is given at 37,503,265, the amount in square miles (ascertained, as in the North-Western Provinces, by measurement upon a map) at 153,802, affording no more than 243 inhabitants to the square mile, little more than half the number claimed for the North-Western Provinces, notwithstanding that the lower provinces contained the cities of Calcutta, Dacca, Moorshedabad, and Patna, and the populous districts around them.

the population of China, universally considered one of the most populous countries, is, according to the highest Native‡ estimate, only 100 to the square mile.‡

in a statement of the statistics of the North-Western Provinces, ordered by the Lieutenant Governor, and bearing date the 25th of January 1831, exhibiting a view of the area and population of twenty-two districts.

* State advertisements in the *Calcutta Gazette* are usually printed in the Urdu or Arabic character.

† Statement of the population and population of British India, as officially returned by the East India Company in First Appendix to the Third Report from the Select Committee on the East India Company, House of Commons, 1831. These statements have been adopted by Mr. Mill (vide his History of India, Vol. I. page 5).

‡ Vide Davis's China, page 413.)

§ (vide Geographical Dictionary, Vol. I. page 582), the relative population, abounding as it does in capital, manufactures, and large cities.

districts, constituting by far the larger portion of those provinces, we observe particulars which lead us to suspect that even this later document is not trustworthy. Aligur, a district without any considerable town, is stated to have an agricultural population of 56,679, and a non-agricultural population exceeding it more than eleven times, the number given being 644,499 ; while the district of Benares, containing the great and populous city of the same name, which, with its suburbs, has been estimated to contain 200,000 souls, is said to have 299,167 agricultural inhabitants, and only 145,940 non-agricultural.

20. We notice these extraordinary errors that we may impress, upon those who may be called upon to act upon our present orders, the necessity of employing such vigilance and attention as may be sufficient to guard against the transmission hereafter of any statement so deficient in accuracy.

21. It should be fully borne in mind that every statement that may be furnished will undergo searching examination at home, and we trust that each one will be prepared with such care as may ensure our approbation.

We are, &c.

(Signed)

J. W. Hogg,

And fourteen other Directors.

London, 3rd June 1846.

STATISTICAL REPORT OF KOLHAPOOR.

ACCORDING to the Poorans, this tract of country was originally called "Kur-weer," from the Goddess Maha Luxoomee using her mace (Kur) in lifting this her favoured retreat from the waters of the great deluge; and it afterwards received the name of "Kolhapoor," from the demon "Kole," who was defeated and killed on a hill in the vicinity of the present capital. Both designations are still current among all classes. The word Kolhapoor, however, may owe its origin either to the Sanscrit "Kulhar," or to the Canarese "Kolihi," both terms signifying the Lotus.

DIVISION OF THE COUNTRY.—During the last six centuries, Kolhapoor has been subjected to many changes in its boundaries.

At one period, in the twelfth century, the territory extended to the north of Satara and to the south of Goa, to the river Krishna and to the sea. It was afterwards partitioned into various petty estates, and accounted a dependency of the Mogul. Reunited in 1700 by the great Shivajee, it was again separated by his descendants, and was finally deprived by the British Government of its possessions in the Konkun and Southern Muratha Country.

The principality of Kolhapoor, consisting of a disposition of vale and mountain in a series of ranges, running generally in parallel lines eastward from the great Sahyadree chain, is now bounded on the north by Satara; on the west by the Southern Konkun and Waree; on the south by the Collectorate of Belgaum; and on the east by the Putwurdhun Estates of Koorundwar, Meeruj, and Sanglee, together with a part of the Belgaum Collectorate.

The possessions below the Western Ghauts form a portion of the Konkun: the hilly tracts have the general name of "Konkun Ghaut Matha," and the valleys and plain country bear that of "Desh."

The entire State is divided into the following six Purgunas and nineteen Dependencies:—

Purgunas.

- | | |
|--------------------|----------------|
| 1. Kolhapoor. | 4. Gur Ingluz. |
| 2. Punala. | 5. Sherole. |
| 17. 3. Bhoodurgur. | 6. Alte. |

Dependencies.

- | | |
|-------------------------------------------------------------|------------------------------------|
| 1. Vishalgur. | 10. Jageer of Tatia Maharaj. |
| 2. Bowra. | 11. Jageer of Josee Rao. |
| 3. Walwa. | 12. Jageer of Raj Oopadhey. |
| 4. Kagul. | 13. Jageer of Surlushkur. |
| 5. Kapsee. | 14. Jageer of Himut Bahadoor. |
| 6. Inchulkurunjee. | 15. Jageer of Jibtun Moolk. |
| 7. Toregul. | 16. Jageer of Narayen Rao Ghatgay. |
| 8. Jageer of Jugut Gooroo <i>alias</i> Sunkeshwurswamec. | 17. Jageer of Ameer-ool-Oomrao. |
| 9. Jageer of Raojee Maharaj. | 18. Jageer of Hindoo Rao. |
| | 19. Jageer of Bheem Bahadoor. |

Kolhapoor proper, consisting of its six Purgunas, is divided from Satara on the north by the river Warna, and is nearly encircled on the remaining three sides by the great feudatory Jageers of Vishalgur, Bowra, Kagul, Kapsee, and Inchulkurunjee, whose Chiefs exercise independent jurisdiction, and which, with the exception of the Inam State of Inchulkurunjee, were all held on military tenure, and were granted in olden times to obtain protection for the rich, central valleys.

The Jageer of Vishalgur, above the Ghauts, is situated on the north-west corner. It contains 12,479 beegas of cultivated land, 14,748 inhabitants, dwelling in 20 towns and villages, and yields a net revenue of Rs. 35,954.

The Vishalgur possessions below the Ghauts consist of a divided interest in 223 villages, and an exclusive right to 20 separate villages. The entire control and management, however, of this portion, are under the Collector of Rutnagerec, who remits the annual net balance of Rs. 29,000.

Ranging along the summit of the Sahyadree Ghauts, for a distance of about 45 miles, and spreading out on either side about 24 miles towards the sea and the Deccan plain, this estate is generally covered with dense jungle, and deeply intersected by rapid torrents and ravines. It is exceedingly difficult for military and public operations, and although the fort, along with the other strongholds of Kolhapoor, was dismantled after the outbreak in 1844, the mountain still remains a most formidable natural position.

The villages are small, and widely scattered; the houses are built of sun-burnt brick, or mud, and thatched with grass, and the periodical rains being heavy, thick clouds constantly rest during the monsoon on the tops of the hills, exhibiting an atmosphere surcharged with moisture, which is more congenial to vegetable than to animal life.

Although possessing great natural advantages for irrigation, there is no existing capital or enterprise. Rice, Nachnec, and Sawwa are the principal crops. The revenue is chiefly paid in kind, and a Government advance is necessary to enable the poor cultivator to plant his field. The soil is also poor, and will not bear cultivation for more than two years in succession.

The passes through this district from the sea coast are rough, and hardly to

be ascended by lightly-laden cattle ; and the inhabitants, although very ignorant, are free from any distinguishing vice, and generally bear the marks of coarse food and an indifferent climate.

The features of the adjacent Jageer of Bowra, which extends for 24 miles to the southward, and forms a barrier to the Waree State, are similar to those of Vishalgur.

The forests are, however, thicker, and more happily situated, and furnish an abundant supply of excellent timber, which is floated in rafts down the rivers to the various market towns, whilst the bottoms of the dells afford rich crops of rice and tobacco.

This Jageer contains 41,892 beegas of cultivated land, and 29,845 inhabitants, dwelling in 72 towns and villages, and yields a revenue of Rs. 27,747.

The small Jageers of Walwa and Azra, a part of Inchulkurunjee, strike off at an angle eastward from Bowra, and form a portion of the southern protection from Waree and the Carnatic.

The Walwa district contains 2,637 beegas of cultivated land, and 3,075 inhabitants, dwelling in eight towns and villages, and yields a revenue of Rs. 29,757. Azra and Walwa belong to the Konkun Ghaut Matha, are thickly wooded, and occupy the low broken ridges and valleys which immediately depend from the great Western Ghauts. They are thinly populated, on account of the continuous jungle, the indifferent soil, and the insalubrious climate.

Kagul, Kapsee, and the remaining portion of Inchulkurunjee, form a part of the Desh, or open country, and conclude the Kolhapoor ring-fence to the south and east, affording protection from Nepanee, and the country of the Putwurdhuns.

The surface of these districts is slightly undulating, devoid of all jungle and forest, and the waters all flow to the eastward to join the river Krishna.

Kagul contains 17,012 beegas, and 28,290 inhabitants, dwelling in 70 towns and villages, and yields its owner a revenue of Rs. 1,80,738.

The small Jageer of Kapsee is placed on the south-east corner ; it contains 6,021 beegas of cultivated land, and 8,035 inhabitants, dwelling in 13 towns and villages, and yields a revenue of Rs. 22,455.

Inchulkurunjee, including the district of Azra, contains 13,831 beegas, and 43,000 inhabitants, dwelling in 88 towns and villages, and yields a revenue of Rs. 1,05,193.

The Jageer of Toregul is completely separated from Kolhapoor by the Collectorate of Belgaum, and is situated on the confines of the Dharwar Talooka.

It contains 78,484 beegas of cultivated land, and 30,000 inhabitants, dwelling in 32 towns and villages, and yields a revenue of Neelkunthee Rs. 52,194, or Co.'s Rs. 28,967.

The remaining Jageers are scattered over the face of the territory : they are, however, under the immediate control of their own chiefs, and contain

an aggregate amount of 29,610 beegas of cultivated land, and 32,398 inhabitants, dwelling in 71 towns and villages, and yield an aggregate revenue of Rs. 1,77,568.

KHALSA POSSESSION.—The Khalsa country remaining under the immediate jurisdiction of the Kolhapoor Government is divided into six Purgunas :—

1st.—Kolhapoor, which is situated in the centre of the territory, and encircled by the Punala Purguna to the north and west, by the Purgunas of Bhodurgur and Gur Ingluz to the south, and by those of Alte and Sherole to the east.

The Purguna of Kolhapoor contains a portion of hill as well as of open country. It extends east and west about 21 miles, and north and south 24 miles, and contains, exclusive of the Mankuree freehold estate, 44,412 beegas of productive land.

This amount is partitioned among 132 towns and villages. Of these, the largest, the capital, comprises 4,884 beegas, and the smallest 70 beegas. The first pays an annual revenue of Rs. 20,929, and the other of Rs. 280.

Of the 132 villages, 72 are held in Inam. The entire alienated land in the district amounts to 34,761 beegas; and the remaining amount of Government land, 9,651 beegas, produces a net revenue of Rs. 62,200. •

The soil of the Purguna is divided into three kinds—black, white, and red; of which the red predominates.

The villages have every appearance of comfort: 72 are situated on the river side, 50 on the plain, and 10 on the hilly country. The houses are built of brick or stone, and either tiled or terraced.

The total population of the whole Purguna, including the city and suburbs, amounts to 127,332 souls.

2nd.—The Purguna of Punala is of an irregular triangular shape, and also contains a portion of hill as well as of open country. It extends east and west about 25 miles, and north and south 50 miles, and contains, independent of the Munkuree freehold estate, 28,800 beegas of productive land.

This amount is partitioned among 193 towns and villages. Of these, the largest comprises 2,020 beegas, and the smallest 29 beegas. The first pays an annual revenue of Rs. 9,589, and the other Rs. 91.

Of the 193 towns and villages, eleven are held in Inam. The entire alienated land in the district amounts to 21,084 beegas, and the remaining amount of Government land, 7,716 beegas, produces a net revenue of Rs. 62,629.

The soil of the Purguna is divided into three kinds—black, red, and white; of which red predominates.

Of the villages, 113 are situated on the river, and in the valleys, peculiarly adapted for the growth of rice, 45 on the plain, and 35 among the hills.

The total population amounts to 63,974 souls.

3rd.—The Purguna of Bhodurgur contains a greater portion of hill than open country. It extends east and west 86 miles, and north and south 36 miles, and contains, independent of the Mankuree freehold estate, 26,513 beegas of productive land.

This amount is partitioned among 195 towns and villages. Of these, the largest possesses 568 beegas, and the smallest 23 beegas. The first pays an annual revenue of Rs. 3,444, and the other Rs. 39.

Of the 195 villages, 59 are held in Inam. The entire alienated land in the district amounts to 19,880 beegas, and the remaining amount of Government land, 6,633 beegas, produces a net revenue of Rs. 35,107.

The soil of the Purguna is divided into three kinds—black, red, and white ; of which the white predominates.

Of the villages, 53 are on the river, 109 on the plain, and 33 among the hills.

The total population amounts to 46,307 souls.

4th.—The Purguna of Gur Ingluz contains a greater portion of open than hilly country. It extends east and west 15 miles, and north and south 27 miles, and contains, independent of the Mankuree freehold estate, 64,400 beegas of productive land.

This amount is partitioned among 110 towns and villages. Of these, the largest possesses 2,133 beegas, and the smallest 80 beegas. The first pays an annual revenue of Rs. 2,534, and the other Rs. 262.

Of the 110 villages, 50 are held in Inam. The entire alienated land in the district amounts to 49,037 beegas, and the remaining amount of the Government land, 15,363 beegas, produces a net revenue of Rs. 30,619.

The soil of the Purguna is divided into three kinds—black, red, and white ; of which red predominates.

Of the 110 villages, 20 are on the river, and 90 on the plain.

The total population amounts to 54,910 souls.

5th.—The Purguna of Sherole is altogether open country. It extends east and west 18 miles, and north and south 39 miles, and contains, independent of the Mankuree freehold estate, 49,323 beegas of productive land.

This amount is partitioned among 54 towns and villages. Of these, the largest possesses 3,177 beegas, and the smallest 288 beegas. The first pays an annual revenue of Rs. 19,873, and the other Rs. 2,609.

Of the 54 villages, 32 are held in Inam. The entire alienated land in the district amounts to 40,060 beegas, and the remaining amount of Government land, 9,263 beegas, produces a net revenue of Rs. 59,181.

The soil of the Purguna is divided into three kinds—black, red, and white ; of which black predominates.

Of the villages, 28 are on the river, and 26 on the plain.

The total population amounts to 50,162 souls.

6th.—The Purguna of Alte is also composed of open country. It extends east and west 12 miles, and north and south 15 miles, and contains, independent of the Mankuree freehold estate, 31,420 beegas of productive land.

This amount is partitioned among 42 towns and villages. Of these, the largest possesses 1,666 beegas, and the smallest 275 beegas. The first pays an annual revenue of Rs. 17,174, and the other Rs. 1,953.

Of the 42 villages, 16 are held in Inam. The entire alienated land in the district amounts to 23,871 beegas, and the remaining amount of Government land, 7,549 beegas, produces a net revenue of Rs. 54,323.

The soil of the Purguna is divided into three kinds—black, red, and rocky; of which red predominates.

Of the villages, 15 are situated on the river, and 27 on the plain.

The total population amounts to 43,548 souls.

The annexed statement exhibits in detail the extent of land, with the proceeds in cash of the Petas as well as the estates belonging to Sirdars of the 1st Class in the Kolhapoor State.

AREA.—The plain of Kolhapoor is estimated to be 1,797 feet above the level of the sea, and the summits of the separating ridges are estimated to rise above the plain for a height varying from 600 to 1,200 feet.

The whole length of the principality, constituting the greatest extent from north to south, is 80 miles, the greatest breadth from east to west is 68 miles, but the two small districts of Roybag and Toregul are situated beyond the natural boundary, and the total area may be computed roughly at 3,184 square miles, or 2,610,880 Kolhapoor beegas.

Of this amount, 480,566 beegas are cultivated, being about one-fifth of the entire surface; the remaining four-fifths are composed of rocky sterile table-land, barely sufficient for the growth of a most inferior description of grass, with the exception of a portion of about 400 square miles, situated in the Konkun Ghaut Matha, which is at present covered with dense jungles of bamboo and forest trees.

The Kolhapoor beega contains 3,800 square yards.

GEOLOGICAL STRUCTURE.—Kolhapoor forms a portion of the great overlying trap formation of the Deccan.

From the absence of stratified rocks, it is not an interesting field for geologists, and its minerals are confined to the products of igneous action, and their included minerals. The metals are not met with, except near the borders of the trap and stratified rocks. A portion of the sandstone formation, which is more clearly defined in ridges towards Belgaum, as shown in Sketch No. 1, is included in the southern portions of the district, and this is the diamond sandstone, which is found at Cuddapah and other places where diamonds are met with in the Madras territory. From the absence of fossils, its age has not been ascertained, but it is probably of the most ancient formation, being found generally among primary rocks.

It is interstratified with clay and schistose rocks: it invariably forms the upper strata of hills, the valleys between the hills being composed of limestone and schistose rocks, though in many places much altered, being in general converted into quartz rock, and characterised, particularly in the Punala and Bhodurgur districts, by the great abundance of ores of iron which occur on points where the sandstone is altered by an igneous rock.

Sketch No. 1

Sandstone hills in parallel Saddles and Troughs

Sketch No 2

From the analogies between the Ghauts and the Ural mountains, copper was expected in the limestone, and it has been discovered below the Phoon-da Ghaut, diffused in coatings through a slaty limestone. The portion exposed contains it very minutely, and, unfortunately, the limestone in the valleys is covered with black soil, and no good sections are exposed, by which veins of the metal, if it be so concentrated, can be detected. The limestone is inferior to the sandstone, and is only developed at the foot of the Ghauts. The torrents carry down a great quantity of black sand, which contains iron.

In accordance with the features peculiar to the zone of elevation of the Ghauts and the Malayan peninsula, that sandstone conglomerates, and almost every other kind of rock, have undergone a ferruginating process,—the clay-schist which is strongly developed in the broken land in the valley of the Punch-gunga has been metamorphosed by igneous agency into iron ore; and when the trap is in the immediate vicinity, the lower beds of limestone are dark coloured quartzose. In the basaltic districts amygdaloidal trap is found with an earthy base, embedding three varieties of zeolites: pervaded in some places by seams of yellow ochre, probably a decomposition of hornblende rock, in other places by seams of white earth, a decomposed felspathic rock which might be used in the manufacture of porcelain, and in other places by indurated ferruginous clay.

It is not unlikely that gold may be found in the streams where the schists abound, and also that some portions of the trap porphyry has gold disseminated in it, and that both the common iron sand and grains of gold are derived from the decomposition or wearing away of trap rocks.

The English travellers Fitch and Newberry speak of Belgaum as a great diamond mart in 1583; but there is no legend even remaining of diamonds having been found among the sandstone formation of this tract.

A singular arrangement of clay is observable at a bend of the river Punch-gunga, close to the town, perhaps occasioned by alterations in the course of the river, by upheaving of the adjacent country.

This clay is found in octagonal columns, arranged perpendicularly, and separated by crystalline walls, which crystalline action must have been simultaneous with the drying of the clay. The clay was evidently deposited from water, as the upper portion is fine, and it gradually becomes more and more gross inferiorly, until below it is mixed with stones and boulders set in the same clay, as shown in Sketch No. 2.

Above and overlying this strata is the trap rock, which is burst through in many places, allowing the trees which are nourished in the clay soil to penetrate its layers.

This layer is not enriched with any organic remains, and was probably formed under some extraordinary convulsion of nature, or heat and pressure, and considerable alterations of elevation seem to have been necessary to its development.

The general geological formation of the country has, no doubt, exercised a peculiar influence on the character of the people.

Here we see nature exhibiting a castellane appearance upon every eminence, a stronghold upon every hill, as if inviting the inhabitants to depend upon themselves, instead of upon the sovereign's support, and encouraging in each petty chieftain that spirit of independence which is so striking a characteristic of the Natives of the Southern Muratha Country.

Iron ore is often met with on the surface of the ground, in irregular masses, intermingled with other stones, but is chiefly obtained by sinking a shaft to the vein.

The vein is generally hit upon at a depth of from two to ten feet from the surface, embedded in a thick layer of ferruginous clay mixed with a composite stone called by the Natives Jambla, probably on account of its conglomerate appearance, the nodules in which appear to have had a concretionary origin.

The stratum of ore seldom exceeds eight or ten inches in thickness, and the bed, which is seldom wider than 30 or 40 feet, would appear to dip from north to south at an angle of about 12° .

NATURAL ASPECT.—The eastern and more fertile portion of the State, called Desh, which in the season is covered with most luxuriant crops of jowaree, wheat, and tobacco, but greatly destitute of all timber, with the exception of the mango and babool, comprises the mouths of the different valleys into which the country is divided by the rivers Warna, Punchgunga, Doodgunga, and Hurnkasee, together with a part of the great level Deccan plain through which these tributary streams continue their course to join the river Krishna, which here flows north and south, and forms a portion of the eastern boundary of the principality.

The great Kolhapoor valleys, which are slightly undulating, are separated from each other by bare continuous ridges of broken table-land, running in low spurs at an elevation of about 950 feet above the plain, and in an easterly direction from the Sahyadree Ghauts, and the edges of these valleys are again intersected by numerous small tributary nullas leading into the river which runs in the centre of each valley.

The banks of the rivers are plentifully studded with green babool trees, and the valley itself is dotted with villages, the sites of which, about three miles apart of each other, are easily distinguished by the luxuriance of the vegetation, and the large trees in their immediate vicinity, which line the lanes, and afford shade to work the numerous wells.

From the village, as a centre, the cultivation extends around, gradually decreasing in value, from the rich sugar and garden land near the walls, to the poor crops of Sawa which are planted on the confines of the neighbouring height, or to the very verge of the small strip of jungle which generally separates the localities.

From their gorge, for a distance of about 30 miles, the individual valleys are several miles in breadth, well cultivated, and bounded by eminences, many of

fantastic shape, but principally table-shaped, or conical, and whose summits have been in many instances converted into strongholds. Grain of every description is raised in great luxuriance, and even the hill-sides, when broken and built up into a succession of minute terraces, and cultivated, afford plentiful crops, especially of excellent rice, whilst groves of mangoes, tamarinds, and peepuls are to be seen in every direction.

As they enter the hilly country, which extends for 35 miles from the Ghauts, and is called Konkun Ghaut Matha, the courses of the rivers become more rapid and tortuous. The hills also rise more abruptly, and become covered with wood, increasing in size from the low babool to the towering jack-tree. Large tracts of country are found clothed with coarse grass, and the cultivation, which is chiefly confined to rice, and the inferior sorts of grain, is only to be seen on the banks of the rivers, and immediately around the rude hamlets, which are generally erected by the wild inhabitants under the deepest shade of the largest and thickest trees.

The Kolhapoor Konkun is similar in its features to the other portions of that rugged tract. The country in general is wild and picturesque, and the vegetation most luxuriant.

SOIL.—The soil may be classed into four sorts—"Kalee," black; "Tambool," red; "Mulee," or "Malwa," the orchard and rice land; and "Kharee," or "Pandur," white.

The first two are considered the most valuable, and each sort is divided into three varieties, which are again sub-divided into various degrees of quality, according to productive power or locality, and which altogether involve a very complicated arrangement of 218 different rates of assessment.

Portions of each description are distributed over every Purguna and dependency, the superior sorts decreasing in extent in the hilly tract near the Ghauts.

The best black land is found near the rivers, and extends to an average depth of 5 feet throughout the bottoms of the valleys, to the sides or slopes of the hills, which are chiefly of a ferruginous formation: frequent wide seams of lime, however, pervade this red mass, and kunkur is spread for miles in small globules over the surface, especially in the Purgunas of Kolhapoor, Punala, and Sherole.

A stiff, light-coloured soil, which is composed of decayed clay-slate, and is very retentive of moisture, and which is found equally on the hill-sides and in the smaller valleys, more particularly in the Purgunas of Punala and Bhoo-durgur, and the dependencies of Vishalgur and Bowra, is chiefly valued for the production of rice.

Whilst from some portions of the black and red soils two and three crops can be annually raised with advantage, in the hilly districts the land is allowed to remain fallow from one to five years; but generally throughout the country the superior portions of soil have been already appropriated, and are under cultivation, and the only waste land remaining of any extent is to be found

among the western hills, where the climate is by no means healthy, and where the present natural growth of low jungle and coarse grass does not betoken any superior quality or depth of soil.

The different soils, arranged under the following three heads, may be estimated throughout the State in the following proportions :—

1st, 31.9 ; 2nd, 22.4 ; and 3rd, 45.7 per cent.

ATMOSPHERE AND CLIMATE.

The climate of the Kolhapoor plain, which is raised at an elevation of 1,790 feet above the sea, is temperate, like that of other portions of the Deccan.

Towards the Western Ghauts, which are covered with wood, and more thoroughly saturated during the monsoon, the air is always cooler than in the plains, where, during the months of April, May, and June, hot suffocating easterly winds prevail. The entire district, however, is partially under the

influence of a sea breeze, which commences in the afternoon, and lasts till about 8 p. m., and heavy fogs frequently hang in the valleys and over the rivers during the cold season.

By the annexed return of the range of the thermometer and register of the pluviometer at Kolhapoor, the average temperature at the station during the last five years has been $72\frac{1}{2}^{\circ}$, and the fall of rain on the plains 30 inches and 18 cents.

This supply, which is sufficient for the crops, is generally diffused over the monsoon period from May till November, seldom interfering with the work of cultivation, and presenting a succession of periodical showers rather than the continued down-pouring exhibited in the following return of the hilly districts towards the Ghauts :—

Return of Fall of Rain in the Hilly Districts of Kolhapoor.

| Districts. | 1848. | | 1849. | | 1850. | | 1851. | |
|--------------------|-------|------|-------|------|-------|------|-------|------|
| | Ins. | cts. | Ins. | cts. | Ins. | cts. | Ins. | cts. |
| Bowra | ... | ... | 281 | 51 | 294 | 90 | 253 | 30 |
| Bloodurgur | 67 | 60 | 109 | 16 | 63 | 90 | 56 | 75 |
| Punala | 43 | 40 | 73 | 6 | 64 | 64 | 46 | 39 |
| Vishalgur | 89 | 25 | 77 | 0 | 46 | 0 | 53 | 70 |

From its situation opposite a gap in the line of Ghauts, the city of Kolhapoor is favoured with a strong sea breeze, and the nights are, in consequence, invariably cool.

Meteors, igneous and luminous, are of frequent occurrence, and violent storms of thunder, lightning and wind are unusually prevalent, not only at the commencement of the south-west monsoon, but occasionally at other periods. These storms appear to travel round the horizon, often commencing and disappearing at the same point, and not unfrequently making the circuit twice ; and although at times productive of disastrous effects, they exercise a beneficial influence on the healthiness of the climate.

Numerous hill forts rise to a considerable height above the adjoining plain, and their summits, elevated nearly 3,000 feet above the level of the sea, afford a pleasant retreat from the hot winds prevalent in April and May : the hill fort of Punala more particularly, being in the immediate vicinity of the station of Kolhapoor, has been selected as a sanatorium ; and the diminished temperature and bracing qualities of the air, with the supply of pure water, have proved highly beneficial in restoring health.

PRODUCTIONS.

Kolhapoor is, strictly speaking, an agricultural country, and all the Indian grains, and most of the fruits and vegetables, are raised in the principality.

Rice and Nachnee, however, may be accounted the staple of the tract of the Konkun Ghaut Matha adjacent to the western range, which is most subject to heavy rain, and contains the greatest portion of rich red soil; and the Jowaree in the valleys and Desh, where the season for husbandry commences later, and where the moisture is less abundant.

The remaining productions of the country are—

|------------------|-------------------|
| Wool. | Hides. |
| Butter and ghee. | Horns. |
| Honey and wax. | Timber. |
| Gums. | Medicinal plants. |
| Coloured earth. | Farm stock. |
| Iron. | |

A fine description of basaltic trap, used for building purposes, and various roots which grow spontaneously among the Ghauts, and are used as food by the inhabitants, both above and below the Sahyadree range.

The entire average estimated produce of the land in maunds of 64 seers, and its value, is as follows:—

| Description. | Produce. | Value. | | |
|-------------------------------------|-----------|-----------|----|----|
| | Maunds. | Rs. | a. | p. |
| Rice | 1,002,570 | 14,50,906 | 8 | 0 |
| Jowaree | 626,904 | 8,35,873 | 0 | 0 |
| Nachnee and inferior grains | 362,561 | 3,62,516 | 0 | 0 |
| Wheat | 109,510 | 2,31,678 | 0 | 0 |
| Gram | 128,393 | 2,31,678 | 0 | 0 |
| Toor | 54,308 | 82,757 | 0 | 0 |
| Tobacco and cotton | 36,960 | 63,976 | 0 | 0 |
| Sugar-cane | 343,680 | 3,43,680 | 0 | 0 |
| Vegetables | | 2,31,678 | 0 | 0 |
| Total. | 2,664,886 | 38,31,742 | 8 | 0 |

This amount of grain, therefore, together with the amount of excess of 30,000 maunds imported from foreign countries, would provide, at the rate of upwards of 4 maunds annually, or nearly $\frac{3}{4}$ seer per diem, a sufficiency for the daily food of each individual of the entire population.

The land productions of Kolhapoor are inserted in the following Tables No. 1 and No. 2, containing a list of dry and garden crops, and showing the Murathee, English, and scientific names of the produce, the season of planting, and the number of months taken to reach maturity:—

No. 1.

RICE.—As an agricultural country, Kolhapoor is entitled to a high place among the territories in the Deccan. Its agricultural products are very varied, and each in its kind good.

Rice of many varieties is cultivated throughout the territory, but more especially in the Ghaut Matha districts, which are under the more immediate influence of the heavy monsoon rain.

The crop is raised in the rich valleys, and on the slopes of the hill-sides, where the cultivation is carried far up the ascent in a succession of well-defined terraces, artificially prepared, with embankments to retain the soil and regulate the supply of water.

The rice crops of Kolhapoor form nearly one-third of the entire produce of the country. The grain is highly esteemed by the Natives, and considered to be the best in the Bombay Presidency; more especially two varieties, one of which is grown in the district of Azra, and the other, the jeergah, or sometimes, from the colour of the husk, called kalla bhat, which is thought to throw out, when cooked, a most delicious odour.

About 838,310 maunds of rice are annually raised from an extent of about 41,915 beegas, and the following nineteen varieties are usually cultivated, and are arranged below according to their relative price in the market:—

- | | |
|----------------|--------------------|
| 1. Kalee sal. | 11. Chunsum. |
| 2. Tamsal. | 12. Mhasud. |
| 3. Jeergah. | 13. Joondhul bhat. |
| 4. Ambe mohur. | 14. Pandra bhat. |
| 5. Bhogul. | 15. Jog. |
| 6. Wansea. | 16. Wurungul. |
| 7. Dodkee. | 17. Sawa. |
| 8. Pudowlee. | 18. Gool Danene. |
| 9. Mahoon. | 19. Khavar. |
| 10. Dalad. | |

The rice, after having been cleaned from the husk and straw, is invariably stored in large wicker baskets (tutteah), and placed under the house-roof.

The annexed table gives the expense of cultivation, and average profit on a beega of rice land.

COTTON.—Cotton is grown only in the eastern part of the territory, forming generally about one-sixteenth of the produce of the village in which it is cultivated.

Besides the fibre it yields, the seeds are given as food to cattle, the leaves to sheep and goats, and the dry stalks are used as firewood.

A sufficiency only is raised to supply the internal annual consumption, which amounts to about 297 pukka candies, the net produce of 8,302 beegas; the average price per candy is Rs. 50.

Hitherto the cotton, which is of an average description, has been cleaned by the Native kuna, but American gins are now erected in various localities, and

an experiment is being made to introduce the New Orleans plant. The amount of waste land, however, is limited, and the ryots are averse to relinquish their present cultivation of more profitable crops. The annexed return gives in detail the extent of land cultivated, and the general annual proceeds, together with the estimated profit on one beega planted with the two descriptions of cotton.

OIL PLANTS.—Of the seeds which produce oil the most common are til and kurda, which are both used for eating and burning, and bhooemoog, which is used entirely for lights; the remaining species for eating are:—

- | | |
|-----------|-----------|
| 1. Til. | 3. Korta. |
| 2. Kurda. | 4. Juwus. |

For lights:

- | | |
|---------------|----------------|
| 1. Til. | 5. Juwus. |
| 2. Kurda. | 6. Castor oil. |
| 3. Bhooemoog. | 7. Ambada. |
| 4. Korta. | |

For perfumes: Til.

For medicines:

- | | |
|--------------|-------------------------|
| 1. Kangonee. | 3. Castor oil. |
| 2. Kuruja. | 4. Mohuree, or mustard. |

TOBACCO.—Tobacco of the finest description is grown in small quantities in the villages near the river Krishna, of similar quality to the far-famed Meerut tobacco, which is deservedly considered to be the best in the Deccan. The crop, from the peculiar locality, is uncertain, and only about 1,551 candies raised in Kolhapoor, valued at Rs. 49,126.

HEMP.—As the cultivation of hemp is supposed to enrich the soil, generally sown in large quantities every alternate year in some of the required for sugar-cane, or for other rich produce. It is also sometimes along with the jowaree crops.

The plants attain their full size of about 4 feet in height in three months; they are then cut down, and the pods separated from the stalks, which are kept soaking in water for about a week, for the purpose of decomposition. Afterwards they are taken out, and exposed to the sun, and the process of securing the fibrous matter is immediately commenced.

This material is tied into bundles, which are afterwards soaked in water, and beaten, to effect a partial separation of the fibres, which are finally twisted into long smooth threads by means of an instrument called chattee.

Hemp is a staple of great demand in the Kolhapoor market, and used for preparing gunny-bags and twine: about 3,068 candies, valued at Rs. 68,295, are annually raised in Kolhapoor.

INFERIOR GRAINS.—The inferior grains of nachnee, rala, varia, and hurik, contain little aliment. One description, hurik, attains a highly intoxicating power when kept for any time under ground; and all these grains are

considered injurious to health if taken unmixed with other substances. They are, however, easily raised among the ashes of burnt branches, and on hill-sides where there is not sufficient nourishment for other cultivation.

LEGUMINOUS PLANTS.—A great portion of the pulse family, the pea, gram, toor, moog, ooid, mutukia, paoté, ulsoonda, kooltee, chuoli, and musoor, are raised on the intervening ridges of watered land. Toor, and the common field pea, however, are raised in fields as a winter crop. The grain of the pulse is generally in the first instance well soaked in water, then thoroughly dried in the sun, and afterwards split in a common hand-mill; the pods and bran are given to cattle. The pods of boycha, chuoli, hutga, and khursamlee or abayee, and all kinds of ghewda (beans), are sometimes used green as vegetables.

VEGETABLES.—The various common Indian vegetables are good, abundant, and cheap, and among them may be especially mentioned the shrawun ghewda, a species of bean, and the brinjal. Potatoes and all European vegetables have succeeded well in private gardens, but the bazars have been hitherto supplied from Belgaum and the Mahableshwur Hills.

FRUIT.—The cultivation of fruit has been greatly neglected. The Kolhapoor mango requires to be sweetened with sugar, and all descriptions are of a very indifferent quality, with the exception of the plantain and jack, which grow to a large size. The soil and climate, however, are well adapted for the cultivation of garden and orchard produce, and the experiments which have been made in grapes, oranges, and strawberries, have proved eminently successful.

COFFEE.—The coffee plant has been very partially introduced into Kolhapoor. The plant thrives luxuriantly, particularly on the more elevated grounds; and the berry, which is of an excellent flavour, obtains a ready sale in the bazar at 6 lbs. per rupee.

FLOWERS.—A general taste prevails for flowers throughout the country. Roses are in every village, and were introduced about sixty years ago; the pach is very abundant, from which the famous essence of pachoolie is extracted, whilst the following plants are common in every garden:—

- | | |
|--------------------------------------------------|-----------------------------------------------|
| 1. Sewtee (<i>Rosa glandulifera</i>). | 11. Murwa (sweet marjorum). |
| 2. Mogree (<i>Arabic jessamine</i>). | 12. Downa. |
| 3. Jae (a kind of ditto). | 13. Pach. |
| 4. Joee (ditto). | 14. Goolchuboo (<i>Tuberose</i>). |
| 5. Rose. | 15. White chapa (<i>Michelia champaca</i>). |
| 6. Suda goolab (a kind of rose). | 16. Nagchapa. |
| 7. Son chapa (<i>Champaca</i>). | 17. Muddunban (a kind of jessamine). |
| 8. Bukoolie (<i>Mimusops elengi</i>). | 18. Motia (ditto). |
| 9. Duwun sewtee (<i>Crysanthemum Indicum</i>). | 19. Newalee (ditto). |
| 10. Jessamine. | 20. Pareejatuk (the coral flower). |

SUGAR-CANE.—The Kolhapoor sugar-cane is of good quality, and yields an abundant quantity of juice. There are four varieties:—

- | | |
|----------------------------|-------------------------------|
| 1. The white or bhoga oos. | 3. The striped or phonda oos. |
| 2. The red or kala oos. | 4. The rattan or wurrah oos. |

Of these the three first require irrigation for eight months in the year, four months before and four months after the monsoon.

The wurrah is cultivated on the banks of rivers, and irrigated only once, at the time of sowing; at other times it is supposed that sufficient moisture is received from the air through the leaves. The wurrah is sometimes mixed amongst the other varieties, although sparingly, in consequence of the small quantity of contained juice.

On an average, the produce of a Kolhapoor beega may be taken at 120 maunds of goor cakes, and the value of the annual produce of the 2,864 beegas under cultivation, consisting of 17,184 candies, at the present rate of Rs. 20 per candy, may be estimated at Rs. 3,43,680.

There is a great extent of rich soil, well adapted for the cultivation of this valuable product, but in many places water is scarce, and as a rotation in this crop is absolutely necessary, and always upheld, the means of a common ryot are hardly sufficient for the consequent expense and delay; neither do the ryots engaged in this peculiar cultivation appear to be richer than their neighbours.

The maturity of the cane is indicated by the skin becoming smooth and brittle, the juice sweet and glutinous, and the cane heavy.

The cost and profit of cultivating a beega of sugar-cane may be estimated as follows:—

Cost of Cultivation.

To plough a beega of sugar-cane land takes fifteen days, and the expense would be—

| | | | | | |
|-----------------------------------------------------------------------------------------------------------------------|-----|----|----|----|---|
| Feeding of 10 bullocks for 15 days, at 150 bundles per day, or 2,250 bundles for 15 days, at Rs. 3 per 1,000 | Rs. | 6 | 12 | 0 | |
| Feed and pay to 3 men for 15 days would be— | | | | | |
| 15 pylees of grain (nachnee or jondla) | Rs. | 1 | 8 | 0 | |
| 1½ pylee of dhal | | 0 | 3 | 0 | |
| Salt | | 0 | 1 | 0 | |
| Chillies | | 0 | 3 | 0 | |
| Musalla | | 0 | 3 | 0 | |
| In ready cash for 15 days, at Rs. 12 per annum .. | | 1 | 8 | 0 | |
| | | | 3 | 10 | 0 |
| 30 cart loads of manure to be purchased, with cost of car- rying to the field | | 3 | 8 | 0 | |
| Sheep's manure | | 7 | 0 | 0 | |
| Feed of 8 bullocks for 2 days in preparing the ground.. | | 0 | 11 | 6 | |
| | | | | | |
| Carried over,.... | Rs. | 21 | 9 | 6 | |

| | | | |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----|-----|
| Brought over....Rs. | 21 | 9 | 6 |
| Cost of labour of 2 men at the above rate, to prepare ground .. | 0 | 2 | 5 |
| 12,000 pieces of sugar-cane of about 2 feet long, for planting, at Rs. 1½ per 1,000 | 18 | 0 | 0 |
| Feeding of 2 bullocks for 8 months, for drawing the mote at the well, at the above rate | 21 | 9 | 7 |
| Cost of wages to 2 men in food and pay for 8 months, to irrigate the field, at the above rate | 38 | 10 | 8 |
| 2 days' ploughing again: cost of feed to 2 bullocks for 2 days.. | 0 | 2 | 10 |
| After the sugar-cane has grown to about 6 or 8 inches, a small description of plough is used, drawn by 2 bullocks, to plough up the ground between the rows: cost of labour of 2 men for 2 days. | 0 | 2 | 5 |
| 4 weedings, at 10 men per day, 40 men, at 2 seers of nachnee to each, valued at | 3 | 0 | 0 |
| Kullow, or harrowing for 2 days.. .. . | 0 | 5 | 6 |
| The cost of the labour of 20 men for 1 day for fencing in the field. | 1 | 8 | 2 |
| <hr/> | | | |
| The total expense of planting a field of sugar-cane, and taking care of the same till it reaches maturity | Rs. | 105 | 3 1 |

Expense of making Jagree.

| | | | |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|------|
| To make jagree from one beega of sugar-cane will take 10 days. | | | |
| Hire to 3 men, at 4 annas per day, for 10 days. These are the jagree boilers. The man attending to the fire, and the man introducing the pieces of sugar-cane into the mill | Rs. | 7 | 8 0 |
| Hire to other 13 men for 10 days, to assist in bringing the sugar- cane, driving the bullocks, &c. for 10 days | | 17 | 8 0 |
| Oil for lights, and oiling the mill.. .. . | | 2 | 0 0 |
| Hire for a kahil, or iron boiler | | 5 | 0 0 |
| Hire to 4 men for 1 day, in erecting the mill | | 0 | 5 5 |
| Fuel for boiling the juice | | 15 | 0 0 |
| Earthenware pots, &c. | | 0 | 8 0 |
| <hr/> | | | |
| Total expense in making jagree.. .. . | Rs. | 47 | 13 5 |

Share of the Prime Cost of the Cultivator's Stock.

| | | | |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---|------|
| Portion of the prime cost of 10 bullocks, valued at Rs. 125. These bullocks are estimated to be serviceable for 10 years, and their labour on 1 beega of sugar-cane field being required for about 1 month, will be | Rs. | 1 | 0 8 |
| Portion of the prime cost of 2 bullocks for the mote, valued at Rs. 50. These bullocks are estimated to be serviceable for 6 years, and their labour at the mote being required for 8 months in the year, would be.. .. . | | 5 | 8 10 |

Carried over....Rs. 159 10 0

| | | | | |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----|----|---|
| Brought over.... | Rs. | 159 | 10 | 0 |
| Portion of the prime cost of a mote, ropes, &c. for 1 year .. | | 1 | 13 | 4 |
| Portion of the prime cost of a grinding sugar-mill, valued at Rs. 10, estimated to be serviceable for 5 years.. .. | | 2 | 0 | 0 |
| Portion of the cost of agricultural implements, valued at Rs. 6-8-0, and estimated to last 5 years | | 0 | 1 | 5 |
| To dig an ordinary well to supply water for 1 beega of sugar-cane will, on an average, cost about Rs. 150, the interest of which per annum will be at 9 per cent. Rs. 13-8-0; from which sum deduct one-fourth, which the Koonbee makes by vegetables, onions, &c. irrigated by the well, three-fourths, or Rs. 10-2-0 will remain to be added to the cost of a field of sugar-cane per annum.. .. | | | | |
| | | 10 | 2 | 0 |
| Tax for 1 beega | | 20 | 0 | 0 |

Total of cost.. Rs. 193 10 9

Profit.

A beega of best sugar-cane will produce about 11 candies of jagree or raw sugar : of this, allowing 1 candy for byta, and other distributions amongst Hukdars, passengers, beggars, &c. will leave 10 candies, which on an average may be estimated to be worth

| | | | | |
|--------------------------------------------------------------------|-----|-----|---|---|
| to be worth | Rs. | 200 | 0 | 0 |
| 12,000 pieces of sugar-cane for the next year's planting .. | | 18 | 0 | 0 |
| The leaves of the sugar-cane used for thatching houses, valued at. | | 5 | 0 | 0 |

| 9 | Ditto of Vishalgur .. . | 14 | 84 | 1,680 |
| 10 | Ditto of Inchulkurunjee. | 128 | 768 | 15,360 |
| | Total. | 2,864 | 17,184 | 3,43,680 |

WOOL.—The quantity of wool produced in the different petas of the Kolhapoor State may be estimated as follows:—

There are in round numbers—

| | |
|--------------------------------------------------------------------------|---------------|
| In the Kurweer peta | 25,000 sheep. |
| In the Alte ditto | 20,000 „ |
| In the Punala ditto | 10,000 „ |
| In the Sherole ditto | 30,000 „ |
| In the Bhoodurgur ditto | 5,000 „ |
| In the Gur Ingluz ditto | 25,000 „ |
| In the different villages held by Jagcerdars, Inam- dars, &c. | 30,000 „ |

Total number of sheep.... 145,000

The average quantity of wool obtained from one sheep amounts to about half a pound, and as the number of sheep kept continually as stock is returned at 145,000, and the number for annual consumption at 107,875, the aggregate produce of wool obtainable would amount to 198,437 pukka seers, which is valued at Rs. 33,073.

About 100 candies of wool are also imported into Kolhapoor, which, together with the quantity produced, are consumed in the manufacture of cumblees, numdas, chap for country saddles, and cachola, a kind of waistcoat used by the cultivators in the rains towards the Konkun.

The sheep is shorn twice a year, generally when the wool attains the length of six inches.

The best description is produced in the petas of Gur Ingluz and Sherole, and the estate of Toregul. It is generally black and soft, and is called saole.

The supply of cumblees manufactured from this Kolhapoor staple is sufficient to afford a fresh cumblee once in five years to the 500,000 inhabitants who absolutely require the article.

BUTTER AND GHEE.—Butter is sold according to weight, the average cost being at the rate of about 6 seers (of eighty rupees weight) for Rs. 1.

Ghee is made by clarifying the butter, and the process is very simple. The butter is in the first instance melted in a copper pot, and exposed to a considerable degree of heat, to cause a rapid evaporation of the water. After the water has evaporated, the pot is taken off the fire, and a little salt and a few drops of water are added. The pot is then covered, and allowed to cool, and a few betel or turmeric leaves are afterwards thrown in, to remove the rancid smell.

The butter is made chiefly in the forests of the Punala and Bhodurgur petas, and the estates of Bowra and Vishalgur, and in these locations large herds of cows and buffaloes are kept by Dhungurs, a caste of people who have no fixed habitation, but wander from hill to hill, wherever water and forage are most plentiful.

The Dhungurs seldom part with their milk, but make it all into butter, which is sold to a class of Banians called Gowarees, who clarify the article, and export it when converted into ghee, to Vingorla, Malwun, Rajapoor, Rutnâgeeree, and Goa.

The ghee made from the butter procured from the Dhungurs is seldom purchased or used in Kolhapoor, in consequence of the very offensive smell which proceeds from the butter being kept until putrid, in pits under ground, before being boiled down.

The seer of sixty rupees weight is used in their butter transactions by the Dhungurs, and the rates vary from 10 to 12 seers per rupee. Three-fourths of a seer of ghee is obtained from a seer of butter, and the article is supplied to the Kolhapoor bazars from the adjacent villages, where the ryots generally keep two or three buffaloes and cows for the purpose.

The ootum, or 1st sort ghee, is produced in the towns of Kagul, Sherole, Hoopree, Alte, Rookdee, Kurweer, &c., and costs Rs. 4-4-0 per maund.

The mudhium, or 2nd sort ghee, is produced in Kapsee, Gur Ingluz, &c., and costs Rs. 3-12-0 per maund.

The kunisht, or 3rd sort ghee, is produced at Bowra, Mulkapoor, Bhodurgur, Punala, &c. It costs Rs. 2-12-0 per maund, and owes the inferiority in quality to the bad pasture obtainable in the countries adjoining the Ghauts.

In the Kolhapoor bazar ghee is sold at the rate of about $3\frac{1}{2}$ seers of eighty rupees weight for Rs. 1, and the wholesale price charged by the Banians is about Rs. 6 for the maund of 12 pukka seers of eighty rupees weight, and at this rate the profit upon every rupee may be estimated at 4 annas.

Consumption.—The quantity of ghee consumed during the year by the 30,000 individuals (Bramins, Muratha Sirdars, Mankurees, Soukars, Goozurs, &c.) who can afford this luxury, and who take on an average about a tola for each individual per day, amounts to 270 candies per annum; and this, calculated at Rs. 80 per candy, would show a value of Rs. 21,600. A further portion of 105 candies of ghee, valued at Rs. 8,400, is consumed by the families of other castes, showing altogether the total value of consumption at Rs. 30,000.

Of this sum, the amount of value of about 225 candies of ghee, which is made in the Kolhapoor State, is Rs. 18,000; and deducting the value of the quantity sold below the Ghauts for sale, being about $37\frac{1}{2}$ candies, at Rs. 84 per candy, the share of Kolhapoor produce consumed in the country would amount to Rs. 15,000. The remaining portion of $187\frac{1}{2}$ candies is imported from the surrounding Putwurdhun ilakas, Sunkeshwur, Moodhole, Vizapoor, Bagulkote, Pundhurpoor, &c., and is valued at Rs. 15,000.

When old, the ghee is used as ointment for healing wounds, and there is a small covered tank in the fort of Puwungur where the article has been stored up for the last century, and to which eager application is made on the occurrence of any severe bodily injury.

HONEY AND WAX.—Honey and wax are principally procured in the forests and Ghauts, in the Bhodurgur and Punala petas, and the estates of Bowra and Vishalgur.

The following are the four different kinds of bees from which honey is obtained: the kalbee or agea; the sataroo; the powai; and the kantaloo.

The combs of the kalbee or agea bees are found on the faces of the rocky cliffs, on the natural scarps of precipices, and hanging also from the boughs of large trees; and a single comb from this description of bee is often obtained containing 20 seers of honey.

The vocation of taking the combs is exceedingly dangerous, as the precipitous scarp on which they are fixed is often many hundred feet in perpendicular depth, and the man must be lowered down along the rocky face in a cradle slung upon a single rope to wherever the bees have located. When opposite the spot, an oscillating motion is given to the rope from above, so as to throw the cradle inwards towards the rock, and enable the hunter to reach and cut off the comb. The men are provided with a bundle of chips of the bherla or soor mad, which are kept on fire, and the smoke effectually keeps the bees at a distance, especially as night is the time always taken advantage of for the attack.

The comb of the sataroo bees is found in the clefts of rocks, and on small trees, and the quantity of honey obtained from one hive is generally about 2 seers.

The comb of the powai is found in the cavities of large rocks, and in the hollows of decayed trees. The best honey is obtained from this bee, and when kept for any length of time, it invariably crystallizes. The quantity of honey obtained from one hive is generally about half a seer.

The combs of the kantaloo bees are found in thorny bushes, and small trees, and the cells are always formed round a single branch, and not hanging from it, as with the other kinds of bees.

The greatest quantity of honey in these districts is collected in the month of April, when the dhaetee tree (*Grislea tomentosa*) and karwee are in blossom. Honey is also found in the month of August after the cessation of the rains, but the honey obtained at that time is not so good, and, being watery, will not keep for any length of time.

Honey and wax smuggled by the villagers are exchanged by them with the Banians for oil, and these articles are generally brought for sale to all the market towns of the peta.

The contract for the sale of honey and wax is annually farmed at an average sum of Rs. 20, and the following quantities are disposed of annually :—

Honey 11 candies, at Rs. 60 to 80 per candy.

Wax 7 ditto, at Rs. 160 to Rs. 200 per candy. Of this 3 candies of honey and 2 candies of wax are exported to the eastward, and the remainder is consumed in the State.

Murathas, Koonbees, and Kolees are employed in extracting the honey, and preparing the wax, which is boiled with a small portion of turmeric to increase the brightness of the colour.

GUM.—Gums are procured from the following trees : babool, mango, khair, dhowree, shewga, and sowree.

Although the babool produces the best description, and largest amount in proportion, the exudation from the khair tree is much valued by the Natives, in consequence of its supposed medicinal qualities. This gum, when in a pure state, is sold at from Rs. 4 to Rs. 5 per maund, whilst the gum from the babool and other trees fetches in the market only about Rs. 1½ to Rs. 2 per maund.

The average annual amount of gums sold throughout the State of all descriptions is estimated to be 200 maunds, of the value of Rs. 300.

COLOURED EARTHS.—The coloured earths, yellow, white, and red, which are a decomposition of the hornblende and felspathic rocks, or indurated ferruginous clay, are in general use throughout the country for rough-painting the house-walls. They are of little value, however, in the market, and only used by those who cannot afford to purchase the better descriptions of foreign pigment.

IRON.—Iron ore of three varieties—boregale, sheelga, and tatha—exists throughout the Kolhapoor territory, but principally in the districts of Vishalgur, Punala, and Kolhapoor proper, adjoining the abutments from the great Western Ghauts, and is generally found close to the surface of the ground.

The process of extracting the metal, though simple, is tedious and expensive, the ore being in the first instance dug out with shovels and crow-bars from the pit, which is never excavated beyond eight or ten feet, and is then deserted for another opening.

Carried in wicker baskets to the furnace, a simple hole in the ground, lined with moistened clay and powdered flint, the lumps of ore are pulverized by large hammers, and the powder is submitted to the influence of a powerful fire.

Charcoal is invariably used during the process of melting, the flames being kept strongly ignited by means of bellows worked by the hands of the labourers, and the quantity of metal produced varies from 33 to 66 per cent. of the weight submitted to the action of the fire.

In extracting a ton of iron the labour of 56 men is required for two days, and an actual cost incurred of about Rs. 28. The market price is from Rs. 37 to Rs. 42 per ton, but the Native metal is hard, brittle, and exceedingly laborious to work.

The number of furnaces throughout the principality amounts to 30, producing annually about 225 tons of metal, and affording employment to 180 miners.

HIDES AND HORNS.—Previous to the occupation of Kolhapoor by the British troops, the slaughter of cattle was not allowed; the hides of animals who died a natural death afforded a scanty stock, and indeed the supply is still insufficient to meet the demand, and a portion is imported from the adjacent countries of Belgaum and the Putwurdhun estates.

The returns of horned stock throughout the State give an amount of 309,000 animals, and according to the per-centage of mortality 77,000 hides would be available for the purposes of tanning, and are annually disposed of by the Mhars to the Dhers at from 8 annas to Rs. 1 a hide.

A small portion of the horns are used by the Dombace, an itinerant class, who obtain a livelihood by tumbling, in making combs, powder-horns, snuff-boxes, bows, &c.; but the greatest bulk, amounting to about 208,000 seers in weight, and valued at about Rs. 1,300, are exported to Satara for final transmission to Bombay.

TIMBER.—The Western Ghauts are generally very thickly wooded, and a quantity of the timber is large and good: the expense and difficulty of removal to any market, however, have hitherto proved too great for the reception of a constant supply from the hills, and the forests which furnish the timber used in Kolhapoor are situated at a distance of 10 or 15 miles from the crest of the Ghauts, and adjoining the tributaries of the Punchgunga, Doodgunga, and Hurukasee, along which rivers the rafts are floated down immediately after the monsoon to the various market towns.

The two principal forests, the Kolik and Patuk, are computed to extend over a tract of 300 square miles. They are now under the charge of paid keepers, and attention is being preserved towards planting the seed of the most useful descriptions of trees, as the former wholesale and unrestrained felling had nearly exhausted the good stock. Leave, however, is freely given by the Durbar to all specific applications from respectable inhabitants for any supply they may require. The following is a list of the names of the timber grown, with their uses:—

List containing the Names and Uses of the various descriptions of Timber indigenous in the Kolhapoor Hills and Forests.

| No. | Names of Timber. | Remarks. |
|--------------------------|--------------------------------------------------------------|-----------------------------------|
| <i>Good.</i> | | |
| 1 | Jack (<i>Artocarpus integrifolia</i>) | Good. |
| 2 | Boorumba | Good for buildings. |
| 3 | Vowlee (<i>Ulmus laurifolia</i>).. .. | Good for dry purposes. |
| 4 | Womba (<i>Nephelium longanum</i>) | Good ; durable in water. |
| 5 | Haidee (<i>Nauclea parviflora</i>) | Good for rough purposes. |
| 6 | Nania (<i>Lagerstroemia shee</i>).. .. | Good ; durable in water. |
| 7 | Kajra (<i>Nux vomica</i>).. .. | Good for dry purposes. |
| 8 | Patee | Good for buildings. |
| 9 | Sheanee (<i>Lymelina arborca</i>) | Good for making palanquins. |
| 10 | Saya or teak (<i>Tectona grandis</i>). | |
| 11 | Ayen (<i>Pentaptera coriacea</i>) | Good ; durable in water. |
| 12 | Jambool (<i>Calyptranthes jambolana</i>) | Ditto ditto. |
| 13 | Siswa or blackwood (<i>Dalbergia latifol.</i>). | |
| 14 | Kalee koodee (<i>Wrightia fructoria</i>).. .. | Good for dry purposes. |
| 15 | Kinjlee (<i>Pentaptera paniculata</i>) | Good ; durable in water. |
| 16 | Gelnee (<i>Vaugueria spinosa</i>). | |
| 17 | Dhowda (<i>Grislea tomentosa</i>). | |
| 18 | Jamba (<i>Eugenia jambosa</i>). | |
| 19 | Kunchun (<i>Bauhinia variegata</i>). | |
| 20 | Kulumb (<i>Nauclea cadamba</i>). | |
| 21 | Satween (<i>Echites scholaris</i>). | |
| 22 | Payeree (of the genus <i>Ficus</i>). | |
| 23 | Sone chapa (<i>Michelia champaca</i>). | |
| 24 | Babool (<i>Acacia Arabica</i>). | |
| 25 | Letow. | |
| 26 | Kowtee (<i>Feronia elephantium</i>). | |
| 27 | Neo. | |
| 28 | Dung funus, or wild jack (<i>Artocarpus integrifolia</i>). | |
| 29 | Pootus. | |
| 30 | Sujnee. | |
| 31 | Sarwal. | |
| 32 | Koodia (<i>Echites antidysenterica</i>). | |
| 33 | Lornee (<i>Ziziphus albeus</i>). | |
| 34 | Balunt limb (<i>Melia azadirachta</i>). | |
| 35 | Ajrun. | |
| 36 | Moha (<i>Bassia latifolia</i>). | |
| <i>Raewul or Common.</i> | | |
| 37 | Padley (<i>Bignomia chelonoides</i>) | Good ; strong ; durable in water. |
| 38 | Khyree (<i>Mimosa catechus</i>) | Very strong ; durable in water. |
| 39 | Anjun (<i>Hardwickia binata</i>).. .. | Good ; durable in water. |
| 40 | Koomba (<i>Carega arborea</i>) | Good ; not durable in water. |
| 41 | Narum | Good for dry purposes. |
| 42 | Kattay hussun (variety of <i>Briedelia montana</i>) | Good ; durable in water. |
| 43 | Palley hussun (ditto ditto) | Ditto ditto. |
| 44 | Heerda (<i>Chebulic mijrobalan</i>) | Good for dry purposes. |
| 45 | Kurra | Good ; durable in water. |
| 46 | Noanjan | Good for dry purposes. |

| No. | Names of Timber. | Remarks. |
|-----|-----------------------------------------|----------|
| 47 | Adoolsa (<i>Justicia gendarussa</i>). | |
| 48 | Culwan. | |
| 49 | Aolee (<i>Phyllanthus emblica</i>). | |
| 50 | Chandwad. | |
| 51 | Hella. | |
| 52 | Fassee. | |
| 53 | Kinvee. | |
| 54 | Buchia (<i>Siphonanthus Indica</i>). | |
| 55 | Dhama. | |
| 56 | Huldia. | |
| 57 | Marlook. | |
| 58 | Dhawun. | |
| 59 | Lokhdee. | |
| 60 | Mahroon (<i>Bassia latifolia</i>). | |
| 61 | Kurrumbul (<i>Averhoa carambola</i>). | |
| 62 | Sooree (<i>Bombax heptaphyllum</i>). | |
| 63 | Oomber (<i>Ficus glomerata</i>). | |
| 64 | Lunbara (<i>Melia azadirachta</i>). | |
| 65 | Warus. | |
| 66 | Perroo (<i>Poidium pyriperum</i>). | |
| 67 | Kunjal. | |
| 68 | Kurunja (<i>Galedupa arborea</i>). | |
| 1 | Maise or Chewas. | |
| 2 | Bamboos. | |
| 3 | Karwees. | |

The prices at which the above descriptions of wood are sold are as follows :—

Timber used for Building Purposes.

Beams 7 cubits long and 3 inches thick, are sold at Rs. 1 each, or every beam generally 9 cubits long is sold at 7 annas per every cubic inch.

Beams of the same length, when thick above 5 inches, cost each 8 annas per every cubic inch.

When they are above 9 inches in thickness, the price of each beam is 14 annas per cubic inch.

Posts generally 4 cubits long are sold at 8 annas per every cubic inch.

Burgas or joists 4 cubits long, and 3 or 4 inches broad, are sold at Rs. 16 per 100; joists 16 cubic inches thick are valued at Rs. 25 per 100.

Small beams, from 8 to 10 cubits long and 9 inches in circumference, are sold at the rate of Rs. 25 per 100.

Small beams of the same length, 6 inches in circumference, cost Rs. 10 per 100.

Small beams 12 inches in circumference are sold at the rate of from Rs. 35 to Rs. 40 per 100.

Planks 4 cubits long, 1 or 1½ inch thick, and 6 inches broad, are sold at Rs. 16 per 100.

Planks 6½ inches broad cost Rs. 20 per 100.

Rafters 8 or 9 cubits long are sold at from Rs. 5 to Rs. 6 per 100.

Bamboos 10 cubits long, and from 5 to 6 inches in circumference, are sold at from Rs. 10 to Rs. 14 per 100.

Chewas or maize 1 inch thick, and 10 to 14 cubits long, are sold at from Rs. 3 to Rs. 5 per 100.

Bundles of karwees from 4 to 6 annas each.

Timber used for Agricultural Implements.

1 Nagur (plough) is sold from 12 annas to Rs. 1-4-0.

1 Koolow (weeding implement) from 4 to 6 annas.

1 Kiswun (a kind of ditto) from 4 to 6 annas.

1 Pata (a board) from 4 to 6 annas.

1 Joo (yoke) from 8 to 12 annas.

1 Sewul (ditto) from 3 to 5 annas.

1 Kooree (sowing implement) from Rs. 1-8-0 to Rs. 2.

1 Cart from Rs. 20 to Rs. 25.

1 Wheel for drawing water from 4 to 6 annas.

1 Ditto ditto from 12 annas to Rs. 1.

1 Goota (levelling implement) from 4 to 8 annas.

1 Hudgee (sowing ditto) from Rs. 1-8-0 to Rs. 2.

1 Moogna from 6 pies to 1 anna.

1 Ghana (machine for squeezing sugar-cane, kernels, &c.) from Rs. 10 to Rs. 15.

1 Kalpa (weeding implement) from Rs. 1 to Rs. 2.

FUEL.—Fuel brought in rafts down the river is called hondas, and is sold at from Rs. 5 to Rs. 8 per 1,000 pieces, weighing from 1½ to 2 candies.

The hondas are generally supplied by Konkunee Mhars and a few Koonbees.

The following inferior kinds of wood are used for fuel:—

Baya (Cassia fistula).

Seerus.

Dhaotee.

Rametta.

Kutkee.

Asta.

Bharungee.

Aolee Toortee.

Kala Koordoo.

Koordoo.

Pangara (Erythrina cristagalla).

Golee.

Govida.

Hussoler.

Gorella.

Soorungee.

Kurowndee.

Kurunja.

Beebha.

Patree.

Chandwar.

Ser.

Tamarind.

Mango.

Pimpree.

Pullus (Butea frondosa).

Apta (Bauhinia tomentosa).

The expense in cutting and conveying fuel to the landing-place in Kolhapoor is estimated as follows:—

| | |
|--------------------------------------------------------------|-------------------|
| Cutting 4,000 pieces of wood | Rs. 1 0 0 |
| Labour to carpenters for boring holes | 0 12 0 |
| Bringing it to the water's edge | 0 8 0 |
| Hire of the men accompanying the wood down the river | 0 8 0 |
| Wild vines, for securing the wood together | 0 6 0 |
| Tax | 0 8 0 |
| Total.. | Rs. 3 10 0 |
| Saleable in Kolhapoor for | 6 0 0 |
| Profit per thousand | Rs. 2 6 0 |

The Sonarees, a class of people who trade in fuel and charcoal, also bring fuel on asses from the forests, and sell it at Rs. 4 to Rs. 4-8-0 per candy.

The profit and expense to these men may be reckoned as follows :—

| | |
|------------------------------------------------------------------------------------|------------|
| Hire of 1 man for cutting 10 loads of wood, weighing 12½ maunds | Rs. 0 4 0 |
| 2 days' feeding for 10 asses | 0 3 0 |
| Hire to 2 men for 2 days for driving 10 asses, at Rs. 4 per mensem to each | 0 8 0 |
| | Rs. 0 15 0 |
| The price of 12½ maunds of wood in Kolhapoor | 2 10 0 |
| Profit | Rs. 1 11 0 |

Ten asses make six trips in one month for eight months in the year.

The Sonarees also purchase and cut down babool trees for sale.

Babool wood makes the best fuel, and is sold at from Rs. 4-8-0 to Rs. 5 per candy ; but the wood is heavy, and being sold before it is sufficiently dry, a higher rate of profit is obtained than from the common wood of the forest.

The expense and profit in the sale of babool wood may be reckoned as follows :—

| | |
|-------------------------------------------------------------------------|-------------------|
| 1 tree, from which 2 candies of wood can be procured, will cost | Rs. 2 0 0 |
| Labour to 1 man for 3 days, to cut the tree | 0 6 0 |
| Feeding for 1 day to 40 asses for bringing the wood | 0 12 0 |
| 8 men for driving 40 asses, for 1 day, at 2 annas each | 1 0 0 |
| Labour to 1 man for 4 days to hew the wood into small pieces | 0 8 0 |
| | Rs. 4 10 0 |

2 candies of babool wood is valued in Kolhapoor at Rs. 4-8-0

| | |
|-------------------------------------------|-----------|
| per candy | 9 0 0 |
| Profit on every 2 candies of wood | Rs. 4 6 0 |

The fuel used for preparing the fields in the hilly country is taken from the branches of all the trees mentioned in the above statement, and also from

other jungle shrubs, which are scattered over the hills adjacent to the villages, where the process of burning the fields, called by the Natives turwa, is carried on.

The following statement shows the description, quantity, and price of timber, used for building and agricultural purposes, and fuel annually brought into the city of Kolhapoor:—

Wood used as fuel, weight 40,000 candies,

| | | | | |
|----------------------------------------------|----------|---|---|--------------|
| price at the rate of Rs. 4 per candy . . Rs. | 1,60,000 | 0 | 0 | |
| | <hr/> | | | 1,60,000 0 0 |

Wood for agricultural purposes :

| | | | | |
|--------------------------------------------------------------------------|-------|---|---|---------|
| 75 poles of ploughs, at Rs. 1 each .. | 75 | 0 | 0 | |
| 80 pieces for koolows, certain agricultural implements, at 8 annas each. | 40 | 0 | 0 | |
| 80 ditto for yokes, at 8 annas each .. | 40 | 0 | 0 | |
| 25 ditto for koores, ditto ditto, at Rs. 1 per piece | 25 | 0 | 0 | |
| 160 ditto for pegs for yokes, at 4 pieces per rupee | 40 | 0 | 0 | |
| 240 pieces for weeding implements, at 8 pieces per rupee | 30 | 0 | 0 | |
| | <hr/> | | | 250 0 0 |

Wood for buildings :

| | | | | |
|--------------------------------------------------------|-------|---|---|-----------|
| 500 long square beams, 1st sort, at Rs. 4 each | 2,000 | 0 | 0 | |
| 300 ditto ditto, 2nd sort, at Rs. 2 each . . | 600 | 0 | 0 | |
| 500 ditto ditto, 3rd sort, at Rs. 1½ each . . | 625 | 0 | 0 | |
| | <hr/> | | | 3,225 0 0 |
| 2,000 joists, 1st sort, at 4 per rupee | 500 | 0 | 0 | |
| 500 ditto, 2nd sort, at 6 ditto | 83 | 0 | 0 | |
| | <hr/> | | | 583 0 0 |
| 1,000 long poles, 1st sort, at 4 per rupee. | 250 | 0 | 0 | |
| 500 ditto, 2nd sort, at 6 ditto . | 83 | 0 | 0 | |
| | <hr/> | | | 333 0 0 |
| 200 posts, 1st sort, at Rs. 1-4-0 each | 250 | 0 | 0 | |
| 200 ditto, 2nd sort, at 12 annas each | 150 | 0 | 0 | |
| 300 ditto, 3rd sort, at 8 annas each | 150 | 0 | 0 | |
| | <hr/> | | | 550 0 0 |
| 2,500 planks, at 5 per rupee | 500 | 0 | 0 | |
| 5,000 rafters, 1st sort, at Rs. 6 per 100 . . | 300 | 0 | 0 | |
| 4,000 ditto, 2nd sort, at Rs. 5 per 100 . . | 200 | 0 | 0 | |
| 6,000 ditto, 3rd sort, at Rs. 3-8-0 per 100. | 210 | 0 | 0 | |
| | <hr/> | | | 1,210 0 0 |
| 25 doors, 1st sort, at Rs. 1 each .. | 25 | 0 | 0 | |
| 50 ditto, 2nd sort, at 12 annas each . . | 37 | 8 | 0 | |
| 25 ditto, 3rd sort, at 8 annas each .. | 12 | 8 | 0 | |
| | <hr/> | | | 75 0 0 |

| | | | | |
|----------------------------------------------|-----|---|---|-----------|
| 3,000 bamboos, 1st sort, at Rs. 10 per 100. | 300 | 0 | 0 | |
| 3,000 ditto 2nd sort, at Rs. 5 ditto | 150 | 0 | 0 | |
| | | | | 450 0 0 |
| 7,000 small bamboos, 1st sort, at Rs. 5 | | | | |
| per 100 | 350 | 0 | 0 | |
| 300 ditto ditto, 2nd sort, at Rs. 3 per 100. | 90 | 0 | 0 | |
| | | | | 440 0 0 |
| 2,800 bundles of karwees, at 4 bundles | | | | |
| per rupee | 700 | 0 | 0 | |
| 2,100 ditto of toorkuttees, at 7 bundles | | | | |
| per rupee, | 300 | 0 | 0 | |
| 1,200 ditto of reeds of cotton plants, at | | | | |
| 12 bundles per rupee | 100 | 0 | 0 | |
| | | | | 1,100 0 0 |

Abstract.

| | | | |
|------------------------------------------|--------------|---|---|
| Total value of wood used as fuel | Rs. 1,60,000 | 0 | 0 |
| Ditto ditto for agricultural purposes .. | 250 | 0 | 0 |
| Ditto ditto for building ditto .. | 7,966 | 0 | 0 |
| Grand Total.. .. | Rs. 1,68,216 | 0 | 0 |

Cow-dung cakes, also, to the value of about Rs. 5,000, are annually consumed as fuel in Kolhapoor.

MEDICINAL PLANTS.—The Kolhapoor country is regarded as a large contributor to the pharmacopœia of the Native practitioner, and the following list gives the names of the products, and their ascribed properties:—

| No. | Native and Scientific Names. | Properties. |
|-----|---------------------------------------------------|------------------------------------------------------------------------------------------------|
| 1 | Bahawa (<i>Cassia fistula</i>) | Used as a purgative. |
| 2 | Balunt shep (<i>Anethum groveolens</i>) .. | Used after confinement, and in rheumatism. |
| 3 | Bal hirdee (Gall-nut) | Tanning. |
| 4 | Moorood sheng (<i>Hilieteres isora</i>) .. | Used as a fomentation in rheumatism. |
| 5 | Pit papuda (<i>Pharmacum corviana</i>) .. | A febrifuge. |
| 6 | Phalunim sud (<i>Vernonia anthelmintica</i>) .. | Used as an application for itch. |
| 7 | Nag motha (<i>Cyperus pertianus</i>) .. | A febrifuge. |
| 8 | Isbunc | Used in charms against witchcraft. |
| 9 | Akulkara (<i>Anthemis pyrethrum</i>) .. | Said to possess the property of imparting wisdom. |
| 10 | Ir-drujow (<i>Nerium antidysentericum</i>) .. | Tonic, and of use in dysentery, fever, and worm complaint to young babies. |
| 11 | Koyphul (<i>Keliorum bark</i>). .. | |
| 12 | Chitruk mool (<i>Plumbago leyzanica</i>) .. | Fever, and application for piles. |
| 13 | Avulkuty (<i>Myrobalans</i>) | Preventative to griping. |
| 14 | Gelphul (<i>Vangueria spinosa</i>) | An emetic. |
| 15 | Kuchlya (<i>Nux vomica</i>) | External application for sores, and also mixed in spirits to increase the intoxicating powers. |

| No. | Native and Scientific Names. | Properties. |
|-----|---------------------------------------|------------------------------------------------------------------------|
| 16 | Behuda (Beleru mysalolah) | Used in cough, to assist expectoration. |
| 17 | Beebey (Marking-nut) | A universal medicine, used externally and internally for all diseases. |
| 18 | Dyateechu phul (Grislea tomentosa) .. | Used as a vermifuge. |
| 19 | Shikekacc (Mimosa abstergens) .. | Used as a purgative. |
| 20 | Unurdingya (Embelia ribes) .. | Used as a vermifuge. |
| 21 | Bhunkhot (a species of gourd) .. | Used as a tonic. |
| 22 | Ahulea (Sepedum saluum) .. | For purifying the blood. |

The Kollhapoor medicines are not highly approved of by European physicians, and the Native treatment is altogether to be endured only by the strongest constitutions.

FARM STOCK.—DOMESTIC ANIMALS.—In addition to the Government stud, containing fifty excellent brood mares, to supply the Bargeer Risala, a few mares are kept by the Jageerdars and Patels for the purposes of breeding; but no attention whatever is paid to the stock. The climate is also somewhat unfavourable to the purpose, and the degenerate produce is only fit for carrying loads. The breed of cattle is also stunted, and inferior: the best cow yields hardly 2 seers of milk, and the united strength of eight bullocks is required to move one of the country carts.

Buffaloes are numerous, and much more valued, not only on account of the quantity of milk they yield, which is converted into ghee, but the male buffalo is emasculated when young, and greatly used as a beast of burden, and for ploughing deep heavy soil.

The sheep are numerous, and of an excellent kind.

Poultry are extensively reared, and the common fowl is found wild in all the jungles.

The total number of live stock in the principality is contained in the following statement:—

Statement showing the Total Number of Animals, &c. in the Kolhapoor State.

| Number. | Particulars. | Elephants. | | Camels. | | Cattle. | | | | | Goats. | Sheep. | Horses. | Mares. | Asses. | Pigs. |
|---------|--------------------------------------------------------------------------------|------------|----------|---------|----------|---------|----------------|-----------|---------------|--------|--------|--------|---------|--------|--------|-------|
| | | Males. | Females. | Males. | Females. | Cows. | She Buffaloes. | Bullocks. | He Buffaloes. | | | | | | | |

The number of bullocks for cultivation would appear singularly small, but the greater portion of the fields in the Konkun Ghaut Matha, and also in the Desh, are broken up entirely by the hand.

One-third of the cultivators never use cattle at all in cultivation, and among the remaining two-thirds, the aggregate number would afford a proportion at the rate of one pair of bullocks to every cultivator.

Rewards and prizes for good specimens of Kolhapoor produce have been lately introduced, and as the roads and means of intercourse extend, an improvement may be gradually effected in all the different species of stock.

The average prices of live stock are as follows:—

Average Value of Horses.

| | | | | | |
|-----------------------------------|----|----|----|----|---------|
| 1st sort, bred in Kolhapoor, cost | .. | .. | .. | .. | Rs. 200 |
| 2nd ditto ditto ditto | .. | .. | .. | .. | 150 |
| 3rd ditto ditto ditto | .. | .. | .. | .. | 75 |

Average value from Rs. 125 to Rs. 150.

Tattoos.

| | | | | | |
|--------------------------------------|----|----|----|----|--------|
| 1st sort tattoo, used for riding | .. | .. | .. | .. | Rs. 40 |
| 2nd ditto ditto for carrying baggage | .. | .. | .. | .. | 25 |
| 3rd ditto ditto for bringing grass | .. | .. | .. | .. | 10 |

Average value from Rs. 20 to Rs. 25.

Cows.

| | | |
|------------------------------------------------------------|----|--------|
| 1st sort Kolhapoor cow, giving 3 seers* milk per day, cost | .. | Rs. 10 |
| 2nd sort ditto, ditto 2 seers ditto ditto | .. | 8 |
| 3rd sort ditto, ditto 1 seer ditto ditto | .. | 4 |
| 4th sort ditto, giving no milk, but feeding its calf only | 2 | |

Average value from Rs. 6 to Rs. 8.

Buffaloes.

| | | | | |
|-----------------------------------------------|----|----|----|--------|
| 1st sort buffalo, giving 5 seers milk per day | .. | .. | .. | Rs. 20 |
| 2nd sort ditto, ditto 4 ditto ditto | .. | .. | .. | 16 |
| 3rd sort ditto, ditto 3 ditto ditto | .. | .. | .. | 12 |
| 4th sort ditto, ditto 2 ditto ditto | .. | .. | .. | 9 |

Average value from Rs. 14 to Rs. 16.

Oxen.

| | | | | |
|-----------------------------------------------|----|----|----|--------|
| 1st sort, used for drawing the mote, or carts | .. | .. | .. | Rs. 15 |
| 2nd sort, for plough | .. | .. | .. | 11 |
| 3rd sort, for light agricultural purposes | .. | .. | .. | 8 |

Average value from Rs. 11 to Rs. 13.

* Kolhapoor 3 seers are equal to 4 quarts liquid measure, and 1 Kolhapoor seer is equal to 80 rupees weight.

Sheep.

Average value from 12 annas to Rs. 1.

Asses.

| | | | | | | |
|----------|----|----|----|----|----|--------|
| 1st sort | .. | .. | .. | .. | .. | Rs. 10 |
| 2nd sort | .. | .. | .. | .. | .. | 6 |
| 3rd sort | .. | .. | .. | .. | .. | 3 |

Average value from Rs. 6 to Rs. 7.

The cattle are pastured on the extensive slopes of grass lands, or other pasturage intermixed with the arable land, and are fed at home on straw, oil-cake, and cut grass: those for the market are grazed in village herds on the downs, and fed at home on oil-cake and cotton seed.

The profits are confined to the increase of stock, and to the milk and dung, and are exhibited as follows:—

Profits of keeping Cattle.

To form a correct estimate of the profits derived from cows and buffaloes it is necessary to calculate the expense and profit for a period of two years, as a cow produces a calf only every second year: taking a herd of 50 cows, therefore, valued at Rs. 292, the expenses would be as follows:—

Expenses.

| | | | | | | | | | | |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|----|----|----|----|----|-----|-----|---|---|
| <i>Expense in keeping Cows.</i> —Dry grass for 16 months during 2 years, at 2½ bundles for each cow, will amount to 125 bundles daily, or 60,000 bundles for 16 months, at Rs. 3 per 1,000.. | | | | | | | Rs. | 180 | 0 | 0 |
| Grazing for 8 months during the rains of 2 years, at 4 annas per month for each cow | .. | .. | .. | .. | .. | .. | 100 | 0 | 0 | 0 |
| Surkia or cotton seeds for 8 months in 2 years, for cows giving milk, at ½ a Kolhapoor pice, or 2 pies per day to each, for 50 cows.. | .. | .. | .. | .. | .. | .. | 120 | 0 | 0 | 0 |
| 1 cowherd at Rs. 3* per month, for 2 years | .. | .. | .. | .. | .. | .. | 72 | 0 | 0 | 0 |
| 1 assistant, a boy, at Rs. 2 per month, for 2 years | .. | .. | .. | .. | .. | .. | 48 | 0 | 0 | 0 |
| Ropes, wooden pegs, &c. for 2 years for 50 cows | .. | .. | .. | .. | .. | .. | 10 | 0 | 0 | 0 |

Total expense for two years.. ..Rs. 530 0 0

* The Koonbees and Gowlees generally pay their servants by the year, in part ready money, and in part grain, or by giving them their daily food, and one cumblee a year.

Produce in Milk.—The produce in milk of 50 cows would be as follows :—

| | Quantity of Milk per Day for the first three Months. | Quantity of Milk per Day for the second three Months. | Quantity of Milk per Day for the re- maining two Months. |
|------------------------------------------------------------------|---------------------------------------------------------------|----------------------------------------------------------------|----------------------------------------------------------------------|
| | Seers. | Seers. | Seers. |
| 12 To be of the 1st sort, each giving 3 seers of milk | 36 | 24 | 18 |
| 12 ditto 2nd sort | 24 | 16 | 12 |
| 12 ditto 3rd sort | 12 | 8 | 6 |
| 14 ditto 4th sort | .. | .. | .. |
| | 72 seers per day, or 6,480 seers for three months. | 48 seers per day, or 4,320 seers for three months. | 36 seers per day, or 2,160 seers for two months. |

Thus 50 cows give in 8 months 12,960 seers of
milk, at 20 seers per rupee Rs 648 0 0

From the dung of each cow half a pie worth
of cow-dung cakes are made, so that from 50
cows in 2 years cow-dung cakes are procured
of the value of 93 12 0

From this deduct the labour of making the cakes,
at 3 Kolhapoor pice, or 12 pices per day for 2
years 45 0 0
----- 48 12 0

Further, 50 cows in 2 years will produce 50
calves : of these, allowing that one out of ten
calves dies, there remain 45 calves, and of
these, allowing 22 to be male calves, valued at
Rs. 4 each 88 0 0

23 heifers valued at Rs. 3 each 69 0 0

Total.. .. . 157 0 0

From this deduct expense as follows :—

Grass for 45 calves of 3 months old, at 1 poolce
per day for 2 months, 2,700 poolces, at Rs. 3
per 1,000 8 1 7

Ditto for calves of 1 year old, at 2 poolces per
day, for 6 months, 16,200 poolces 48 9 7

Ditto for calves of 2 years old, at 2½ poolces per
day for 7 months, 23,625 poolces 70 14 0

----- 127 9 2
----- 29 6 10

Total profit.. .. . Rs.. .. 726 2 10

Deduct expense of keeping 50 cows .. Rs. 530 0 0

Average profit in two years on 50 cows would be .. 196 2 10

Or on every cow per annum 2 0 0

Buffaloes.—The expense of keeping a herd of 50 buffaloes will be for two years as follows:—

Dry grass for 16 months during two years at 5 poolees per day to each, will amount to 250 poolees daily, or 120,000

bundles for 16 months, at Rs. 3 per 1,000Rs. 360 0 0

Grazing for 8 months at 8 annas each per month during 2 years 200 0 0

Paind or oil-cake to buffaloes whilst giving milk, in the following proportion: To 12 buffaloes giving 5 seers milk, 3 seers paind per day; ditto 12 ditto, 2nd sort, 3 ditto; ditto 12 ditto, 3rd sort, 2 ditto; ditto 14 ditto, 4th sort, 1½ ditto; would be 117 seers of paind per day, or 42,120 seers for 12 months, at Rs. 2-8-0 per candy of 240 seers 438 0 0

Bran to buffaloes whilst giving milk, at 8 pies worth to each per day for 1 year 750 0 0

Pay to 1 man for 2 years for taking care of buffaloes, at Rs. 3 per month 72 0 0

Pay to 1 boy for taking care of buffaloes, at Rs. 2 per month for 2 years 48 0 0

Ropes and wooden pegs for 2 years 10 0 0

Rs. 1,878 0 0

Profit in Milk.—The produce in milk of 50 buffaloes would be as follows:—

| | Quantity of Milk per Day for first four Months. | Quantity of Milk per Day for second four Months. | Quantity of Milk per Day for the third four Months. |
|---------------------------------------------------------------------|-----------------------------------------------------------|-----------------------------------------------------------|--------------------------------------------------------------|
| | Seers. | Seers. | Seers. |
| Taking 12 to be of the 1st sort, each giving 5 seers of milk | 60 | 48 | 39 |
| 12 ditto 2nd sort, 4 seers ditto | 48 | 39 | 30 |
| 12 ditto 3rd sort, 3 ditto | 36 | 30 | 21 |
| 14 ditto 4th sort, 2 ditto | 28 | 21 | 12 |
| | 172 seers per day for four months, 20,640 seers. | 138 seers per day for four months, 16,560 seers. | 102 seers per day for four months, 12,240 seers. |

Thus 50 buffaloes give in 12 months 49,440
seers of milk, at 20 seers per rupeeRs. .. 2,472 0 0

In Dung.—From the dung of each buffalo 2
pies worth of dung-cakes are made daily, so
that from 50 buffaloes for 2 years dung-cakes
will be procured of the value of 375 0 0

Deduct the labor of 2 women for 2 years in
making cakes, at Rs. 2 per month to each .. 96 0 0

279 0 0

In Calves.—50 buffaloes in 2 years will produce
50 calves*: of those, allowing one half to have
died, leaves 25. Allowing 12 to be male
calves, valued at Rs. 2 each 24 0 0
13 female calves, valued at Rs. 4 each .. 52 0 0

Total.. .. 76 0 0

Deduct Expenses:

Grass to 25 calves, at 2 poolees per day to each
for 1 year, 18,000 poolees, at Rs. 3 per 1,000 54 0 0

Ditto for 25 calves, when they are a year and a
half old, at 3 poolees per day for 2 months,
4,500 poolees 13 8 0

67 8 0 8 8 0

Rs. 2,759 8 0

Deduct expense 1,878 0 0

Average profit in 2 years on 50 buffaloes would be.. ..Rs. 881 8 0

Or average profit on every buffalo per annum 8 13 0

Sheep.—The consumption of animal food renders the speculation in sheep
profitable, the old and barren being disposed of to the butchers, whilst a con-
siderable demand exists for the wool.†

Sheep bring forth one lamb annually, and are shorn twice during the
twelve months; so taking a flock of 100 sheep to consist of 90 ewes, and 10
rams, the expense will be:—

Tax for every 100 sheepRs. 6 4 0

1 shepherd for 12 months 10 0 0

Carried forward.. ..Rs. 16 4 0

* The Gowlees generally either give away the calf of the buffalo, or kill it the moment it is
born.

† The milk of the sheep is never sold; it forms a part of the shepherd's daily food.

| | |
|-------------------------------------------------------------------------------------|------------|
| Brought forward | Rs. 16 4 0 |
| 1 assistant for 12 months | 8 0 0 |
| 2 cumblees and 2 pairs of shoes for 1 year to 2 shepherds .. | 6 0 0 |
| Feeding for 3 months in the rains to 2 shepherds,* at Rs. 1 per month to each | 6 0 0 |
| 6 pylees of salt for sheep during the year | 1 0 0 |
| Total expense | 37 4 0 |

Produce in Wool.—100 sheep will produce 50 seers of wool, at half a seer each per annum, at 6 seers per rupee .. Rs. 8 5 4

In Lambs.—90 ewes will bring forth 90 lambs : from these, allowing one-fourth to have died, leaves 68 lambs. When a year old they are worth on an average 12 annas each.. 51 0 0

| | |
|--------------------------------------------------------|------------|
| Total profit.. .. | Rs. 59 5 4 |
| Deduct expense of keeping flock | 37 4 0 |
| Average profit in 1 year on every 100 sheep would be.. | Rs. 22 1 4 |

Sheep tended by Contract.—In some villages sheep are tended by contract.

Expense and Profit.—For every 100 sheep delivered in charge to the shepherd, he produces 25 lambs at the end of the year, which are added to the flock; and all above this number, together with the wool, milk, &c. go to the shepherd, to remunerate him for his labour, and in paying the Government tax. Any sheep missing or dead the shepherd has to make good.

Sheep tended by Owners themselves.—On sheep tended by the owner himself, with his family, the profit will be as follows :—

Expenses.

| | |
|-------------------------------------|-----------|
| Tax on 100 sheep | Rs. 6 4 0 |
| 6 pylees salt during the year | 1 0 0 |
| Total.. .. | Rs. 7 4 0 |

Profits.

| | |
|--------------------------------------------------|-----------|
| Wool for 1 year | Rs. 8 5 4 |
| Average value of 68 lambs, at 12 annas each.. .. | 51 0 0 |

| | |
|-----------------------|------------|
| Total profit.. .. | Rs. 59 5 4 |
| Deduct expenses | 7 4 0 |

Profit in 1 year on every 100 sheep would be Rs. 52 1 4

Besides food for eight months for two members of his family, by letting out sheep to manure lands.

For nine months the shepherd is fed by letting out the sheep to manure land.

FERÆ NATURÆ.

Herds of wild cattle (*Bubalis arno*), the sambar (genus *Cervus*), monkeys of different sorts, spotted deer (the *Azis*), the baikur, and the wild dog, abound in the forests to the westward; tigers, panthers, and bears infest the patches of underwood throughout the country, more especially on the broken ridges which separate the valleys.

The wild boar is found on every hill-side, with the hyena, the wolf, the fox, the hare, and the jackal. Numbers of antelope cover the western plains, and the tiger-cat, the porcupine, the ichneumon, the manis crassicaudata, with the iguana, and many varieties of snakes, are common in every district.

Of the feathered tribe, the florican (*Otis campestris*), the pea-fowl, the jungle-fowl, partridge, snipe, quail, wild duck, teal, and wild pigeon abound, and the rivers swarm with alligators, turtle, and fish.

The fish are of numerous varieties,—murrel, kowlee, baum, parie, dokle, tamber, wunj, wassora, purruk, wumruj, aheer, kheereet,—and all are used for food.

Some reach a very large size, and especially the khēereet, which is to be found exceeding in length $4\frac{1}{2}$ feet, in breadth $2\frac{1}{2}$ feet, and weighing nearly 70 lbs.

MODES OF CULTIVATION.

For the common description of cultivation, which progresses from the month of February to the month of June, the land is in the first instance broken up with the large plough (nagur), drawn by twelve bullocks, by which the soil is loosened. The clods are afterwards reduced by pick-axes and clubs, and a large beam called pindh is dragged over the surface. A second ploughing crosses the first, and a third is given diagonally to the preceding, which completely levels the ground.

Manure, according to the means of the cultivator, is then spread over the soil, generally broad-cast, from a basket, and the land is ready for the reception of the seed, which is set in the ground by the hand, or by the drill-plough, called kooree.

Hilly and hard soils are in the first instance broken up with pick-axes and row-bars, and afterwards ploughed with the large plough, the bushes having been cut down during the previous hot season, and burnt on the ground.

After the process of sowing the seed, the koolow, an instrument having a horizontal beam, armed with iron teeth, is applied to the field, by which the seed is covered with mould, and thus secured from the birds. The thorny ranches of the babool are then tied in large bundles, and drawn over the surface, for the purpose of further pulverising the soil; and this is repeated or four times in every direction, until the tenth day after sowing, by which time the young plant appears above the ground in straight lines called akria.

Weeding is the next operation, to eradicate grass and weeds ; and this is effected during the first month, by means of an iron instrument called kolpa, drawn by bullocks, and afterwards by the hand ; and platforms are erected in every field, upon which the cultivators are continually employed with slings to drive away the birds.

When the time of harvest arrives, the crop is cut down, or pulled up by the roots, and stacked in the field for a few days to dry, after which it is removed to the threshing-floor, where the grain is beaten or trodden out, and winnowed by being poured in the wind from a basket ; it is then stored in large round baskets, which are kept inside the cultivator's house.

The following are the three systems employed in Kolhapoor for the cultivation of rice :—

1st Method.—In the month of April, branches of trees and bushes are cut down and dried, and, together with straw and cow-dung, are spread thickly over a small piece of good land. The mass is set on fire at noon-day, some time in the month of May, and on the following morning a light plough is set to work thoroughly to mix up the earth and ashes.

In the month of June, the rice seed is sown thickly by the hand, the land is re-ploughed, and levelled, and in the course of a fortnight, if the rain be propitious, the young plant has grown to the height of six or eight inches, and is ready for transplanting.

The ground for this operation has been already ploughed four times, well manured and levelled, and prepared into narrow beds with raised sides, the general slope or hill-side forming a series of terraces. The beds are thoroughly saturated with water, and the young plants, being pulled out by the roots, are planted at the distance of a span from each other, and, should the rains not supply the required moisture, irrigation is resorted to. The crop is weeded twice, in September. It is cut down in the latter end of October, and left to dry on the ground for a day or two, then carried and spread on straw on the threshing-floor, where it remains for two or three days, and it is then trodden out by bullocks, and winnowed by the hand from a high stool.

2nd Method.—A piece of land being prepared as above described, the rice seed is mixed with cow-dung, and, being moistened with hot water, is placed in bundles of grass, and subjected to severe pressure for three days, when the seed germinates, and is in this state planted by the hand in the mud. A watch is kept for ten days to preserve it from birds, and when it reaches the height of a few inches it is sometimes transplanted, and at other times allowed to reach maturity in the original planting-ground.

3rd Method.—The land is ploughed four times, and well manured and levelled at the commencement of the rains, when the seed is sown by the drill-plough, after which the crop is treated as in ordinary cultivation.

NAGLEE.—The same processes of burning and preparing soil as used for rice cultivation are pursued in raising naglee. The manure, however, is applied after the seed is put in the ground : it is either sown by the hand or by the

drill-plough, and, when cut, is exposed on a scaffolding for a few days, after which the grain is threshed out, and the bran and husk used as fodder for the cattle.

On the following year *vuria* and *sawa* are sown on the land, and, when the seed springs, the field is carefully looked to, and plants are taken from the thickest spots, and replanted where the seed has not sprouted sufficiently.

JOWAREE, &c.—Jowaree is sown in September, along with ooid, moog, linseed, and toor, through separate bamboo tubes, which are fixed behind the drill-plough. The toor does not ripen quickly, and is allowed to remain standing after the jowaree has been cut : it is also subject to the ravages of worms, which collect in cloudy weather in myriads on the leaves, and require the utmost vigilance and labour to destroy. The crop of jowaree is greatly enhanced by filling up the deep cracks which are caused in the black soil by the sun, and the expansion in the roots of this tall plant.

SUGAR-CANE.—The land must be ploughed to the depth of two feet, four times, with the large plough drawn by sixteen bullocks, and afterwards well manured and levelled.

On the auspicious day settled by the astrologer, during the months of January, February, and March, the surface is divided into deep, narrow, and long beds, which are filled with water. A few pieces of the cane, about a foot and a half in length, are then planted nearly perpendicular by the owner, and pressed into the mud with the foot ; at the same time an invocation is loudly shouted to the Deity to bless the growth.

The land is then planted with shorter cuttings of the cane, placed obliquely in the mud, and constantly watered every week until the commencement of the monsoon ; it is weeded in July and October, and the ground kept loose at the roots of the plants. A strong hedge is next placed round the patch, and a platform erected in the centre, to scare off the hog and jackal at night.

A species of the cane is found in the Punala purgumna which does not require watering,—it is called waree oos, which signifies the sugar-cane of wind,—but is not very productive of saccharine matter. Sugar-cane is also raised in some parts of the Punala and Kurweer districts for two successive years from the same roots. The new sprouts are called chordwa, but are by no means so strong and vigorous as those raised from slips.

TOBACCO.—Tobacco is sown on the sides of nullas and rivers in July, and replanted in good black soil in September. The young tops are nipped off, leaving the plant about two feet in height, with eight or ten leaves, to reach maturity. It is cut down in March, and heaped up in pits underneath the ground for a fortnight, when the leaves are stripped off and dried.

COTTON.—The cotton seed is mixed up with fine manure, and sown by the drill-plough, and turmeric is planted out like rice during the month of April, along with a kind of nachnee called sawa nachnee, which becomes ripe before the commencement of the monsoon.

VEGETABLES.—Vegetables are raised on the separating embankments in the rice fields, or in patches by themselves in the garden land.

SEASONS.—The seasons of planting each description of grain are given in the Table No. 1, at page 13; they, however, vary somewhat in the hilly tracts, where the seasons commence about a fortnight earlier, according as the monsoon sets in. The same description of crop is seldom grown on the same land for two successive years, and in good soil two crops are usually raised during the season without irrigation.

IMPLEMENTS.—The implements used in husbandry are: the nagur, the plough; the koolow, levelling instrument; the pindh, ditto; the kooree, sowing ditto; the kolpa, weeding ditto; the sumbhul, crow-bar; the veela, reaping-hook; the khoorpa, weeding ditto; the chalun, sieve; and the gara, manure cart.

Sketches of these implements are given in Plate No. 1, which will afford a more clear idea than any lengthy description.

MANURE.—Straw, stubble, ashes, cow-dung, with the refuse of vegetables, and other rubbish, are collected during the season in a pit, and, with the sweepings of streets and stables, are used as manure.

Leaves and branches of trees are burned during the hot weather, and the ashes strewed over the surface of the ground, and large flocks of sheep are penned in with nets for several successive nights on particular spots of garden ground, and this is a most favourite method of obtaining the required richness, which is easily accomplished, and also cheap, as it is provided by the payment for the night of the shepherd's food.

Manure, however, in general is sold at from five to eight catt-loads for the rupee.

PRICES OF PRINCIPAL PRODUCTS.

TENURE AND OCCUPATION.

The former condition of the occupation of land in India is a matter of considerable doubt, and the best authorities are at variance on the point; but whether or not the rights of other parties merged during the long period of anarchy which has existed for the last two centuries in Kolhapoor, the reigning sovereign is now considered, and would appear as essentially the proprietor of the soil. All lands are held of him, and the original and eventual rights of ownership in all alienations are intimated in the service and fealty exacted, even in the absence of any money tribute, in the fine levied on adoption, in the forfeiture which can be enforced, and in the reversion to the crown of the alienations in default of direct heirs.

Tenures are held either by sunud from the crown, or from the inferior lords, and the occupation of the land may be arranged under the following two classes, the first consisting of the occupation of that portion which has been retained as crown possession, and for which the holder pays a certain share of the produce as rent, and the second consisting of the occupation under sunud of that portion alienated in Inam and Surunjam, which is entirely or partially free from payment to the State.

The following table shows the Murathee designation and explanation in English of the various descriptions of land occupation prevailing in the Kolhapoor country, showing also the amount of each description, and the rate of cess as Puttee or Babttee paid to Government :--

| Murathce Designation. | Explanation in English. | Amount of each description of Land. | Rate of Cess, as Puttee or Babtee, paid to Government. |
|-------------------------------|------------------------------------------------------------------------|-------------------------------------|--------------------------------------------------------|
| 1ST CLASS. | | | |
| <i>Paying no Cess.</i> | | | |
| Dewusthan | { Land granted for charitable expenses and temple worship | | Paying no cess. |
| Dhurmadao | | | |
| 2ND CLASS. | | | |
| <i>Paying Cess partially.</i> | | | |
| Urzce Inam | Land granted on petition. | | |
| Khoohkat rand | { Land given to the families of men who lost their lives in battle. | | |
| Rotce ambeel kat | | | |
| Cholee kakun | Land given to women on account of the expense of bodkins and bangles. | | |
| Gurkurree | Land originally granted for service, but now only paying a small cess. | | |

| Murathes Designation. | Explanation in English. | Amount of each description of Land. | Rate of Cess, as Putee or Babtee, paid to Government. |
|--------------------------------------------|-----------------------------------------------------------------------------------|-------------------------------------|-------------------------------------------------------|
| 3RD CLASS. | | | |
| <i>Paying Cess, and rendering Service.</i> | | | |
| Surunjam | Land granted for the support of troops, and personal attendance on His Highness. | | |
| Inam | Land granted as simple gift. | | |
| Mohcenne | Land granted in lieu of Hukdars' rights. | | |
| Hoozoor Sunudee and Gaon Sunudee | Land granted for service. | | |
| Jooree | Land granted in lieu of village Huks. | | |
| Bulootedar | Land given for service to village servants. | | |
| Hurkee or Maharkee ... | Land granted to the Purwarces for clearing the dead cattle from out of a village. | | |

The following are the various designations of land held direct from Government:—

1. *Meerasee Ryutawa*.—Land held by ryuts for a long time.
2. *Oopree ditto*. — Ditto ditto for a short time.
3. *Wutnee ditto*. — Ditto ditto hereditary.
4. *Ichal Khund*.—Held by a contract that does not change, but pays the fixed rate of the soil.
5. *Muktee Khund*.—Held on a contract that changes yearly.
6. *Kuolee or Estawa*.—Land that pays a fluctuating rate.
7. *Bhag Juneen*.—Ditto ditto a share of the produce.
8. *Kurduwa ditto*.—Land granted on a Sunudee's name, but not remaining entirely in possession, a part only of its produce being allowed to the grantee, and the rest going to the Government.
9. *Sunudees*.—Lands given to Sunudees as payment for service: their produce is put down in the village account books as received, and again as paid, to the same person.

The number of recorded beegas in the Kolhapoor State, exclusive of the land belonging to Jageerdars, amounts to 173,152, of which the excessive number of 116,976 beegas have been alienated in Inam; but an amount, on account of Putees and Babtees, has been reserved for the Government on these alienated Inams, of Rs. 1,24,669-6-2.

The Inamdars, indeed, furnish at present a direct payment to the treasury of about 30 per cent. on their possessions, and are liable to be called upon for

other customary State contributions, which have hitherto amounted to a further annual sum of about 5 per cent.

By this it will appear, that although the alienated property is exhibited as excessive, with respect to the remnant of Government lands, still the policy of the State has retained, besides the preservation of the individual surunjam, to be called out when required, a very ample and sufficient share of receipts for the treasury, from the proceeds of this description of property.

By this arrangement, also, the Government profit very considerably, in not being subjected to any calls on account of heavy remissions and protection, which would be otherwise imperative, if the entire lands were under their own control and management.

The cultivating land-occupants of Kolhapoor may be classed under the following five descriptions :—

Oopree.—Ryuts who have recently commenced cultivating land.

Wutundars.—Ryuts who enjoy land in inam.

Meerasdars.—Ryuts who have cultivated land in a village for a long time.

Olandee.—Ryuts cultivating land situated in a village different from that in which they reside.

Pyreikurree.—Ryuts who cultivate land belonging to Wutundars.

No one at the present day, holding Khalsa lands on rent, has the power of alienating them to other parties, either by gift, sale, or transfer. A tradition, however, is current, that the Meerassee or Wutundaree lands in this country were in former times alienated, on the party who made over the land passing a paper, in which the amount of the Government Iluk was prominently inserted.

Inam lands, however, in Kolhapoor, can be sold or transferred by parties in occupation, but a person possessing only a life interest in land cannot sell or transfer it, and any transaction of the sort must be without the knowledge of the authorities, who have the power and right of resumption on the death of the grantee, and it would appear that the villages possess no property in land exclusively under their immediate control, and solely for the benefit of the community, without reference to the Government authorities.

The lands enjoyed by the Bulootedars for the services they perform are entered in the village records: there is no tradition even regarding the original tenure or grantor, but these lands cannot now be either sold or alienated without the permission of Government.

The Wutuns of Patel, Deshmookh, Deshpandey, and Buloote, are not resumed until the extinction of the family of the holder, but they are often placed under attachment on the implication of the parties in rebellion, murder, embezzlement, or other serious offences; and although their final reversion to Government entirely rests on the will of the authorities, there are no traces on the records of the Wutuns having been thus incorporated in the Khalsa possessions.

On the death of a Wutundar, his heir is confirmed in the Wutun by Government, who receive from him a Nuzurana in accordance with the proceeds of his Wutun and his circumstances; and in the event of continued misconduct, some member of the family is appointed in the place of the offending individual.

A portion of two-thirds of the entire country is at present alienated, and held under sunud or long undisturbed possession, and the examination of upwards of five thousand documents has proved that the majority of the alienations were made by the Kolhapoor State, from the time of His Highness Rajaram Saheb, in 1618, to that of His Highness Bawa Saheb Maharaj, in 1838, in favour of Dewusthans, Dhurmadaos, Wutundars, distinguished Sirdars, Mankurees, and faithful servants, and, in a few instances, in favour of private individuals. The grants consist of Jageers, villages, lands, Wutuns, and different kinds of Huks, the annual proceeds varying from one rupee to seventy-five thousand rupees, generally bestowed in perpetuity, although a few are entered as life grants, and in some sunuds the term of holding is entirely omitted.

Many of the Deshpandias, however, with the Deshmookhs, and other Wutundars, still enjoy their grants under the terms given by the old Mahomedan rulers to their ancestors, but the original sunuds are not now forthcoming, and only mentioned in those of later date, which were issued by the Kolhapoor princes.

Grants issued on account of Dewusthans cannot be revoked so long as the pagoda stands, but Dhurmadao sunuds are sometimes cancelled on the extinction of the family of the original recipient. Few instances occur of an entire reversion to the State of any of these grants. A general reduction, however, of one-third was effected in all charitable allowances after the insurrection of 1844. The records also show a slight reduction which was made during the administration of the Dewan Saheb, and in former times these grants were freely seized, on the parties enjoying them being found concerned in any serious offences.

The grants made to Dewusthans and Dhurmadao, as also those to Brahmins and other poor persons, are in most instances exempt from payment of Putee; but those enjoyed by Jagcerdars, Muhalee and village Wutundars, are subject to certain fixed annual payments to the State, although in all cases the rates of tax are by no means uniform. The payments made by the former are called Babtees, and those by the latter Putees.

Jagcerdars, and other village Wutundars, who are denominated Naiks, are also required to pay, in addition to the above, a Putee called Doostputee, on the occasions of the birth of sons, and on the occasion of marriages in the royal family, the rate of the levy varying from Rs. 2½ to Rs. 5 per cent. on their annual income.

Many of the grants were originally made on receiving a Nuzurana, generally consisting of cash payments, horses, weapons, gardens, articles of curiosity, or whatever the Raja may have greatly coveted, and the following are inserted as the usual grounds of the gift:—

To Bramins.

1. For the construction of works of public utility.
2. For the maintenance of a learned and intelligent Bramin, having a large family.
3. For reciting the Poorans, either before an idol of the palace, or some members of the royal family, or at some place outside.
4. On the occasion of Kunyagust, the eclipses, and the Kupilashushtee; these occasions being considered by the Hindoos as highly efficacious in enhancing the merit and value of the charity.
5. For the performance of Unoosthans (rites).
6. For the support of Ugnihotru (unceasing fire).
7. For having predicted an auspicious time for undertaking an expedition, &c. &c.
8. For having built and consecrated new temples.
9. For charity on the occasion of the birth of princes.
10. Ditto ditto deaths of the members of the royal family.
11. In consequence of the old sunuds, issued by Mahomedan and other princes, having been lost or destroyed.
12. For carrying the bones of the members of the royal family to Benares.

To Servants and others.

1. For distinguished bravery in the field of battle, and for assistance rendered in defeating the enemies of the Raja, and extending the limits of the State by the conquest of new countries.
2. For faithful and loyal service.
3. For the support of widows and children of persons who met with death while fighting for the State.
4. For losses sustained from the commission of the crime of arson, &c.
5. To the Pendarees for plundering the camp, &c. of the enemy during the times of war.
6. As a milk allowance for a new-born son.
7. For having planned and superintended the preparation of certain dishes for the royal table on a great occasion.
8. For having killed tigers.
9. On account of the insufficiency of the proceeds of existing Wutuns for the support of the holders.
10. For having repopulated villages and bazars.
11. For faithful service.
12. For the defrayment of the expenses of palanquins, Aftabgiree, Chutree, and other similar grants from the Muharaj.
13. For Cholee Kakuns, that is, lands granted for defraying the expenses of the Cholee (bodkins) and Kakuns (bangles) of women.
14. For having sunk wells, and erected other works of public utility.

MODES AND RATES OF ASSESSMENT.

Although instances exist both of the Moujewur and Khottee* settlements, by which the determinate sum is agreed upon by Government to continue for a period of years, and the arrangement of sub-letting entrusted to the contracting parties, the Ryutwar is the prevailing settlement in Kolhapoor, by which an annual agreement is entered into with the individual cultivator, who pays rent for those fields only which he cultivates, and should they prove unproductive, he is entitled to an abatement.

The division of the village lands into separate allotments, and the individual rates of each allotment, were fixed in olden times, and the fiscal arrangement in Kolhapoor has been attributed to the celebrated Minister Mulik Umbur of Beejapoor; but the ancient records have generally been destroyed during the long-prevailing anarchy, and few documents are now forthcoming of even the last century. On whatever data the original Tunkha may have been formed, local surveys were subsequently admitted, and although Mulik Umbur's village settlement provided for the enjoyment to the Government of two-fifths, and to the cultivator of three-fifths of the crop, at the present day little proof remains of the details, or indeed of aught than the fixing a limit to demand, subject to infringement, from which the Indian peasant has never been exempt.

A custom, however, has been firmly established, and is seldom interfered with; and although the feelings of private enmity may sometimes induce a higher offer for a particular allotment, a loss is not often willingly sustained, even to injure an enemy, and matters shortly revert to their original footing.

Meeras occupation is of rare existence in Kolhapoor, and should a ryut wish to quit the land in his present possession, information is given to the Patel and Koolkurnee of the village, and eventually to the Mamlutdar, who, after ascertaining the transaction to be voluntary, issues orders for its transfer to any party who may agree to the Government terms, and a loss falls on the Government which may accrue from the land remaining fallow.

In the event of the land proving of greater value than is actually paid, the Mamlutdar is authorised to receive a higher offer, and if the occupant refuses to agree to the raised rate, to transfer the field, after reference to head quarters, to the highest bidder.

Land given on lease is subject to similar procedure.

In the event of a ryut throwing up his land, the Mamlutdar is authorised to let it at the highest obtainable sum, but is not restricted to the original fixed rate.

Uncultivated land is generally let on a lease of from two to ten years, and given to the highest bidder. The settlement is in the first instance made by the

* In some places, but more especially in the Konkun, there exists a class of revenue farmers called Khote, who were originally mere temporary collectors of the assessment, but who have in many instances transmitted the office to their children, to the supersession of the original village authorities, producing as a title for their claim length of enjoyment, acquired and retained during a period of anarchy and misrule.

village authorities, and after being examined by the Mamlutdar, receives the final sanction from head quarters.

Every ryut enters into a written agreement, stating that he will pay the Government rate, even if the land remain fallow ; and should the field really be left untilld, the terms of the agreement are partly enforced, according to the forthcoming means, and to prevent loss from bad example. A portion, however, of the rent is always remitted, according to the circumstances of the case.

In all transactions the settlement is in the first instance entered into between the ryut and the village officers, a reference being allowed to the Shaikdar, and an appeal to the Mamlutdar, and eventually to head quarters.

After the annual arrangements have been concluded, in accordance with the above regulations, the Patel and Koolkurnees, with the consent of the cultivator, prepare the separate accounts of each individual, and from these the Shaikdar frames his statement of the quantity of land which has been let from the village, and the Lownee Patruk is afterwards prepared during the months of September and October by the Patel and Koolkurnees.

The payments of the ryuts are then fixed, with reference to their cultivation, and to the receipts of former times, after deducting all extraordinary contribution ; and the Ayen or original assessment was fixed on a view of the productive powers of the village in prosperous times, and may be considered the highest realizable rent.

In addition to the original rate of assessment, the imposition of Putees or extra cesses have been firmly established, and the principal are exhibited in the Statement No. 1.

Permanent and contingent village charges and assignment, estimated at about 20 per cent., and exhibited in the following statement, are made out of the gross Jumma, and the balance forms the Government revenue :—

Statement showing the Details of the Sum deducted as Revenue not realizable by Government.

Total....Rs. 93,262 8 8

In lands called Rakh Ran, situated among rocks and ravines, where inferior grains are alone sown, the gross produce is merely estimated by the revenue officer, and one-half or one-third part assumed as the Government share; but rates of land assessment vary greatly, according to the locality and quality of the soil, and in proportion to the smaller or larger quantity of land assigned to the beega. In many places, the fields are farmed out by contract to the highest bidders, and the rate then becomes exceedingly fluctuating. In other places, one-fourth, one-third, and one-half of the produce is taken, but throughout the State the average rate of the best description of land varies according to locality and size of the beega, from Rs. 4 to Rs. 54 per beega, and of the most inferior from 3 annas to Rs. 2 per beega.

Remissions are invariably given according to injury sustained from want or superfluity of rain, blight, or the ravages of birds and insects; and waste lands, which, however, are now scarce, are granted on an Istawa Kuol, free for a term, but providing that the full rent be paid within the tenth year, by the individuals who undertake to bring them under cultivation.

The following table exhibits all the detailed particulars on the subject of assessing the different varieties of soil, as entered in the village books, and at present existing throughout the State:—

Statement showing the Rates of Assessment.

Rates of Assessment on Bagaeet or Garden Lands.

(In all two hundred and ten kinds of rates.)

The aggregate proceeds of these rates of assessment, however, more clearly exhibit the real interest of the State, on a large tract of country, the greater part of which has, according to the following statement, been alienated from the crown, rather than the real value of the ground:—

| Particulars. | | | | | | | Land. | | |
|--------------------------------------------|----|----|----|----|----|----|---------|----|-----|
| | | | | | | | Beegas | P. | K. |
| Jageerdars | .. | .. | .. | .. | .. | .. | 261,104 | 2 | 18½ |

| Grand Total | .. | .. | .. | .. | .. | .. | 440,367 | 12 | 16½ |

The total amount of land revenue for the year 1852, as mentioned in the following statement, is Rs. 5,54,142, and on the deduction of the Munohur collections, amounting to Rs. 5,090, the land revenue of the Kolhapoor possessions above the Ghaut would amount to Rs. 5,46,052:—

| Particulars. | | | | | | | Amount. | | |
|--------------------------------------|----|----|----|----|----|----|----------------|-----|----------|
| | | | | | | | <i>Rupees.</i> | | |
| Amount of land revenue | .. | .. | .. | .. | .. | .. | 5,51,142 | | |
| Deduct amount of Munohur collections | .. | .. | .. | .. | .. | .. | 5,090 | | |
| | | | | | | | Balance | Rs. | 5,46,052 |
| <i>Details.</i> | | | | | | | | | |
| Government land revenue | .. | .. | .. | .. | .. | .. | 4,80,685 | | |
| Proceeds of attachment | .. | .. | .. | .. | .. | .. | 65,367 | | |
| | | | | | | | Total | Rs. | 5,46,052 |

Of this sum, Rs. 57,163 are the collections on account of Bagaeet cultivation, and Rs. 3,40,138 those arising from the collections on account of Jeeraet cultivation, altogether amounting to a sum of Rs. 3,97,301, which, according to the written accounts, is the amount of collections derived from the Government

land tax, as the remaining amount of Rs. 1,48,751 is derived entirely from a variety of heads contained in the following List No. 1 :—

| No. | Particulars. | Amount. | | |
|----------------|------------------------------|--------------|----|----|
| | | Rs. | a. | p. |
| 1 | Doomala Babtee | 43,058 | 14 | 5 |

| 25 | Gullay puttee | 17 | 1 | 9 |
| 26 | Shradh puttee | 5 | 14 | 6 |
| 27 | Bhigwun | 15,735 | 0 | 4 |
| Total. | | Rs. 1,48,751 | 0 | 0 |

By this account it will appear, that of the entire present revenue of Kolhapoor, only about one-half is collected as the amount of the land tax, and that about one-half is received from other sources of contracts, dues, rights, and fees, both on the Government lands and also on those of the Inamdars.

The Babs, though generally local, and originally imposed as a temporary cess, have now become permanent taxes, and do not bear in any way hard upon the people. They are also all of more ancient date than the memory of the present generation extends to, and are regularly entered in the Government records, which exist through a period of thirty-six years, to the year 1812, when the documents were destroyed in a conflagration caused during a tumult which took place within the precincts of the palace.

The amount of land tax, Rs. 3,97,301, would thus give an average rate of Rs. 6 to be paid per beega, on the remaining portion of 61,851, crown beegas; but the burthen is distributed among the Inamdars, who, in accordance with the

prevailing custom, furnish to the ryot, for cultivation, their excessive amount of alienated land, at a cheaper than the Government rate, which arrangement tends to preserve a balance between the high demand required for its land by Government, and the necessary means of maintenance required by the cultivator.

Thus, although only one-third of the entire tract denominated Kolhapoor, strictly speaking, belongs to the Kolhapoor Government, a revenue is obtained from this portion fully equal to what would be an average assessment on the entire tract, calculated on the rates prevailing in the adjacent countries, as the Kolhapoor Government now receive from their general land interest in the State a net revenue of Rs. 5,46,052, which would exhibit an interest in the entire soil to the average amount of about Rs. 2 per beega.

The term beega, however, is very vague and indefinite, although the land measures of Kolhapoor are of one standard; but the plots of ground have been entered in the records, apparently on some nominal standard of productiveness, the beega of good rich land being invariably smaller in dimensions to the beega of poor soil, and great partiality having been also displayed in the measurement to favoured individuals, causing a further variation and confusion of the original system.

In respect to the proportion of the gross produce received by Government, the share appropriated to the expense of cultivation, to the maintenance of the ryot's family, and the profit remaining, the following memorandum may be considered as showing an average account:—

| | | | | |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----|---|---|
| A ryot of middling circumstances, having 4 bullocks and 2 ploughs, can cultivate 7 beegas of land, each beega yielding 10 maunds of grain, worth about Rs. 20, or in the aggregate 70 maunds, the average price of which, at the rate of Rs. 2 per maund, will amount to | Rs. | 140 | 0 | 0 |
| Deduct two-fifths on account of the Government share, or | | 56 | 0 | 0 |
| Share of the ryot.... | | 84 | 0 | 0 |

From the ryot's share he has to defray the following charges:—

| | | | | |
|--------------------------------------------------------------------------------------------------------------------------------|-----|----|----|---|
| Average amount of proportion of the prime cost of 4 bullocks, supposing the animals worth Rs. 40, and to live for 4 years..... | Rs. | 10 | 0 | 0 |
| Ditto of plough..... | | 1 | 0 | 0 |
| Labour of 158 persons for 1 day, or 158 days, at 2 annas der diem..... | | 19 | 12 | 0 |
| Cost of seed..... | | 2 | 0 | 0 |
| Fees of district &c. officers, and charity..... | | 17 | 8 | 0 |
| Feed of 4 bullocks for 1 year..... | | 12 | 0 | 0 |
| | | 62 | 4 | 0 |
| Net profit of the ryot | Rs. | 21 | 12 | 0 |

| | | | | |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|----|----|------|
| | Brought over....Rs. | 21 | 12 | 0 |
| Add the amount of saving effected, on account of the ryot and his wife labouring for 78 days in the fields (which amount is included in the sum of Rs. 19-12-0 mentioned above as cost of labour) | | | | |
| | Rs. | 9 | 10 | 0 |
| Sale of ghee, milk, sheep, poultry | | 7 | 0 | 0 |
| Labour of women in spinning thread | | 3 | 0 | 0 |
| | | | 19 | 10 0 |
| | Rs. | 41 | 6 | 0 |
| Deduct expenses for the support of the ryot's family, consisting of 2 persons and a child :— | | | | |
| Grain for one year..... | Rs. | 15 | 0 | 0 |
| Cloth ditto | | 10 | 0 | 0 |
| Sundry expenses | | 6 | 0 | 0 |
| Interest of debt to Soukar | | 4 | 0 | 0 |
| | | | 35 | 0 0 |
| Being a net profit for amusement and religious ceremonies | | | | |
| | Rs. | 6 | 6 | 0 |

LABOUR EMPLOYED, AND ITS REMUNERATION.

All labour is performed by either man or beast, with little aid from machinery, and often in direct opposition to the rules of mechanics.

The camel, the horse, the ass, the bullock, and the buffalo are employed as means of draught and burden, but being of indifferent stock, undersized, and underfed, their powers are below the average of the adjacent districts.

A great portion of the agricultural labour is performed by mutual assistance rendered to each other among the village communities, and the evening meal is considered an ample remuneration for the good office.

When hired, however, for any farming purpose, a day-labourer receives from 1 anna to 1½ anna, which is paid either in money or grain, but chiefly in the latter, according to the current price in the bazar.

Two annas per diem is the average hire for conveying loads, and the daily and monthly rates for artizan labour are exhibited in the following table :—

Table showing the Names of various Artizans to be obtained in Kolhapoor, together with their Rate of Daily Wages.

| No. | Description. | Daily Wages varying from | |
|-----|------------------------------------------|-----------------------------|------|
| | | <i>Annas</i> | |
| 1 | Carpenter... | 4 | to 8 |
| 2 | Blacksmith | 5 | 8 |
| 3 | Bricklayer | 6 | 8 |
| 4 | Tailor | 3 | 7 |
| 5 | Coppersmith | 5 | 8 |
| 6 | Goldsmith | 4 | 8 |
| 7 | Substantial brick-maker... | 2½ | |
| 8 | Karkoon... | 4 | to |
| 9 | Stone-cutter | 5 | |
| 10 | Maker of turband-fashioned caps for boys | 3 | |
| 11 | Shoemaker | 4 | |
| 12 | Bamboo-work maker | 3 | |
| 13 | Jingur (saddle-maker) | 4 | to 6 |
| 14 | Weaver of coarse cotton cloth | 4 | |
| 15 | Carpet-weaver | 4 | |
| 16 | Caster of pinchbeck rings | 4 | |
| 17 | Perfumist | 8 | |

Table exhibiting the various Descriptions of Carriage available in Kolhapoor, the Weights usually carried, the Distances accomplished, and the Daily Rates of Hire.

| No. | Description. | Weight carried. | Distance carried during the Day. | Daily Hire. |
|-----|-----------------|--------------------------------------------------|----------------------------------|--------------------|
| 1 | Camel .. | 4 Satara maunds, or weighing Co.'s Rs. 25,600 .. | 8 coss, or 24 miles .. | Rs. a. p. 1 0 0 |
| 2 | Hired pony .. | 8 maunds, ditto ditto 7,680 .. | Ditto ditto .. | 0 6 0 |
| 3 | Bullock .. | 20 pylees, ditto ditto 8,000 .. | 4 coss, or 12 miles .. | 0 2 8 |
| 4 | Ass .. | 2 maunds, ditto ditto 1,920 .. | 6 do. or 18 do. .. | 0 2 0 |
| 5 | A large cart .. | 13 ditto, ditto ditto 28,800 .. | 4 do. or 12 do. .. | 0 10 0 |
| 6 | A small cart .. | 10 ditto, ditto ditto 9,600 .. | 2 do. or 6 do. .. | 0 8 0 |
| 7 | A man .. | 5 Satara pylees, ditto ditto 2,000 .. | 6 do. or 18 do. .. | 0 2 0 |

The average weights carried, and the amount of labour performed during the day by men and bullocks in agricultural pursuits, are as follows :—

A cart with 2 bullocks is calculated to carry 6 maunds of grain, equal to 480 seers, or 8 cwts. 91 lbs. Avoirdupois, and will make three trips a day of two miles each trip.

A cart with stone wheels, drawn by 8 bullocks, and attended by 2 men, will carry 15 maunds of grain, equal to 1,200 seers, or 22 cwts. 4 lbs. 9 oz., and will make three trips a day of two miles each trip.

A pair of bullocks yoked to a zoovnee, (two poles tied to the yoke, with their points resting on the ground,) with one man, will carry 100 bundles of grass, and make three trips a day of two miles each.

Table showing the Amount of Labour performed during the Day by Men and Bullocks in Agricultural Pursuits.

| Names of Implements used. | For what purpose. | No. of Bullocks. | No. of Men. | Quantity of Work done in Beegas in one Day. | | Amount of Expense. | |

WATER.

There are four principal rivers, the Warna, the Punchgunga, the Wedgunga, and the Hurnkasee, which rise in the State, and flow down the four principal valleys of Kolhapoor.

They are all tributary to the Krishna, which river also forms a portion of the eastern boundary of the State, and the course of the tributaries, which is nearly direct from west to east, extends from about 60 to 150 miles, from their source among the Sahyadree Ghauts to their junction with the river Krishna.

Their breadth, at the junction, is as follows :—

River Warna, 222 feet ; Punchgunga, 577 feet ; Wedgunga, 192 feet. The Hurnkasee does not form a junction within the Kolhapoor limits. Their beds, during the dry season, are at an average depth of 40 feet from the top of the banks, and the mass of water which continually pours down during the monsoon frequently fills their deep chasms, and overflows the plain country for miles along the banks.

There are, however, no falls, and few rapids to be encountered, and during the season from October till January, rafts of timber, composed of many hundred beams, are annually floated down for a distance of from 40 to 100 miles, for building and agricultural purposes, and also for fuel.

As it rolls along the Kolhapoor country, the river Krishna is about 1,300 feet in breadth, and contains ample sufficiency of water for small boat-craft. A few basket and ferry-boats, however, at present only ply from side to side, but from the observations taken on the spot by the late Captain Hart, of the 2nd Grenadiers, it would appear, that from Koorundwar, which is situated at the junction of the Punchgunga, this noble river, with the exception of a fall of a few yards, flows uninterruptedly for 100 miles towards the frontier of the Hyderabad territory, and that there would be little if any difficulty in navigating this portion with flat-bottomed boats, rigged with mast and sail, and drawing twelve inches of water.

From their source on the Western Ghauts until they emerge from the mountainous tract on the plain, a distance of about 30 miles, the Kolhapoor rivers are fed by innumerable tributaries, each hill-side furnishing its quota. Through the plain, however, they receive little addition to the amount of water, which, during the hot weather, is very leisurely carried along the river Krishna through a succession of deep pools and shallow fords.

The only peculiarities to be noticed, with regard to the Kolhapoor rivers, are the extreme depth of their beds from the surface, and the generally soft nature of the beds themselves, both of which circumstances materially increase the difficulties in providing an easy and uninterrupted intercourse through the country during the monsoon.

Their general level, also, above the Krishna, being very trifling, when the latter river becomes full and flooded, the capability of discharge is wanting, and a back-water, extending in some places for 30 miles, overflows a large

portion of each valley, greatly to the detriment of the villages and crops on the banks of each of the Kollhapoor rivers.

CANALS.—There are no canals at present in Kollhapoor, although the face of the country is well adapted for sluicing operations, and the entire waters of the Punchgunga, which are now allowed to run waste into the river Krishna, might, at the cost of about Rs. 3,50,000, be turned at the village of Berud, and brought to irrigate a fine plain of upwards of 1,000 beegas of the best alluvial soil, after supplying streams through the principal streets of the city, and affording, from the increase of revenue, a per-centage of at least 5 per cent. on the original outlay.

TANKS AND WELLS.—Throughout the principality, but chiefly in the plain country, there are altogether 197 tanks, and 11,908 wells; but art has accomplished little to aid the bounty of nature. The tanks are with few exceptions natural rocky hollows and pits, or narrow basins, varying from 100 to 800 yards in length, between hills, which have been blocked together by a rude embankment, and where the fluid becomes exhausted before the commencement of the hot weather. The wells used for irrigation are simple holes dug in the soil, unfaced with any building material, whilst a very rough stage of poles and branches is erected to fix the apparatus for raising the basket. The depth at which well-water is found varies much, in consequence of different descriptions of soil from 10 to 40 feet from the surface, and the wells are invariably worked by cattle.

At present, there is only one fine artificial tank, which is situated in the immediate vicinity of the capital, and which is designated the Runkala tank, after a god* of that name, who in ancient days enjoyed the favour of Muhaluxoomce. It is 12,612 feet in circumference, and the Bhundara is well faced with cut stone; and besides being used to irrigate 103 beegas of orchard land, a large stream has been lately conveyed inside the city for the use of the inhabitants.

The following statement contains the few tanks, which are continually used for purposes of irrigation, although, in seasons of abundant rain, the greater portion of all the remaining pools are used to assist cultivation for a month or two immediately subsequent to the monsoon:—

| No. | Names of the Tanks. | No. of Beegas irrigated. | Amount of Tax received by Government. | | |
|----------|-------------------------------------|--------------------------|---------------------------------------|----|----|
| | | | Rs. | a. | p. |
| 1 | Pudmala | 58 | 542 | 8 | 0 |
| 2 | Roodru Teerth, or Mhar tank | 6 | 60 | 0 | 0 |

| 4 | Kote Teerth | 14 | 105 | 0 | 0 |
| Total. . | | 86½ | 777 | 8 | 0 |

* Runk Buherow, an incarnation of Shiva.

MEANS OF IRRIGATION.—The greater portion of the Kollhapoor territory generally enjoys ample means of irrigation for ordinary husbandry. Throughout the tract of the Konkun Ghaut Matha, the periodical rains are trusted to with the most implicit confidence, and should any slight deficiency actually occur, which, however, very seldom happens, recourse is often had to the rivulets which trickle down the hill-sides, and which can be led at small expense and labour to provide to a certain extent for the scarcity.

Among the broken and undulating country bordering the plains, the various streams, having now considerably increased in bulk, are everywhere pursuing their course to join the principal rivers which water the valleys, and throughout this tract many villages possess a rude little aqueduct, whose neglected condition, however, evinces other means of supply.

In the less favoured portions of the Desh, the rivers afford a never-failing reservoir of water; wells also become more frequent; but still the proximity of the district to the Ghauts and forests generally secures for the entire tract, with the exception of the Sherole lands, a fair proportion of the periodical fall.

Many of the natural sheets of water, however, might be made to assume a very different appearance from their present aspect, and great scope altogether exists for improving the resources of the country, in its means of irrigation, for the higher descriptions of cultivation, more especially by throwing embankments over the rivers in the hilly districts, and by cutting artificial trenches from their beds in the plains, through which a supply of water might easily percolate into wells, somewhat removed from the banks of the stream; but innovations, when too rapidly attempted, are not looked upon with a favourable eye by the denizens of the country, and the want of capital among the cultivators, who are by no means a very pains-taking class, materially militates against the introduction of these ameliorating measures.

CITIES.

In the following table are exhibited, alphabetically arranged, the number, with their distances from the city of Kollhapoor, of cities, towns, and villages throughout the principality, and amounting, according to the statement, to 1 city, 47 towns, and 1,335 villages.

Of these 553 are alienated, either in Jageer or Inam, 331 are placed under the management of the Rutnageeree and the Sawunt Waree authorities, and the remainder belong to, and are under the immediate control of the Kollhapoor Government.

Statement showing the Number of Towns, Villages, &c. in the Kollupoor State, A. D. 1850-51.

| Number. | Particulars. | TOWNS, VILLAGES, &c. | | | DETAILS. | | |

SITUATIONS, AND GENERAL DESCRIPTION.—The towns and villages of Kolhapoor are very equally distributed on the plains, on the sides of the rivers, and among the hills and jungles.

The villages on the plains and by the sides of the rivers are not generally of any great size, but they present no symptoms of ruin or decay. They are invariably surrounded by mud walls, and in many instances have a further protection from masses of prickly pear, which extend thick on every side. The houses are commodious, built of brick, and tiled or terraced; and the village contains within itself sufficient guards for general security, and tolerable accommodation for the passing traveller.

The villages in the hilly country near the Ghauts are generally inferior in size and material to those in the plains: they are also thatched with coarse grass, which is carefully taken from the roof during the hot weather, for fear of fire, and the inhabitants are thus further exposed to great vicissitude of climate.

The hamlets, which are erected by the denizens of the jungle, are secluded from view in deep thickets, and are made of wattle and mud, and often covered with creepers: they are, however, cool and waterproof, although the sites are obnoxious to the access of fever and epidemic.

In the city of Kolhapoor, among many other improvements, 20½ miles of metalled road with side drains have been completed, and in the districts raised roads have been carried through all the principal streets and lanes of villages, which have been further subjected to the more simple sanatory regulations, in admitting fresh air, and getting rid of the former accumulation of filth.

The system, also, is now under introduction of local village committees, to take notice of all existing nuisances and contemplated improvements, for report to head quarters; and a great future benefit is anticipated from this measure, as, on a portion of the expenditure of any public work of utility being subscribed by the villagers, the balance is generally sanctioned by Government from the amount of town duties, and the work carried into effect.

In former days, the value of a house situated within the walled defences of the city reached the high sum of Rs. 400, whilst a dwelling of similar dimensions and material in the suburbs could be obtained for about Rs. 40.

The security, however, latterly enjoyed from burglary and gang robbery, has greatly equalized the relative value of dwelling-houses, and the general average cost of house-building is exhibited in the following statement:—

Material.

| | | | | |
|-----------------------------|--------|---|---|--------|
| Stones for foundation | Rs. 19 | 0 | 0 | |
| Bricks | 30 | 0 | 0 | |
| | | | | 49 0 0 |

Wood-work.

| | | | | |
|-------------------------------|--------|---|---|--------|
| Beams | Rs. 30 | 0 | 0 | |
| Pillars and ridge poles | 10 | 0 | 0 | |
| | | | | 40 0 0 |
| Carried over | Rs. 40 | 0 | 0 | 49 0 0 |

| | | | | | | | |
|------------------|------------------------|----|---|---|----|---|---|
| | Brought forward....Rs. | 40 | 0 | 0 | 49 | 0 | 0 |
| Rafters..... | | 16 | 0 | 0 | | | |
| Bamboos, &c..... | | 4 | 0 | 0 | | | |
| | | | | | 60 | 0 | 0 |
| Tiles..... | | | | | 18 | 0 | 0 |
| Coir..... | | | | | 3 | 0 | 0 |

Labour.

| | | | | | | | |
|-----------------|-----|-----|---|---|----|---|---|
| Carpenter..... | Rs. | 12 | 0 | 0 | | | |
| Bricklayer..... | | 30 | 0 | 0 | | | |

| | | | | | 70 | 0 | 0 |
| Total.... | Rs. | 200 | 0 | 0 | | | |

Of the entire number of 1,036 towns and villages—

| | | | | | |
|-----------------------------------------|---|-------|-----|---|---|
| 3 contain upwards of 1,000 houses each. | | | | | |
| 13 | „ | „ | 500 | „ | „ |
| 12 | „ | „ | 400 | „ | „ |
| 18 | „ | „ | 300 | „ | „ |
| 37 | „ | „ | 200 | „ | „ |
| 170 | „ | „ | 100 | „ | „ |
| 783 | „ | under | 100 | „ | „ |

1,036 Total of villages.

The total number of houses amounts to 101,912: of these 42,547 are built of stone or burnt brick, and tiled; 13,776 are built of sun-burnt brick, and terraced; and 45,589 are built of mud or wattle and thatch.

As a general rule, the houses decrease in material and consistency from the plain to the hilly country, the villages in the former containing very few kucha huts, which are only inhabited by Mhars, and those of the latter containing only a few pukka houses, inhabited by the shopkeepers, the Patels, and the money-lenders.

Whilst thousands of rupees are expended according to taste on the premises of the chiefs and richer citizens, the price of a dwelling-house within the city walls varies according to the site from Rs. 100 to Rs. 500; the cost of an ordinary house in a village in the *Desh*, sufficient to accommodate a cultivator with his family and cattle, amounts, according to the following detailed statement, to Rs. 40, and a house can be erected in the jungly tracts at a trifling expense of Rs. 12.

The cost of a cultivator's house in the *Konkun*, to accommodate himself, his family, and his cattle, may be estimated as follows:—

| | |
|-----------------------------------------------------|-----------|
| 12 Merees or upright posts | Rs. 1 0 0 |
| 5 ridge poles..... | 0 8 0 |
| 150 rafters..... | 1 8 0 |
| 1,500 bundles of grass..... | 1 8 0 |
| 15 bundles of karwee, for making Kood or wall | 1 0 0 |
| 10 bundles of karwee, for Ombun..... | 0 8 0 |
| 20 men's labour for putting up the house..... | 3 8 0 |
| 4 men for making the floor..... | 0 7 0 |
| 4 ditto for plastering the karwee walls..... | 0 7 0 |
| Carpenter's labour..... | 0 8 0 |

Total cost of a house in the Konkun.....Rs. 10 14 0

The above is the cost of a house if the materials are purchased, but in the Konkun every man by his personal labour can procure a stock of wood and grass, &c., and when a sufficient quantity has been collected, he invites his friends to a feast termed by the Natives a Pownair, and the house is erected forthwith, at the very trifling expense of the food expended on the occasion.

The cost of a house in the Desh may be calculated as follows :—

| | |
|-------------------------------------------------------------------------------------|-----------|
| 4 Tooluees or beams | Rs. 3 0 0 |
| 100 rafters | 5 0 0 |
| 2 door frames, with shutters..... | 2 0 0 |
| Carpenter's labour..... | 2 0 0 |
| Bricklayers' labour..... | 4 0 0 |
| Bigarees' labour for making sun-burnt bricks, and assisting the bricklayers..... | 9 0 0 |
| Coir rope..... | 1 0 0 |
| Karwee | 1 0 0 |
| Sugar-cane leaves..... | 3 0 0 |

Total....Rs. 30 0 0

If thatched with grass..... 32 0 0

If tiled..... 42 0 0

KOLHAPOOR.—The city of Kolhapoor is situated in latitude 16° 19' N., longitude 74° 25' E., on the southern bank of the river Punchgunga, and, with its suburbs, occupies a circumference of about four and a half miles.

From all the current legends, Kolhapoor originally appears to have been a purely religious settlement, and the great shrine of Amba Bae in former ages towered only above a cluster of small temples, which now lies buried under the present town.

These ancient cloisters are frequently brought again to light, whilst making any extensive excavations, and to this day no well is allowed for the purposes of cultivation within the sacred bounds.

In the pages of the Kurweer Mahatma, Kolhapoor is described as the Kasee

(Benares) of the south ; the locality is still considered a Kshetra, and is held in high veneration by all Hindoos.

Besides the holy Hindoo fane of Amba Bacee, there are 251 temples, and many of note, both subterraneous and above ground ; every pool of stagnant water is designated Tirth, or sacred water, and the city and its vicinity is strewn with numberless mutilated images of Braminical and Jain worship, which are supposed to have been desecrated by the Mahomedan invaders, who ravaged the country in the thirteenth and fourteenth centuries.

An earthquake must have at one period anterior to the eighth or ninth century disturbed this peaceful retreat of superstition, overturning a great portion of the temples ; and the ample supply of water in the newly produced lake speedily induced the settlement of a resident labouring community, which located on a spot in a northerly direction, known under the name of Brumhupooree, where, according to tradition, a fort was built by a Chuthree Raja named Jaising, who held his court at Beed, a village about eight miles to the south-west of Kolhapoor.

Repeatedly driven from the situation of Brumhupooree by the ravages of epidemic disease, the great temple was resorted to as a place of refuge, and the present city gradually extended round it as from a centre.

From its vicinity to the fort of Punala, and central position in the southern provinces, the town rose to be of importance during the wars in 1700, between the rival descendants of the great Shivajee ; and on the separation in 1730 it became the head quarters, and has continued ever since to be the capital, of the younger branch of the Bhosley family.

The court was first removed to Kolhapoor during the reign of Shivajee, the grandfather of the present princes, in A. D. 1782, at which time the city was only surrounded by a mud wall, built by the voluntary labour of the inhabitants ; and in consideration of their services Shumbhajee Raja is said to have instituted a new levy, termed Kotekurees, or guardians of the fort, enrolling in its ranks those who had lent their aid in the construction of the work. The constant inroads which were made on the city by the Putwurdhuns afterwards induced the erection of more solid fortifications.

The original town, which is of a circular form, is surrounded by a stone wall, extending a mile and three-fourths. The walls average in height 30 feet, and from 10 to 26 feet in thickness ; 45 bastions are placed at regular distances, with battlements and loopholes, and a wide and deep ditch, with a rough glacis, encircles the entire space.

The six gates, three of which are double, are named after the fane, river, tank, or Peth to which they lead :—

The Gunga Wés.

The Shunwar Wés.

The Aditwar Wés.

The Mungulwar Wés.

The Wuroon Tirth Wés.

The Runkala Wés.

All these gateways, as usual in Muratha forts, are strongly defended, having

stout wooden gates, studded with long projecting iron spikes, intended to check the approach of elephants. The entrances are also over draw-bridges.

The town of Kolhapoor is now greatly overgrown, exceeding in circumference a distance of four miles and a half, and totally disproportionate as a capital to the extent of territory; but in later times the residence of a despotic Government, chiefs and officers flocked to the court; and the numbers were further swollen by the royal army and retainers required, according to the spirit of the nation, to be in attendance. About one-twelfth of the entire population of the State were thus huddled together in great discomfort, and as no sanitary measures were in force, the ravages of epidemics were severe; and in the year 1824, 8,000 people were carried off during the short period of a fortnight.

Within the fort no regularity has been preserved in the formation of the streets: the houses are built of brick, with tiled or terraced roofs, a confused mass of very ill-favoured buildings, forming a complete labyrinth of narrow lanes, not even sufficiently broad for the passage of a single cart.

Until lately, the city was indeed notorious for its filth,* which was allowed to accumulate in every corner, filling up the crevices of the rough pavements, emitting putrid effluvia, and generating disease and death.

Good roads, with side gutters, have, however, been now generally carried through the worst portions for a distance of upwards of twenty miles; the aqueducts have been repaired, and new fountains opened for use; trees have been planted along the lanes, and many other improvements have been made in cleansing and beautifying the streets. A voluntary emigration has been further induced from the fort, and upwards of 6,000 souls have settled themselves in the open suburbs, to the great comfort of all parties.

The Raja's palace, which stands in the centre of the town, is a spacious and commodious building, three stories in height, and containing about 200 rooms. It is built of brick, in the usual style of the country, and occupies three sides of a large fortified square, the western entrance into which is through a very chaste gateway, and surmounted by chambers, composed of slabs of basaltic trap, equalling the finest marble in the perfection of polish which has been attained. From the palace, the streets generally diverge as radii, and join concentric lanes running parallel to the outer walls; but the streets and lanes are all very narrow, and the high blank two and three storied stone walls on either side add greatly to the heat and non-circulation of pure air. A description is given under the head of antiquities of the great temple of Amba Bace, which is close to the palace, and stands in the centre of an oblong court, the principal entrance into which is from the west.

A new jail, capable of containing 200 prisoners, and 22 dhurmshalas,

* "We had the utmost difficulty to find clean footing for our horses, and I never recollect to have seen a town so extremely filthy in my life. I could not have conceived anything equal to it, and, even having seen it, I am incapable of describing it."—*Welsh's Military Reminiscences*.

capable of containing 7,000 travellers, together with other public edifices, have been lately built, and the following table gives the number and cost of the existing public buildings:—

| | | | |

The principal bazar, which is, however, indifferently supplied, and bears the appellation of Goozree, is situated in the centre of the fort, running east and west, and contains the shops of the principal bankers, cloth merchants, and jewellers; and besides the Goozree, daily bazars, well supplied with the produce of the country, are held in the different parts of the city.

The principal mosques are those of Syed Shah Jomalla Moozuruth Bookaray, and Syed Godun; but although of ancient date, they are very humble edifices.

The dwellings of the Sirdars, which are scattered over the town, occupy small squares, leading into each other, the buildings being generally erected on three sides of the front quadrangle, and the entrance being through a door in the fourth wall, which forms a portion of the street side.

The general style of architecture is massive, and suited for defence: the gateways are solid, and doors studded and banded with iron and brass, and the thick walls are made of stones and mortar. Small low windows without glass are placed only on the sides looking into the various enclosed courts, which together comprise the dwelling.

Beyond the walls of the fortified town there are six Peths, each bearing the name of the day on which the weekly market is held—the Ruveewar, Somewar, Mungulwar, Bhloodwar, Shookruwar, and Shunwur. Besides these, there are four hamlets attached, Kanapoor or Othraswar, Chundreshwar, Kasapoor, and Lugmapoor. The lanes in these suburbs are wide and open, and partially

lined with trees, which afford a considerable protection from the great summer heat.

To the south of the town are three large tanks,—the Runkala, Pudmala, and Wuroon Tirth,—which, besides being used for irrigating the gardens of His Highness the Raja, afford through aqueducts a tolerable supply of water to one portion of the inhabitants. The remainder of the population drink from the river, descending large flights of cut-stone steps, near which are erected the tombs and shrines of the princes and saints of Kollhapoor.

Of the tanks the Runkala is the largest, being about two miles and a half in circumference, and, according to oral tradition, a golden temple of Runk Buherow exists at the bottom of the lake, but invisible from the great depth of the water. The Jains, however, assert that the excavation was in the first instance made by their ancestors, and used as a quarry, from which the stones were supplied for the 360 Bustees (Jain temples) built by a Jain Raja, Gund Radith, the temple of Amba Bacc being one of the number; and that an earthquake subsequently increased its magnitude, and filled in the water.

Besides public buildings, and 22 dhurmshalas for the use of travellers, there are 6,363 houses in the city, of which 5,000 are built of stone and burnt bricks, 777 of sun-burnt bricks, and the remainder of mud. Many of the premises which belong to the chiefs and principal citizens are very extensive, and capable of affording sufficient shelter for 70 or 80 individuals.

The population altogether is estimated at 43,387 souls, calculated on a census taken of the living, and checked by the returns of mortality.

The annexed table exhibits the distribution of the population into castes :—

| | |
|------------------------|--------|
| Bramins | 7,170 |
| Jains..... | 1,185 |
| Lingayets | 2,030 |
| Murathas | 21,278 |
| Other Hindoo castes .. | 8,105 |
| Mahomedans | 3,619 |

Total population of the city of Kolhapoor.. 43,387

Beyond the usual trades and occupations to be met with in every community, there are none worthy of mention, excepting that of bringing wood in rafts down the river, which is a most tedious and dangerous occupation, and undertaken indiscriminately by all castes. Paper, snuff, and perfumes are also made in considerable quantities, and somewhat esteemed above similar manufactures in the adjacent districts.

Kolhapoor is not celebrated for peculiar eminence in any handicraft, with the exception of stone-cutting; and the masons and stone-cutters deservedly bear a high character for ability. Gold, silver, copper and brass-work are also

Daily Bazars.—No. of shops 628, amount of supplies sold Rs. 669-4-0.

The following languages are spoken in Kolhapoor :—

| | |
|--------------------|------------|
| Muharashtru. | Marwarce. |
| Canarese. | Telungnee. |
| Corrupted Dakhnee. | Drawed. |
| Goozrathee. | |

Besides the above, every trade has a slang language, called the Nund Bhasha.

The view of the city from the north approach is altogether very striking,

half surrounded as it is by hills, and encircled by patches of bright green cultivation, the palace of the Raja, with its towers and battlemented walls, rising high above the surrounding buildings, and towering like a citadel in the centre of the dark mass of buildings, which extends for about a mile on either side, till lost among the orchards of mango and palm trees.

Many portions of the suburbs belong to the Sirdars and Inamdars, and the bazars to a certain extent are under the control of the various Mukadums, but the general management is vested with the Kotwal, who daily holds his open Kuchery.

The gates are shut at 11 o'clock p. m., and private dwellings are closed at from 9 to 11 p. m. Parties of horse and foot are located in different parts, and nightly rounds of horse and Ramosecs are enforced for the protection of the city.

Besides one Government English school, containing 71 scholars, and two Murathee schools, containing 110 scholars, where the masters are selected alumni from the Elphinstone College, and where branches of education are taught, there are eight schools, where the mere rudiments of learning can be obtained on the payment of a small monthly fee of 8 annas.

PUNALA.—The hill fort of Punala is situated on the table-land of one of the mountain ridges, which runs at right angles from the great Western Ghauts, and which here retains an elevation of about 700 feet above the Kolhapoor plain. The summit of the fort reaches a further height of 275 feet, and the total elevation of the locality above the level of the sea is calculated to be 2,772 feet.

Abounding in abrupt rocky cliffs, which easily yielded to the perseverance of the mining ascetic, and possessing in luxuriance the convenience of pure air and spring water, Punala must have from remote ages been selected as a place for human habitation.

Three perfect rock caves still exist, and the remains of others which have been left unfinished point out the early retreat of the philosophizing Boodhist.

The gigantic work of scarping a distance of five miles followed the occupation of the hill by the Hindoo chief and his retainers, at a time when property required further means of protection; and in the fourteenth century, after the conquest by the Moslems, the ponderous gateway and the battlemented wall rose to supplant the earthen mound and the rough stockade which had hitherto sufficed to withstand the attack from bow and battle-axe.

The persevering industry which could finish the massive fortifications is really astonishing, and Punala formerly presented a perfect model of a hill fort, complete both by art and nature.

The natural scarp is generally a perpendicular of from 20 to 60 feet high all round, and was surmounted by a wall of solid masonry from 10 to 30 feet in height, following the original slope of the hill, and having good bastions on

all the salient angles. The entrances were through three magnificent double gateways, which were reached from the table-land by means of long flights of stone steps.

Two never-failing tanks and many springs of pure water afforded an ample supply of moisture ; whilst a considerable extent of fertile soil, and an abundance of cover, added all the advantages of the plain to the protecting height.

In the centre the old Polygar Citadel still remains, with its high walls, enclosing a tangled mass of luxuriant vegetation ; mango, jack, guava, sago, and coffee trees stand mingled together, with the pepper vine twisting among their branches ; and a magazine with three enormous stone granaries, built with arched roofs, and capable of containing provisions for a large army, a royal palace, with mosques, Eedgas, and temples, all remain, the monuments of former magnificence.

Gained by the great Shivajee, in the year 1660, through a stratagem of his faithful adherents, who endured a public affront and personal chastisement as a plea for desertion, and who, enlisting with the enemy, opened the gates during the night, this fort served as his best bulwark against the forces of Beejapoor. Here he was continually obliged to take refuge, and within the walls the mountain rat twice successfully withstood the entire power of the Moguls.

His son, the unfortunate Shumbhajee, greatly favoured the location, and added to its bastions ; and from this fortress, impelled by his licentious passions, he made his last rash sally, which ended in captivity and a miserable death.

From this cyrie Raja Ram and Shumbhajee of Kolhapoor made their frequent and fell descents on the surrounding country ; the energetic Jeejee Bacc held her distinguished court within the protected retreat ; and here Shivajee I. of Kolhapoor passed a peaceful childhood, and after a tumultuous career of forty years took refuge in his great day of need, when the disciplined battalions of Sindia had clustered in overwhelming masses round the walls of his capital.

Inscriptions in Arabic record the existence in 1376 of a Moslem settlement in the south-east side, which had been called Nubhapoor. The numerous burying-grounds scattered over the hill testify to the extent of the location ; but the generation has passed : Hindoo temples again rose over the crumbling mosques, and as the seat of the Kolhapoor Government, Punala reached the zenith of her prosperity about the year 1770.

On the removal of the Court to Kolhapoor in 1782, the population again dwindled to a small number, exclusive of the garrison, and in the continued fog the untenanted domicile soon fell into decay, and the ruins now form heaps of irregular mounds, covered with moss and turf.

The fort was entirely dismantled in 1845, but has been retained as the sudder station of the district. There is a weekly bazar on the hill, which is highly prized as a refuge from the suffocating heats of the plain during the months of April and May. With the exception of the monsoon months, the

climate is delightful: the days cool, and the nights temperate, without the extremes experienced in the plains; and the cholera, which is so often fatal below, has never reached the inhabitants of these upper regions.

The tanks are full of fish and turtle; many large trees flourish in shady clumps; various parts of the fort are under cultivation; the houses are substantially built; and altogether a general appearance of comfort and fertility is apparent throughout.

There are 217 houses, containing a resident population of 1,339 souls, with one Government school, having an attendance of 33 scholars.

Immediately under the protection of the fort guns, four Warees have sprung up, containing 297 houses, with a population of 1,580 souls.

GUR INGLUZ.—The town of Gur Ingluz was, in consequence of a scarcity of water, removed about 250 years ago to its present site on the banks of the river Hurnkasee. Like all other towns in Kolhapoor, it suffered greatly during the long wars, and more especially at the hands of the Putwurdhun Konher Rao, and the Chief of Nepance. The fort, which was originally erected about the year 1700, by an ancestor of the Kapsee family, is now in ruins.

The town contains 627 houses, with a resident population of 3,022 souls, the majority of whom are Lingayets of a peculiar sect, who worship Shiva. A Government school has been established with considerable success, and in the small bazar, which is held on Sunday, plentiful supplies of rice and other grains are to be had.

There is no building of any pretension, and as the wells are all brackish, the river water is used by all.

The villagers have derived great benefit, and appear highly satisfied, from the selection of Sherole as the head quarters of a Mamlutdar, as the arbitrary fines and system of Veth or unremunerated labour formerly obtaining have been discontinued, and rest from plunder ensured to the town, which is increasing in size.

SHEROLE.—The town of Sherole boasts of an authenticated existence of upwards of 700 years, and, situated on the frontier, stood the brunt of the border feuds between Kolhapoor and the Putwurdhun, alternately occupied by the contending parties: it was ultimately secured in the year A.D. 1780 by Shivajee III., and has ever since remained in the undisturbed possession of Kolhapoor, and has frequently been selected as the temporary residence of the royal family.

The town, which is situated near the junction of the rivers Krishna and Punchgunga, contains 762 houses, with a resident population of 3,180 souls, the majority of whom are Mahomedans. It is surrounded by a stout wall, with ditch, and an inner citadel has been constructed for greater defence.

A bazar is held on Saturday, when produce to the value of Rs. 200 is disposed of, consisting chiefly of grain and cotton thread.

With one exception, the well-water is brackish, and the people are obliged to have recourse to the river, which runs at a distance of about a mile from the town.

In the suburbs the remains still exist of a handsome mausoleum, which was built 500 years ago by Noor Khan, an officer of the Mogul Emperor, and in the town five very sacred Hindoo temples are in good preservation, and one especially, called Bhojiaputru, and dedicated to Duttatruyu, an incarnation of Shiva. The temple contains only a simple stone slab, indented with a foot-mark, and a stone vessel is preserved, which is said to have been used by the god, who formerly resided in person under the roof.

The mausoleum was destroyed in the year A. D. 1777 by Purushram Bhawoo, who carried off the materials for the construction of the fort of Meeruj.

Although now enjoying perfect peace and quietude, the inhabitants sigh for the ancient days of border warfare, the loss of active employment in troublous times, and the profit attending the presence of large armed bodies, and the barter of ill-acquired property.

The town of Sherole is exposed to severe thunder-storms during the hot season, and experiences great vicissitudes in the monsoon rains, so that although the surrounding land is good and rich, large remissions are invariably required for partial failure in the crops.

MULKAPPOOR.—The pretty little town of Mulkapoor, containing about 3,000 inhabitants, has sprung from one of the suburbs of the old locality; and is pleasantly situated in a bend of the river Shalee, under the shade of venerable trees. It contains about 500 houses, arranged in somewhat more regular streets than customary, well built, and tiled.

A large bazar is held on Friday, when upwards of 3,000 people assemble from the adjoining countries, and merchants attend to transact business from the sea coast, and from the large towns on the river Krishna.

With the exception of the Punt Pruteeneedhee, there are, however, no men of substance, and the Durbar is attended chiefly by Bramins enjoying small Inams, who quitted their houses when the fort of Vishalgur was dismantled.

Three schools have been lately established, and the attendance of 60 scholars obtained.

The houses are of no size, seldom reaching two stories in height, and the premises of the Punt present no great difference, excepting in extent, to those inhabited by other inhabitants.

BOWRA.—The secluded situation of the fort of Bowra has preserved it from any very frequent attack. Taken and placed in repair by Bhugwuntrao Sahab Punt Amatya, about the year 1700, it was subsequently besieged unsuccessfully by an officer of the Peshwa, who was killed during the fight, and it has since enjoyed an undisturbed peace from foreign aggression, sufficient to induce the Punt to build a residence, and found a new locality of the same name, on the crest of the hill overlooking the Konkun, and at a distance of a mile from the fortifications of the old fort.

The effects of the monsoon are most severely felt at this place, to the destruction of vegetable as well as animal life: 180 inches of rain are frequently measured as falling during the month. Fever is very prevalent in

consequence, and the common rose tree rapidly decays in the damp atmosphere.

Until latterly, the adjacent heights were covered with thick jungle, affording shelter to numerous bands of thieves, who, under the favour and protection of the chief, effectually disturbed the peace of the country.

The new town of Bowra contains 196 dwelling-houses, which are chiefly thatched, with a resident population of 925 souls. A vernacular school and a goodly domicile belong to the Punt. There is an abundance of excellent water: and a weekly bazar, which is held on Thursday, is well attended, from both above and below the Ghauts, and supplied with every description of grain.

A detachment of Kolhapoor infantry has since the year 1848 been stationed with benefit at Bowra, which is the head quarter station of the estate. Robberies have been entirely stopped, and quiet is thoroughly ensured throughout the district.

BHOODURGUR.—Previous to the construction of the fort, the hill of Bhoodurgur was considered sacred, and possessed shrines dedicated to Kedarling, Buherow, and Jukhroobace, and at the foot of the hill a small hamlet only was inhabited by the attending Goorows, who were occupied in the worship and festivals held in honour of the deities.

The fort was repaired and placed in excellent order by the great Shivajee about the year 1677, but was shortly afterwards captured by a Mogul army. Held for a term of four or five years, the Gurkurees succeeded in retaking the place, when the Mogul general was killed in the conflict, and his standards, which fell into the hands of the victorious party, were presented to the temple, where they are still preserved.

The Gurkurees afterwards yielded up the fort for a sum of money to Purushram Bhawoo Putwurdhun, who held the place for about ten years, when the Kolhapoor Government again recovered possession, and have ever since retained it, notwithstanding sundry efforts on the part of Purushram, who was completely defeated, together with Gopal Punt Aptay, who had been despatched for a similar purpose by the Chief of Inchulkurunjee.

Of five flourishing Peths which formerly existed round the fort, two have been entirely deserted during the wars, and bazars are now held in the three remaining ones, which are, however, considerably diminished in importance, there being at present only 75 houses within the fort, and 350 houses in the Peths, containing a population altogether of about 3,000 souls, consisting chiefly of tailors, traders, and cultivators.

A fine tank was constructed in former days on the top of the hill, at a cost of Rs. 5,000, the proceeds of an intestate property belonging to a resident Sowkar; a commodious granary, together with an excellent court-yard and palace, were also subsequently erected, but the Raja of Kolhapoor never resided here.

The fort was latterly selected as the head quarters of the district, and the residence of the local authorities, on account of its elevated site over the valley

of the river Hurnkasee, which is proverbially unhealthy to foreigners, and which only contains hamlets of very moderate size, whose denizens are employed in the cultivation of rice.

Besides the usual public buildings, the fort boasts of a temple dedicated to Buherow, which is a fair specimen of architectural design, together with a temple of the goddess Bhowanee, which is used as a dhurmshala.

KAGUL.—Kagul, the principal town of the Jageer belonging to Jysing Rao Ghatgay Surjerao Wujarat Mab, contains 800 houses, and a resident population of 4,277 inhabitants, principally Shoodras.

The town is pleasantly situated in the valley of the Doodgunga, about a mile from the banks of the river, and is surrounded by rich garden ground, sheltered by fine old mango trees. Bazars are held twice a week, on Monday and Thursday, when quantities of grain are exposed for sale, and when a large assemblage takes place from the adjacent villages.

Jysing Rao has lately built a commodious residence within the town, after the model of the famous palace of Deeg, and several relations of the family also possess comfortable dwelling-houses within the walls. A vernacular school has been established under the auspices of the chief, who has also entertained an establishment for the introduction of vaccination.

The trunk road from Satara to Belgaum passes through the town, which has of late years been greatly cleansed and improved under the management of its intelligent Karbhiaree, Goolam Ghous Khan.

Of ancient date, and possessing sunuds of the thirteenth century, Kagul can boast of no entire building of any antiquity, although ruins of temples and mosques are met with in abundance; but the town has suffered greatly from the prevailing absentee system, the master being permanently located in Hindustan, and also from its vicinity to Kolhapoor, having been sacked and partially burned more than once by the Chutruputee Rajas during the last fifty years.

The present fort, which is outside the town, and a place of little strength, was built by Jysing Rao about thirty years ago, on the site of the former fortalice, which was destroyed about the year 1780 by Yeshwunt Rao Sinday of Kolhapoor.

Good carpets are manufactured in Kagul, which is also celebrated for its sugar and frankincense.

ALTE.—The town of Alte is situated on an extensive plain, in the valley of the river Warna, and about six miles from its banks.

The town is embosomed among old trees, and enjoys a pleasant aspect, being well sheltered by a range of hills from the easterly winds. It has enjoyed an existence for upwards of 800 years, though selected as the head quarter Thanna only during the administration of Jeejee Bace Saheb, during the year 1765.

Like other frontier towns, Alte has suffered greatly during the continued feuds with the Putwurdhuns, and the Chief of Nepance: the environs

frequently formed the battle-ground between the contending parties, and it was twice plundered and burnt to the ground.

The present town contains a population of 3,136 souls, dwelling in 415 houses, chiefly composed of sun-dried bricks and tiles : the Mamlutdar of the district resides here, and the inhabitants chiefly depend upon wells for their supply of water.

About a mile from the town stand the famous temples now dedicated to Shiva and Alum Prubhoo.

Originally hewn out of the rock by the followers of Boodh, they have been successively added to by Jains and Bramins, and now present a strange and incongruous appearance of every variety of embellishment used by the votaries of the different religions.

The sanctity of the spot, however, continues intact, and this is one of the few places in Western India where the devotees of Shiva believe they can immolate themselves in the vestibule of the temple, under a certain prospect of entire happiness in a future state.

The town of Alte is famed for the superior qualities of the cotton and sugar grown in the immediate vicinity.

POPULATION.

Although still containing a remnant of the Mahomedan families who settled in Kolhapoor during the Mogul occupation, the mass of the inhabitants are Hindoos, separated into four great classes, but, as usual, innumercably subdivided.

They may be described as hardy, brave, and active, though cunning and treacherous ; short, but well made, with coarse features ; and are strictly a rural nation, which may account for the simplicity of manners so engaging to the fancy of olden writers.*

They, however, possess as many good qualities as can be expected from a people who have been accustomed to oppression, and whose country has been for centuries the scene of anarchy and strife ; and even those individuals who formerly composed the superabundant body of militia, and whose instinctive restlessness of character was increased by their marauding life, were chiefly kept together in the field by the hopes of plunder ; and the evil was greatly corrected by a politic allotment of lands, when the individual plot of ground as a homestead served at all times as a great incentive to industry, and the property, small as it invariably was, proved an inducement to honest labour.

The middle and lower classes are frugal and industrious : they are more independent and less priest-ridden than in the adjacent countries, and as the Bramins mixed more with the people, and engaged in all the offices

* Le pays des Marates généralement est ouvert. Le peuple gai, fort, et plein de santé, ne compte que sur son courage et ses armes. Leur force principale est dans la cavalerie. L'hospitalité est leur vertu dominante. Le pays me sembloit être celui de la nature. Je croyois presque en parlant aux Marates converser avec les hommes du premier âge.—*Anquetil du Perron.*

of State and even in the army, the reverence for this class has sensibly diminished.

The higher classes are profligate and extravagant, fond of intrigue and sensual enjoyment, and all being plunged in debt, are too apt to disgrace themselves in endeavouring to support a condition above their means.

Although accused of general infidelity, the women are well treated, and many of the higher classes are kept behind the Purdeh, but it is little if any disgrace to appear in public.

The entire population, according to a census which was taken with great care, and which was checked by personal inspection, and reports of deaths from various localities, amounts, as given in the following abstract, to 546,156 souls, inhabiting 791 towns and villages, containing 101,708 houses, and this amount is in accordance with the rate of five souls to a house, and about 100 to the square mile, given by Mr. Elphinstone for the adjacent country of the Southern Konkun:—

Table of Population.

| No. | Districts. | Number of Inhabitants. |
|----------|--------------------------------|------------------------|
| 1 | Kolhapoor city | 43,387 |
| 2 | Kolhapoor Peta | 53,915 |
| 3 | Alte | 43,518 |
| 4 | Sherole | 50,152 |
| 5 | Punala... .. | 63,974 |
| 6 | Bhoodurgur | 46,303 |
| 7 | Gur Ingluz... .. | 54,910 |
| 8 | Vishalgur | 14,748 |
| 9 | Bowra | 29,845 |
| 10 | Jageer of Jugut Gooroo | 9,299 |
| 11 | Ditto of Raojee Maharaj... .. | 577 |
| 12 | Ditto of Tatia Maharaj | 1,454 |
| 13 | Ditto of Josee Rao | 616 |
| 14 | Ditto of Surlushkur | 4,167 |
| 15 | Ditto of Himut Bahadoor | 8,056 |
| 16 | Ditto of Juktun Moolk | 570 |
| 17 | Ditto of Gujendrugurkur | 1,661 |
| 18 | Ditto of Bheem Bahadoor | 488 |
| 19 | Estate of Kapsee | 8,035 |
| 20 | Ditto of Toregul | 30,000 |
| 21 | Jageer of Narayen Rao | 3,352 |
| 22 | Estate of Walwa | 3,075 |
| 23 | Ditto of Duttwar | 1,157 |
| 24 | Ditto of Kagul | 28,290 |
| 25 | Jageer of Raj Oopadhey | 1,000 |
| 26 | Estate of Inchulkurunjee... .. | 43,547 |
| Total... | | 546,156 |

Of the above number of 546,156 souls, 224,405 are male adults, and 210,527 are female adults; 58,597 male children, and 52,627 female children.

Statement of Wandering Tribes within the Territory of

| Designation of Tribe, or Subdivi- sion of Tribe, | Number of said Tribe. | | | | | Range of Country generally gone over by the Tribe in its wandering. | Head Quarters of the Tribe, if any, during the Rainy Season, or else original seat. | Ostensible Occupation or Trade; also if merely believed to be a pretence, and grounds for such belief. | Religion and Caste. |

| 35. Pichatee .. | 11 | 21 | 19 | 12 | 63 | Hooblee, Dharwar, Belgaum, Nur- goond, & other places. | They pass the rainy season at Inchul- kurunjee. | They are beggars by profession. | They are Hindoos, Ambabae and Sutwae (god- desses) being their favourite objects of worship. Their caste is Koodvee. |
| 36. Ramosee .. | 24 | 21 | 13 | 11 | 69 | Poona, Belgaum, Satara, & other places. | They pass the rainy season in the Kol- hapoor country. | Some of them are village watchmen, while others are labourers. | They are Hindoos, Khundoba being their favourite ob- ject of worship. Their caste is Ra- mosee. |
| 37. Wassoodeo. | 6 | 1 | 1 | 2 | 10 | Belgaum, Poona, Dharwar, Sata- ra, the Car- natic, and other places. | They pass the rainy season at Bhen- dowday, in the Kolhapoor terri- tory, Nepanee, Azra, and other places. | They support them- selves by begging alms. | They are Hindoos, the goddess Maha- kalee being their favourite object of worship. Their caste is called Wassoodeo. |
| 38. Wud | 214 | 192 | 103 | 107 | 616 | Kolhapoor, Mee- runj, and other places. | They pass the rainy season in the Kol- hapoor Ilaka. | They quarry, and supply stones. | They are Hindoos, Venkoba being their favourite ob- ject of worship. Their caste is call- ed Wud. |

| Marriage and Funeral Customs and Ceremonies. | Whether they intermarry with other Tribes, and if so, with what. | Whether any other parties of the Tribe exist, and if so, where they are now believed to be. | Social System, viz. whether they have a recognized Head of the Tribe, or a common Head of the Subdivisions of Tribes. | General Remarks. |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|---------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| They bury their dead. | They do not intermarry with other tribes. | Other parties of the tribe exist in different parts of the country. | They have a recognized head of the tribe. | They are pick-pockets and shop-lifters. There is a peculiar custom among them—for the bride and bridegroom to touch and continue to hold a wooden pestle during the time the ceremony of marriage takes place. |
| They practise bigamy, and pay for their wives. They bury their dead. | Ditto | ditto..... | Ditto ditto..... | |
| They practise polygamy, and pay for their wives. Sometimes they burn, and sometimes bury their dead. If they can afford the expense, they do the former, if not the latter. | Ditto | ditto..... | Other parties of the tribe exist at Bowra, and other places. | |
| They practise bigamy, and pay for their wives. They bury their dead. | Ditto | ditto..... | Other parties of the tribe exist in different parts of the country. | |
| They practise polygamy; sometimes they receive, and sometimes pay money for their wives. They bury their dead. | Ditto | ditto..... | Other parties of the tribe exist in Chikoree and other places. | |
| They practise polygamy, and pay for their wives. They bury their dead. | Ditto | ditto..... | Other parties of the tribe exist in different parts of the country. | |
| | | | Some of the tribes have a recognized head, while others have not. | |

No. 2.

*Supplement to Statement No. 1, of Wandering Tribes not mentioned by
Captain HERVEY.*

| Names. | Detailed Information regarding Habits and Customs. |
|----------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Komtee. (Vide No. 21 in Statement No. 1.) | Adorned with thick necklaces, made from beads of the Toolsee tree, these people frequent fairs, taking with them a stick surmounted by a brown cloth flag, together with a pair of Cheepcees, small wooden castanets. They sing prayers either in the temples, or among the crowd, and whenever they find an opportunity, they cut away with considerable dexterity the pocket of the unwary bystander. They also sit on spots frequented by the pilgrims as encamping ground, and, with patches of cloth tied on parts of their body and legs, pretend to be diseased, sing prayers, and beg alms. When the attention of the men is diverted from their operations, they steal anything they can lay hands upon, and make off. They are ostensibly beggars, but sometimes have a supply for sale of looking-glasses, glass beads, lanterns, flat stones, &c. and many also carry about written certificates, stating that their tongues have been cut off by robbers, and that they are proper objects of charity. From constant practice, they manage to draw their tongues entirely out of sight when the mouth is opened, and as objects of charity they are enabled to enter houses, where they acquaint themselves with the nature of the passages, and with the general condition of the inmates as regards property. |
| 2. Beldar. (Vide No. 3 of do.) | Beldars generally repair with their women and children to fairs, or to those parts of a river side where people assemble, either for the purpose of crossing or washing themselves. They manage to draw upon themselves the attention of the men, whilst their children carry off any things that may be lying about. Some of the gang also behave indecently before the women, and whilst the latter turn away their faces, ample opportunity is afforded to make off with any things that may happen to lie near. |
| 3. Matee Wud. (Vide No. 26 of do.) | Ditto ditto ditto ditto. |
| 4. Nakadoloechey Wyed. (Vide No. 29 of do.) | These quacks wander about with bags hanging on their shoulders, containing a number of cocoanut shells filled with different drugs, and although the drugs are of a very inferior quality, still they pass as good and efficacious medicines on the ignorant who seek advice. If an invalid who lives by himself be found in their beat, they offer to give him medicine, and reside with him on the pretence of better attendance. They remain with him for some time, treating his distemper, and after ascertaining the extent of his property, give information to their companions, and on an appointed night the house is robbed, and the gang decamp. |
| 5. Helvoc. (Vide No. 16 of do.) | They dress themselves in quaint gaudy dresses, and ride in the morning to beg alms on richly ornamented bullocks. They profess to tell without any previous knowledge the names of all the inmates, together with the entire line of all the ancestors of the house where they beg; and whilst engaged in this work, they acquaint themselves with the doors and passages, and, in company with the Mangs and Ramosees, afterwards assist in committing the gang robbery. By themselves they commit burglaries and petty thefts. |
| 6. Pathroot. (Vide No. 33 of do.) | These are swindlers, and drive a trade in false ornaments made of gilt brass, which they expose for sale as gold on the high |

| Names. | Detailed Information regarding Habits and Customs. |
|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | roads, or in jungles, or at the mouths of valleys, where there is any constant influx of people. A plausible falsehood is generally told to the purchasers, that family disputes enforced the necessity of disposal, and some of the parties offer to stand security in case the ornaments are proved to be stolen property. They, however, do not commit any other offence. |
| 7. Oopar. (Vide No. 31 in Statement No. 1.) | These people dress themselves like Murathas, wear large necklaces of beads, and sit at a ford by the river side, counting their rosaries, and pretending to be absorbed in prayer and meditation. They watch for their opportunity, and make off with any stray articles belonging to the travellers encamping on the same spot. |
| 8. Balsuntosh. (Vide No. 2 of do.) | These people go about with a variety of cloths thrown over their bodies, and a cast of the goddess Sutwace held in their hands. They enter houses, and promise to procure the gratification of all wishes, either for children, or success in any undertakings; and after sufficiently working on their credulity, they induce the inmates to leave their houses to purchase certain articles, such as silk, limes, &c. required as adjuncts for accomplishing the desired object, and they are then at liberty to steal anything that falls in their way, and run off. They also beg alms. |
| 9. Nad Luxamee Walley. (Vide No. 28 of do.) | They put on long coats, called Zugas, besmear their foreheads with Koonkoo, allow their hair to grow luxuriantly, and, with flutes in their hands, hollow brass rings filled with small pieces of stone on their thumbs, and carrying long whips, they stand before houses, and dance and play upon the flutes, shaking their thumbs, and pretending to beat their own backs with the whips. Altogether they produce a great noise and confusion, and spectators are soon collected around them. While they are performing this show, their wives and children mingle among the crowd, and run off with any article which is left unguarded near the house, or indeed within the house, should attention be well engrossed with the show. They also beg alms, and belong either to a Mang or Mahur cast. |
| 10. Murathey Nuts. (Vide No. 25 of do.) | These people assume the disguise of Gosavees, called Dusnamees, who are generally traders, and give themselves out to be merchants. They obtain information of some single traveller progressing with any valuable property, and after he has left his halting-place they meet him on the road, and, inquiring his destination, declare their intention of going to the same place, or to some other adjacent commercial town. They proceed in company for two or three stages, when they administer an intoxicating drug in the food, and while the victim is under its influence, they rob him and decamp. They commit many robberies, and sometimes murders, on unrequented roads. They also swindle people, by promising to show them treasures hidden by their ancestors, and after digging the floor about knee deep, they declare that the treasure has fled to some other place. Goats, fowls, limes, &c. are then given for the purpose of performing ceremonies for the removal of the devil, who is said to be sitting over the treasure, and when everything is obtained which can be got from their dupes, they perform some unmeaning rites, and then manage to leave the premises. |
| 11. Korvee. (Vide No. 22 of do.) | These people enter villages under the pretence of selling baskets, brooms, &c. and obtain information regarding the houses, and the amount of property supposed to be contained. They also pilfer any article that comes in their way. |

| Names. | Detailed Information regarding Habits and Customs. |
|-------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12. Ramosees. (Vide No. 36 in Statement No. 1.) | In addition to their professions of village watchmen and labourers, the Ramosees also cultivate land. To obtain information regarding easy access to dwelling-houses, they assume various disguises: one generally dresses himself as a respectable Muratha, mounts a horse, and, taking with him several of the tribe as attendants, proceeds to a strange village, and remains as a traveller at the house of some villager for a day or two, where his time is employed in procuring sufficient particulars for the ensuing attack. Similar information is also obtained from the village watchmen who belong to the tribe, and who receive a share of the spoil. Old infirm persons are also dressed in rags, and sent to different villages for information. The tribe generally commit thefts, burglaries, and gang and highway robberies; they also steal cattle and crops off the fields. Their children also commit petty thefts. Like the Murathas, they eat fish, fowls, and the flesh of goats and deer. |
| 13. Dowree Gosavee. (Vide No. 11 of do.) | These Gosavees, with their wives and children, steal the crops off the fields. They commit thefts, burglaries, gang and highway robberies. They also assume various disguises of beggars, Gosavees, &c. to procure the information necessary for the successful commission of their depredations. They have no permanent lodgings, but wander among the different villages, and generally encamp near water in the jungle, where they sit under the shade of thick cloths erected for the purpose. They keep their weapons near them at night, but are unarmed during the day time. They eat fish, fowls, and the flesh of goats, wild cats, foxes, &c. but not of cattle. |
| 14. Phansay Pardhec. (Vide No. 34 of do.) | These wander among villages, and have no fixed habitations, but encamp at a distance under small cloth tents, with their wives and children. They steal the crops off fields, and commit petty thefts and burglaries. They catch deer, hares, and wild animals with snares, and, while selling their flesh in villages, manage to procure information requisite for successful plunder. |

EMPLOYMENT.—Of the total amount of 546,156 population, consisting of 522,110 Hindoos, and 24,046 Mahomedans, 276,456 belong to the agricultural class, and the remaining 2,69,700 may be divided as follows:—

| | | | | | | |
|--------------------------------|----|----|----|----|----|--------|
| Sirdars and 1st class Inamdars | .. | .. | .. | .. | .. | 572 |
| 2nd class Inamdars | .. | .. | .. | .. | .. | 13,149 |
| Priests | .. | .. | .. | .. | .. | 2,379 |
| Karkoons | .. | .. | .. | .. | .. | 7,792 |
| Bramin Bankers | .. | .. | .. | .. | .. | 1,187 |
| Ditto Servants | .. | .. | .. | .. | .. | 858 |
| Ditto Beggars and Idlers | .. | .. | .. | .. | .. | 7,170 |
| Sowkars | .. | .. | .. | .. | .. | 1,130 |
| Traders and Shopkeepers | .. | .. | .. | .. | .. | 24,442 |
| Manufacturers | .. | .. | .. | .. | .. | 33,717 |
| Artizans | .. | .. | .. | .. | .. | 24,969 |
| Sepoys | .. | .. | .. | .. | .. | 26,963 |
| Labourers | .. | .. | .. | .. | .. | 45,869 |
| Shepherds | .. | .. | .. | .. | .. | 11,069 |

| | |
|----------------------------------------|---------|
| Different professions | 7,651 |
| Gurkurees holding small Inams | 10,554 |
| Beggars | 4,977 |
| Inferior and predatory classes | 45,252 |
| Total.. .. | 269,700 |

The Sirdars and Inamdars pass their time in a surveillance of their estates, in administering civil and criminal justice, in attendance at the Durbar, and on His Highness the Raja on any progress from the palace, and in frequent visits of ceremony to their friends.

The priests find a sufficient employment in their abstract studies, and in the performance of religious rites and ceremonies, both public and private.

The Bramins may be divided into 7,792 Karkoons, 1,187 Shroffs, and those engaged in trade, 858 servants to the caste, 7,170 Bhuts and beggars, or those living on voluntary charity.

The Bankers may be divided into three classes, varying, however, only in the extent of their means. Their occupation is similar, consisting chiefly in usurious dealings, and in a trifling trade in jewels, fine cloths, and musk.

The shopkeepers may be divided into venders of grain, cloth, and hardware, oil, sweetmeats, horse furniture, children's dresses, and brass vessels, but the shopkeeper seldom restricts himself to the sale of any individual commodity, and the store generally contains all the articles usually required on the days when a public bazar is wanting. The shopkeepers, and more especially the village grain-sellers, have further occupation in transporting their produce from village to village, and to the ports on the sea coast.

The following table shows the number and description of shops throughout the State :—

| | | | |
|------------------------------|-----|----------------------------------|-----|
| Shroffs | 171 | Jingur, horse gear | 48 |
| Bunias, grains, &c. .. . | 857 | Kurujgar, fine metal work .. . | 5 |
| Ready made cloth articles | 178 | Haberdashers.. .. . | 14 |
| Tamboolees, betel leaves .. | 276 | Putvègars, tassels, and silk net | |
| Kasars, copper & brass ware | 24 | work.. .. . | 14 |
| Founders in metal.. .. . | 20 | Shoes and sandals | 263 |
| Confectioners | 38 | Kasars, glass bangles.. .. . | 174 |
| Perfumers | 65 | Snuff dealers.. .. . | 45 |
| Green grocers | 68 | Sculptors, images of earth and | |
| Opium and bhang.. .. . | 6 | stone.. .. . | 5 |
| Coarse hardware | 40 | Sungars, cumbles | 364 |
| Paper | 27 | General stores | 39 |
| Gold and silver work | 685 | Baskets | 98 |
| Liquor | 300 | | |

Meat, fruit, and vegetables are sold in the daily bazars.

The manufactures of Kolhapoor are confined to coarse cotton cloth, woollen cumblees, sugar, oil, paper, snuff, liquor, very indifferent perfume, and the other articles mentioned in the following statement, which includes the number of individuals employed in each manufactory :—

| | | | | | | | |
|----------------------|----|-------|---------------------|--------|----|----|--------|
| Weavers of cloth.. | .. | 7,671 | Gunny | .. | .. | .. | 267 |
| Oil | .. | .. | 3,842 | Thread | .. | .. | 566 |
| Jagree and sugar.. | .. | 1,764 | Ink | .. | .. | .. | 110 |
| Distillery of liquor | .. | 2,850 | Broad tape | .. | .. | .. | 264 |
| Glass bangles | .. | 730 | Dyeing | .. | .. | .. | 30 |
| Paper | .. | 666 | Snuff.. | .. | .. | .. | 154 |
| Rope | .. | 235 | Trenchers of leaves | .. | .. | .. | 2,293 |
| Smelting iron | .. | 130 | Cumlees | .. | .. | .. | 5,180 |
| Bricks | .. | 313 | Confectionery | .. | .. | .. | 526 |
| Lime | .. | 344 | Baskets | .. | .. | .. | 640 |
| Charcoal | .. | 226 | Pottery | .. | .. | .. | 3,711 |
| Leather | .. | 715 | Perfumery | .. | .. | .. | 265 |
| Carpets | .. | 225 | | | | | |
| Total. | | | | | | | 33,717 |

Many of the artizans have acquired considerable proficiency in their arts : the masons and stone-cutters bear a high character for ability. Gold, silver, and brass-work is executed with neatness, and embroidery and saddlery have reached a fair standard of excellence. The following table gives the number of individuals employed in the various descriptions of handicraft :—

| | | | | | | | |
|------------------------|----|-------|-------------------------|----|----|----|--------|
| Bricklayers and masons | .. | 931 | Sikulgurs | .. | .. | .. | 286 |
| Carpenters | .. | 5,475 | Embroiderers | .. | .. | .. | 11 |
| Shoemakers | .. | 3,438 | Coppersmiths | .. | .. | .. | 249 |
| Goldsmiths | .. | 3,528 | Sawyers | .. | .. | .. | 233 |
| Tailors | .. | 1,505 | Cotton and wool-carders | .. | .. | .. | 356 |
| Stone-cutters | .. | 1,456 | Wood-hewers | .. | .. | .. | 253 |
| Washermen | .. | 2,002 | Tassel-makers | .. | .. | .. | 143 |
| Barbers | .. | 2,387 | Whitesmiths.. | .. | .. | .. | 213 |
| Jingurs | .. | 463 | Quarrymen | .. | .. | .. | 871 |
| Blacksmiths | .. | 1,169 | | | | | |
| Total.. | | | | | | | 24,969 |

Independent of the quota of 821 men, horse and foot, who have been organized, 2,850 sepoys are employed in the various duties of guarding the jails and treasuries, protecting passes and bazars, furnishing escorts, and collecting the revenue, whilst 10,554 men enjoy lands for militia service, and are liable to be called out on any emergency.

Besides the cultivation of the ground, and rendering assistance in the various trades, ample employment is found for the labouring class in furnishing supplies of grass, wood, and charcoal.

Exposed to all weathers by day and night, the shepherds, whilst tending their numerous flocks, seldom enjoy the luxury of a roof; a broken wall suffices as a protection from the drifting sleet, and a few loose stones serve as a couch to admit the falling rain to pass between the interstices.

Different Professions and Occupations.

| | | | | | | | | |
|----------------------------------|----|----|----|----|----|----|----|-------|
| Doctors | .. | .. | .. | .. | .. | .. | .. | 201 |
| Puntojees | .. | .. | .. | .. | .. | .. | .. | 250 |
| Horse-breakers | .. | .. | .. | .. | .. | .. | .. | 217 |
| Magicians | .. | .. | .. | .. | .. | .. | .. | 279 |
| Tumblers | .. | .. | .. | .. | .. | .. | .. | 334 |
| Zarces | .. | .. | .. | .. | .. | .. | .. | 114 |
| Sculptors | .. | .. | .. | .. | .. | .. | .. | 438 |
| Murathee and Hindustanee writers | .. | .. | .. | .. | .. | .. | .. | 487 |
| Gardeners, &c. | .. | .. | .. | .. | .. | .. | .. | 495 |
| Betel leaves sellers | .. | .. | .. | .. | .. | .. | .. | 138 |

| Singing and dancing women | .. | .. | .. | .. | .. | .. | .. | 635 |
| Bheasties | .. | .. | .. | .. | .. | .. | .. | 250 |
| Boatmen | .. | .. | .. | .. | .. | .. | .. | 325 |
| Fishermen | .. | .. | .. | .. | .. | .. | .. | 56 |
| Prostitutes | .. | .. | .. | .. | .. | .. | .. | 2,283 |
| Total.. | | | | | | | | 7,651 |

Of the various professions and occupations mentioned, few have attained any superior excellence. The doctors are not very highly versed in the art of healing, and only one pretends to any skill in surgery. His operations, however, though rough, are often successful. The medicines used are chiefly procured from the district, as a prejudice exists in administering any substance foreign to the country of the patient. A list of the medicines has been already given among the productions. Although consulted on all occasions, the doctors only receive fees on the treatment of important cases, which are fixed from Rs. 10 to Rs. 150, according to the danger. In ordinary cases, advice is gratuitously given to the poor, who are acquainted with the names of the simple substances used in colds and fevers, and slight attacks of illness.

The Puntojees confine themselves to the simple rudiments of learning. The horse-breakers ride well, and teach according to the Native manner. They are the descendants of a very numerous class, who had continual employment among the masses of cavalry which in former days existed in the Kolhapoor army. The magicians are well versed in Muntras, and drive a brisk trade by very gross imposition on the credulity of the inhabitants. The tumblers perform the usual juggling feats, and dance on the tight-rope. They are not esteemed as altogether a very honest race.

The Gorkurees and Putuks are the descendants of the original soldiery of the great Shivajee, and their families have held from generation to generation an undisturbed possession of their land grants, notwithstanding their frequent mutinies and rebellions : their military duties have been now discontinued, but ample employment is found in the cultivation of their tiny Inams, and in a portion of the adjacent Government land.

The predatory classes, consisting of Mangs, Mahars, Ramoosces, Beruds, and Kuminees, and amounting to 7,902 families, were formerly notorious for lawless and very atrocious acts, not only in their ordinary vocation of robbery, but also by becoming the hired instruments of private malice. Their success in robbery is to be attributed to their cautious cunning in previous arrangement, as well as their cruelty during the excursion. They have, however, been now reduced to a state of comparative order : some have been employed as Rukwuldars and guides, others settled in an experimental farm, and the remainder find an honest livelihood in a trade in hides and horns, and in the manufacture of mats, baskets, and ropes.

The cultivators may be divided into three classes—the Mahomedan ; the Koonbee ; and the Jain. The Jain differs in many points of religion from the Koonbee, worshipping Shiva under the form of a naked image, and avoiding animal food and intoxicating liquor. The Jains burn their dead, and rather despise their Hindoo brethren, with whom they will neither eat nor intermarry.

The Mahomedans are descendants from the Mogul hordes which swept the Deccan at intervals, or of the foreign mercenaries of the Kolhapoor princes, who received in the days of anarchy grants of land for military service, and have since settled down to the plough. They evince great deference to the prejudices of their Hindoo neighbours, and many are accused of strong predilection to much of their ceremony and idolatry.

The cultivators throughout are peaceable and industrious, stout, and well versed in their own theory of cultivation, and in ingenuity and skill : considering the circumstances under which they are placed, they will bear comparison with those of any part of the world.

The females of all the lower classes engage in all the labours of agriculture equally with the men. The picking and cleaning of cotton is performed by them by the common Kunna, and the preparation of the cotton thread with a miserable wheel turned by the hand occupies their leisure hours. Household avocations are further exacted, and the women are frequently employed in conveying loads, and in attending the weekly bazars with any little articles which may be in excess for disposal.

DYERS AND DYES.—The following are the usual colours used in dyeing by the Kolhapoor dyers :—

- Koosumba (or red).
- Goolabee (or rose-coloured).
- Piajee (or onion-coloured, light pink).

Yellow.

Orange.

Green.

Abashae (purple).

Woodee (or reddish black.)

Red.—The following materials are required for the preparation of this dye:—

Dried safflowers.

Limes or common citrons.

Carbonate of soda.

Turmeric.

A piece of white cloth, about four feet square, is fastened to the corners of a small square wooden frame, fixed on four legs, the cloth forming a bag in the centre. Three pukka seers* of dried flowers are put into the bag, and water is gently poured over them. The flowers are pressed with the hand, and the water oozes through the bag, tinged in the first instance with red, and then with yellow, and at last a flow of colourless liquid indicates that the flowers have attained the requisite degree of purity.

Twenty pots, each containing about 13 pukka seers of water, are generally required for this purpose, and the red coloured water which is in the first instance obtained affords a pink colour for dye.

Carbonate of soda† weighing 8 oz. is now mixed with the purified flowers, and the mixture is pressed with the hands or feet till the carbonate of soda has thoroughly pervaded the Koosumba.

A fresh piece of cloth is now fastened to the corners of the frame as before, and the flowers are again placed in the bag. Water is slowly poured over them, and in about twelve minutes a red dye begins to ooze through the cloth. This dye, which is called Jetha, is of a very superior quality, and is kept in a separate vessel. Water is continued to be poured in until both the cloth and the flowers lose their red appearance, but the dye which is latterly obtained is considered to be of an inferior quality to the Jetha.

The juice of 100 limes or 24 citrons, weighing about 2½ pukka seers, is then poured in equal portions into the two kinds of dye, and the mixtures are kept in this state for twenty-four hours. On the next day, the thin coloured water on the surface of the dye of the superior quality is poured off into another pot, and a thick red dye in a liquid state, weighing about three fourths of a pukka seer, is left behind. No sedimental change takes place in the inferior kind of dye.

The Mode of Dyeing.—The cloth, a turban 90 feet in length, having imbibed a pink tinge from the water first drawn from the Koosumba, is dipped in a mixture composed of the inferior kind of dye (without the lime or citron juice), and a small quantity of the powder of turmeric weighing three pice.

* Each pukka seer weighs 80 rupees.

† The quantity of carbonate of soda used for the purpose depends upon the quality of the dried flowers. If they are of the best quality, the quantity mentioned is made use of.

The cloth is well pressed into the mixture, and kept in it for about twenty-four or forty-eight minutes, after which three-fourths of a seer of lime-juice or other acid is added, and the cloth, after having been pressed, is wrung out and dried.

After this, the cloth is dipped in the superior kind of thick dye, and afterwards squeezed and dried, and the process is repeated until the cloth has imbibed the entire colour.

Charges.—About Rs. 2 are charged for this dye. The actual costs are as follow :—

| | | | | | | | | |
|--------------------------------------------------|----|----|----|----|-----|---|---|---|
| Dried safflowers, $\frac{1}{2}$ maund.. | .. | .. | .. | .. | Rs. | 1 | 0 | 0 |
| Citrons or limes .. | .. | .. | .. | .. | .. | 0 | 2 | 0 |
| Carbonate of soda and turmeric .. | .. | .. | .. | .. | .. | 0 | 0 | 3 |
| Wages of 2 men employed for 2 days at 1 anna and | | | | | | | | |
| 6 pies each per diem .. | .. | .. | .. | .. | .. | 0 | 6 | 0 |
| Total.. | .. | .. | .. | .. | Rs. | 1 | 8 | 3 |

Leaving 8 annas as profit to the dyer.

Goolabee or Rose-coloured Dye.—Two sorts of red dye are prepared in the manner already described. In the dye of the second or inferior kind, the turmeric powder or lime-juice is omitted. The cloth is dipped in it, and squeezed, and then saturated with one quarter of a pukka seer of the superior dye : 8 annas are charged for the dying of a turban 90 feet in length of the goolabee or rose colour.

Piajee, or Onion-coloured Dye.—The Piajee requires only half the quantity of the superior red dye used for the Goolabee. The same process is undergone, and 4 annas are charged for dying a cloth of similar size.

Yellow Dye.—The materials required for the dye are Hullud or turmeric, and carbonate of soda.

Half a seer of turmeric is beaten to pieces, moistened, and reduced to paste, and the carbonate of soda being added, the mixture is pounded on a stone.

The cloth is first dipped in a solution made with water, and the turmeric paste, and then wrung out. A further quantity of the turmeric is put into the solution, and this process is continued till the cloth has become thoroughly saturated, and at this stage the cloth has become Bhugway, or brownish, the colour of the clothes worn by certain Gosavees and wandering quacks.

The cloth is then dipped in a mixture consisting of $1\frac{1}{2}$ seer of water, and the juice of three citrons, when it assumes the colour of the rind of a lime : 3 annas are charged for the dye. The actual cost is as follows :—

| | | | | | | | | | |
|-----------------------------------|----|----|----|----|----|-----|---|---|---|
| Citrons .. | .. | .. | .. | .. | .. | Rs. | 0 | 0 | 6 |
| Turmeric and carbonate of soda .. | .. | .. | .. | .. | .. | .. | 0 | 0 | 6 |
| The wages of a man .. | .. | .. | .. | .. | .. | .. | 0 | 1 | 0 |
| Total.. | .. | .. | .. | .. | .. | Rs. | 0 | 2 | 0 |

Leaving 1 anna to the dyer, as profit.

Orange-coloured Dye.—Five ounces weight of the red dye of superior quality is poured into a mixture of water and lime-juice prepared for the yellow dye, and the cloth dipped in this, and dried, becomes of an orange colour: 6 annas are charged for this dye.

Adding 2 annas on account of the red dye to the actual charge incurred for the yellow dye, 2 annas are left as profit to the dyer, as profit.

Green Dye.—The cloth is dyed blue by means of indigo; it is then subjected to the same process by which the yellow colour is produced, and becomes green: 4 annas are charged. The actual expenses are as follows:—

| | | | | |
|--------------------------|-----|---|---|---|
| For indigo | Rs. | 0 | 1 | 0 |
| For dying yellow | | 0 | 2 | 0 |
| Total.. .. . | Rs. | 0 | 3 | 0 |

Leaving 1 anna for the dyer, as profit.

Abashace or Purple-coloured Dye.—After the cloth has been dyed of a rose colour, it is, while wet, dipped in a solution of water and indigo, and then wrung out and dried; afterwards it is dipped in a mixture of water, and superior red dye, and when thoroughly saturated, it is squeezed and dried: 12 annas or 1 rupee are charged.

Oodee, or Reddish Black Dye.—The cloth is first coloured blue by means of indigo. It then undergoes the process used in dying the Goolabee, but a greater portion of the superior red dye is made use of. The cloth then exhibits what is called good Oodee colour, and 1 rupee is charged for the dye.

LANGUAGE.—Murathee and Canarese are the languages chiefly spoken throughout the principality; the former in the northern and central districts, and the latter in those to the southward, adjoining the Collectorate of Belgaum.

Gujrathee and Marwaree are used among the Bunias and merchants, and a knowledge of Sanscrit and Persian is retained among a few of the learned Pundits and Moulvees.

The predatory classes have a peculiar language of their own, a vocabulary of which is given in the following pages.

The Beldars also possess a language of their own; and some other of the traders possess a peculiar jargon only understood by the craft, called Nand Bhasha.

Specimen of the Language used by the Mangs and Ramoosees, when they wish to communicate secretly in the presence of other persons.

CONDITION.—*Sirdars*.—There are many chiefs of old family and extensive estate, but no one now lives in accordance with his rent-roll. During the old, infirm Government, the number of their retainers secured for them a share of power and respectability, but under the resistless power of the paramount authority, the gathering has greatly disappeared, a natural repugnance is evinced to any very extended intercourse with the officers of the new Government, and a great portion of the time which was formerly given to attendance at Court is now spent among their families, or in the management of their estates, or very tangled money dealings.

Of the 572 Kollhapoor Sirdars, from the Lord of 100 villages, to the humble Inamdar of only one hamlet, all are in debt, and one-half of the annual revenue is gathered into the coffers of the bankers; but although the large estates, and Jaggers are thus involved, and heavily mortgaged, yet the general condition of the Sirdars is one of sufficient ease and comfort, and their ideas of luxury are happily somewhat primitive. Few, however, are educated, even in the first rudiments of learning; but recent measures have greatly tended towards an appreciation of attainment, and their decisions, generally in matters of criminal and civil judgment, are worthy of being upheld.

At all times their chief pride and expense consisted in the jewels and dresses of their females, in marriage ceremonies, and in a numerous host of ill-appointed retainers, who clustered in crowds around the great man, and who preferred a hard life of idle dependence to the more abundant earnings of honest labour.

A portion of the jewels may be now at the shop of the pawn-broker, and the train somewhat scanty; the monthly household expenses do not exceed Rs. 300 or Rs. 400, but as these matters are prized entirely by comparison, when all are alike reduced, the loss is little felt, and the banker is still willing, on any momentous occasion, to advance money on a further mortgage.

Priests.—The priests enjoy a very comfortable subsistence from their grants of land; and from the voluntary subscriptions of the public they are in the enjoyment of a superfluity of food and clothing, but are extremely

bigoted, uneducated, and ignorant withal, excepting in the matters of their mere ceremonial code.

The highest annual grant enjoyed by any individual amounts to about Rs. 100, but an annual income of Rs. 60 would appear to be the average amount of those who officiate in the temples.

Bramins.—The Bramins, officials of Government, do not receive a similar amount of salary to those of equal grades in the territory of the Honorable Company, but rather in accordance with the lower rates authorised by the former Government of Kolhapoor, and which may be estimated at 60 per cent. of the paid servants of the Company.

Bankers, &c.—Of the bankers, shopkeepers, and manufacturers, there are few possessing any very extensive means or large capital, but all carry on a thriving trade, realizing an annual profit of about 10 per cent. on their employed capital, and all live in very comfortable circumstances.

Artizans.—The demand required by the community has been hitherto greater than could be supplied by the various crafts, and the classes generally being in the enjoyment of sufficient monthly wages, averaging from Rs. 5 to Rs. 10, are provided with an easy maintenance without any great over-exertion of the bodily powers.

Cultivators.—The earnings of the cultivator, varying from Rs. 60 to Rs. 100 per annum, are sufficient for his support; and although the village community is generally indebted to the banker, the individual cultivator seldom works with any view to improving his own circumstances, but merely to paying his tax, subsisting his family as heretofore, and possessing a small store for expenditure at fairs and religious ceremonies; and the total absence of any coercion in the collection of the Government dues would clearly evince that his humble desires are fully attained.

Their principal food is rice with Goor, and this they have in abundance. Their dwellings are comfortable, and their rates of assessment are not exorbitant, as will be seen from the following abstract calculation of the expenses and produce of a beega of the best description, and of a beega of the worst description of Government land :—

Best Beega of Bagaeet or Garden Land.

| | | | | | | | | |
|----------------------------------------------|----|----|----|----|-----|-----|---|---|
| Amount of proceeds | .. | .. | .. | .. | Rs. | 150 | 0 | 0 |
| Deduct amount of Government tax | .. | .. | .. | .. | | 50 | 0 | 0 |
| Total.. | | | | .. | Rs. | 100 | 0 | 0 |
| Expense of ploughing, manuring, weeding, &c. | .. | .. | .. | .. | | 50 | 0 | 0 |
| Net profit.. | | | | .. | Rs. | 50 | 0 | 0 |

Worst Beega of Mal Land.

| | | | | | | | | | |
|----------------------------------------------|----|----|----|--------------|-----|-----|---|---|---|
| Amount of proceeds | .. | .. | .. | .. | Rs. | 6 | 0 | 0 | |
| Deduct amount of Government tax | | | .. | .. | .. | 2 | 0 | 0 | |
| | | | | Total.. | .. | Rs. | 4 | 0 | 0 |
| Expense of ploughing, manuring, weeding, &c. | .. | | | | .. | 2 | 0 | 0 | |
| | | | | Net profit.. | .. | Rs. | 2 | 0 | 0 |

The village system still prevails in its primitive purity, and every hamlet is a miniature commonwealth, each possessing its establishment of officials. The Patel superintends the community, and, although living on terms of apparent equality, preserves his ancient undisputed superiority. The requisite artizans, who are public servants, occupy their hereditary allotments, and the Mahar, the Berud, the guide, and the watchman, are all paid by a separate assignment of land.

Labourers.—A scarcity of labourers prevails throughout the State, and employment is always procurable. The hours of labour, which are from 8 A. M. to 5 P. M., are not overwhelming, and the rate of wages, averaging Rs. 3½ per mensem, is sufficient for support. The daily labourers are a thriving class, possessing good houses, containing several apartments, and preferring their own to the more anxious employment of the cultivator.

The Gurkuree and Putuk sepoys, who to the amount of 6,726 men, formerly enjoyed in land and cash an income averaging a monthly sum of Rs. 4, have been curtailed in their emoluments. A sufficiency of an average annual amount of Rs. 25 has been allowed to all who could prove ancient servitude, and as the performance of military duties is no longer enforced, their leisure time can be profitably employed in the extra cultivation of the adjacent crown lands. Of the 3,538 Gurkures, 2,248, called Itlak, were formerly paid in cash, and the remainder enjoyed small grants of land; and in like manner, of the 3,188 Putuks, 1,030 received cash payments.

The landowners have been allowed to remain in undisturbed possession of their small grants of four and five beegas, whilst the Itlak have been mostly absorbed into the various quotas of Seebundee, required for the duties of the State.

These classes are neither overburdened with work nor wealth, but they enjoy a sufficiency for maintenance on an easy tenure of work, and can increase their means by a little expenditure of labour.

Miners.—In former times, the miners possessed many privileges, and, besides the monopoly for the supply of iron throughout the State, they received rent-free lands from Government, together with an annual allowance of Rs. 1,000 for a supply of cannon balls, and were further entitled to subsistence from the villages adjacent to the scene of their operations.

The increased import of the cheaper and more easily worked material from

England has greatly affected the condition of the Kolhapoor miners, who, however, contrive to eke out a subsistence obtained in mining by following the profession of itinerant blacksmiths.

They, however, appear to be happy and contented, and the monthly wages of Rs. 5 which can be earned, is, according to their ideas of comfort, fully sufficient for their support.

Predatory Tribes.—Oppressed and harassed by the Native Government, the predatory tribes led the life of outlaws, in extreme alternation of plenty and poverty. Their general condition is now easy : none suffer from abject penury, whilst many possess considerable wealth in flocks and herds, and the criminal returns exhibit rare instances of their being now engaged in heinous offences. Measures of amelioration are also in progress to elevate these classes in the scale of society, by a strict surveillance enforced throughout the territory, by rent-free settlements on waste land, and by the education of the rising generation.

Thus, although not abounding in any inordinate wealth, or individually over-swollen fortune, starvation is unknown in Kolhapoor, and all classes, high and low, are amply provided, chiefly, however, from Government grants in Inams, light assessment, and direct payments from the treasury, with wholesome food and clothing, houses suited to the climate, and generally possess what may be considered a sufficiency of means.

Suicide is of very common occurrence among the lower classes, and resorted to to get rid of any bodily pain or mental affliction—a slap in the face, or a hard word, or even the witnessing in others any painful emotion, proving a sufficient inducement to self-destruction.

The art of poisoning is also too well known in its varieties from arsenic to Datura, whilst advantage is taken by the murderer of any epidemic to rid himself of the obnoxious individual.

Slavery.—The slavery at present existing is a mere remnant of the ancient prevailing system, but the slaves may be still divided into the three classes of old : 1st, those who were purchased in foreign countries, and their descendants ; 2nd, those who took the yoke of bondage for simple maintenance ; and 3rd, those who were subjected to it by law for the crime of adultery.

Of the numerous designations applied to this degraded class, the terms Lekowla, Koonbeen, Buteek, and Bansheen, are the most common in Kolhapoor, with the distinguishing termination of the master's family name. The term Bhosley is confined to the slaves of the palace, and Soobédar is added to those who are recognized as royal offspring.

The ordinary duties of the female slaves, who are, moreover, extremely lax in their morals, consist in sweeping and cleaning the house and cooking-pots, and washing the clothes ; the extraordinary duties consist in waiting on the ladies of the Buck, and in taking care of the clothes, jewels, and valuables.

Those slaves who were subjected to bondage for adultery were distributed

for duty at the different granaries and forts, but could be ransomed by a relation on the payment to Government of a Nuzerana.

Whilst employed on all the duties of a menial servant, their daily allowance consisted of a measure of one seer of grain, and an annual gift of clothes, worth about Rs. 3 ; but the Government were bound to provide for the marriage expenses of their children.

About 600 slaves still remain in the palace, and the houses of the Sirdars and gentlemen in the city, and about 500 in the houses of the respectable Patels and Bramins in the districts. The fear of desertion and complaint to the authorities at the present period preclude any chance of ill-treatment.

Food.—The food used by the lower classes of people, *i. e.* Koonbees, Mahars, &c. in the Kolhapoor districts of the Konkun Ghaut Matlia consists of Nachnee or Naglee (*Cynosurus corocanus*), Wuria (the grain of a particular kind of grass), Oorid (*Phaseolus radiatus*), Koodroo or Hurik (*Paspalum frumentaceum*), Burug, (millet seed, *Panicum miliaceum*), Bhat (rice), but used very sparingly.

The monthly expense of a cultivator and his family, consisting of himself, his wife, and two children, will be as follows:—

| | | | | | | | | |
|-----------------------------------------------------------------------|----|----|----|-----|----|----|---|-----------|
| 15 pylees of Nachnee for two persons, at 1 seer to each | | | | | | | | |
| per day, at 13 pylees per rupee | .. | .. | .. | Rs. | 1 | 4 | 0 | |
| 7 pylees and 2 seers of ditto for two children, at $\frac{1}{2}$ seer | | | | | | | | |
| per day.. | .. | .. | .. | .. | .. | .. | 0 | 7 0 |
| Salt, chillies, &c. | .. | .. | .. | .. | .. | .. | 0 | 3 0 |
| Extra for one festival day in the month | .. | .. | .. | .. | .. | .. | 0 | 3 0 |
| | | | | | | | | <hr/> |
| Total expense for 1 month.. | | | | | | | | Rs. 2 1 0 |

Vegetables and fuel are obtained from the hill-side, but to eke out a subsistence, the people use the following wild roots and fruits occasionally for at least three or four months during the year:—

The roots of the Shaid Vail.

The beans and roots of the Poorsee.

The roots of the Haloora.

The roots of the Burmolee.

The fruits of the Kagul Koosree.

The fruits of the Rath-ambea (*Garcinia gambogia*.)

The fruits of the New.

The fruits of the Kurunda.

The fruits of the Oombur (*Ficus glomerata*).

The fruits of the Torna (*Ziziphus albeus*).

The heart or tender core of the Chowanee (wild plantain).

The Cudoo Curunda.

The Soorun (*Dioscorea*).

The heart of the Dinda.

The sprouts of the Ran Chowa.

The heart of the Bhairda or Soormad (wild palm) is also dried and ground into flour, and mixed with Nachnee to make bread, and a single tree will often yield about two maunds of this flour.

The food used in the Desh by the lower class of people consists of —

Bhat (rice).
 Nachnee (*Cynosurus corocanus*).
 Sawa (*Panicum frumentaceum*).
 Sujgoora or Bajree (*Holcus spicatus*).
 Rala (panic seed).
 Guhoo (wheat).
 Kooltee (*Glycina tomentosa*).
 Tooree (*Luffa acutangula*).
 Vatana (*Pisum sativum*).
 Mussoor (*Cicer*).
 Moog (*Phascolus mungo*).
 Oorid (*Phaseolus radiatus*).
 Sattho (*Hordeum hexastichon*).
 Wurna (*Phaseolus radiatus*).
 Mukka (Indian corn).

Of these used for daily consumption are—

Nachnee, made into bread, and Ambeel, a sort of flummery, being a diluted preparation of Nachnee flour and butter-milk.

Jondhla, made into bread.

Sawa, cooked as rice.

Sujgoora or Bajree, made into bread.

Rala, cooked as rice.

Vatana and Tooree, cooked into Zunka, a kind of paste, and eaten with bread.

Mukka, made into bread (mostly used in the Sherole and Alte districts).

It is also, when tender, roasted, and eaten without being ground into flour.

Wheat, rice, gram, &c. being expensive food, are only used on festival days.

The cost of food to a cultivator and his family, consisting of himself, his wife, and two children, in the Desh, may be taken at—

16 pylees of Jondhla to man and wife for one month, at 2 seers

| | | | | | | | | |
|-------------------------------------------------|----|----|----|----|-----|---|---|---|
| per day, at 8 pylees per rupee | .. | .. | .. | .. | Rs. | 2 | 0 | 0 |

| 1 maund of Bhat for two children | .. | .. | .. | .. | | 1 | 0 | 0 |
| Extra expense for festival days, one in a month | .. | .. | .. | .. | | 0 | 4 | 0 |

Total expense per month.. .. Rs. 4 1 0

Fuel is procured from the fields, and cow-dung cakes are made on the premises.

GENERAL CONDITION.—Houses.—The dwellings throughout the State are well adapted for the climate. The houses of the gentry are substantial erections of stone and lime, frequently ornamented outside with carved wooden work, and many afford accommodation for 50 or 80 retainers in a series of quadrangles, round which the buildings are constructed of two or more stories. The houses of the middle classes are of a similar description, though smaller in dimensions, and those of the artisans and shopkeepers generally contain many rooms, the veranda next the road forming the shop; and all have strong wooden doors. In the absence of windows, the interiors are dark, and the prejudice regarding the sanctity of the cow induces the reception of the holy animal under the cover of the roof, and, according to European ideas, the vestibules are anything but clean. Gods, heroes, and wild beasts are often painted in gaudy colours on the outside walls, which also bear alternate streaks of white and red, to avert the approach of cholera.

The houses of the cultivators are composed of sun-dried brick or wattle, and tiled or thatched, according to their location in the east or western districts. They are, however, all comfortable and commodious, generally containing two rooms; and the floor, being somewhat raised from the level of the ground, is kept very clean. The cattle-shed is under a separate roof, although the stores of grain are preserved in large baskets within the dwelling-house.

The members of the lowest castes, and the Natives of the districts in the vicinity of the Ghauts, inhabit huts composed of wattle and mud, partitioned with mats into different rooms: they are often thatched with the dried sugar-cane, or with coarse reeds, and a profusion of creepers is encouraged to form a further protection from the weather. The custom, however, induced by a fear of fire, of removing the thatch during the hot season, is apt to engender sickness, from the vicissitudes to which the inmates are necessarily exposed.

Furniture.—A taste for European furniture is fast progressing in the State, and there are few houses of the upper classes where chairs and couches have not within the last five years been added to the Charpai, the swinging bed, and the Native cushion on the carpet. Hanging lamps and China paintings are highly prized, and small chandeliers with glass drops are to be found, only, however, in the houses of the richest individuals. Among the middle and lower classes, a few copper and earthen vessels and a spinning-wheel compose the inventory, whilst a rough bedstead or a few quilts and cumbles on the floor form the only requisites for the night rest.

Food.—The common fare is boiled rice and other grains seasoned with herbs, salt, and chillies, or farinaceous cakes with Gool or garlic as a relish; and in addition to the above, it is estimated that with the exception of the Bramins and Jains, the remaining inhabitants eat animal food, fish, or poultry, once, at least, during the week. Milk is much used, though never fresh from

the cow, and ghee among the rich, and oil among the poor, form a daily source of expenditure.

Smoking and chewing tobacco is prevalent, only, however, among the men and very abandoned females, but betel is a luxury only enjoyed by the rich.

A large portion of ardent spirits and noxious drugs is consumed annually, chiefly by the lower classes of the Hindoos and Mahomedans : intoxication is not considered disgraceful by them.

Ornaments.—Few of the common females are to be seen without ornament on nose, fingers, or ankles : the higher and middle classes wear their ornaments made of glass and the precious metals, and the lower classes content themselves with the inferior description made of lac.

AVERAGE COST OF MARRIAGES AMONGST THE SIRDARS, SHROFFS, ARTIZANS, KARKOONS, AND RYOTS.—The marriage rites are considered of the highest importance among all Hindoos, and are usually performed with comparatively unbounded extravagance.

The cost, however, incurred by the different classes, varies greatly, according to the religion and custom, and the following table shows the average minimum ever expended on the ceremony in Kolhapoor :—

| Class. | Names. | Amount varying | |
|--------|---------------------------------------|----------------|--------------------------------------------------------------------------------|
| | | From Rupees | To |
| 1st | Sirdars | 1,000 | As many rupees as they can beg or borrow, according to their respective means. |
| 2nd | Bramins | 200 | |
| 3rd | Inferior classes of population | 30 | |

The very heavy expenditure to which the wealthier classes are subjected on the occasion of weddings, consists, independently of the expenses of religious ceremonies, donations, and feasts to Bramins, in giving entertainments to their friends, presents of clothes to their subordinates, and in providing *ad libitum* a large amount of jewellery.

The items of expenditure, which consist in the distribution of Dukshuna, and giving feasts to Bramins, almost entirely absorb the moderate sum of Rs. 200 allowed to the 2nd class, who can scarcely provide in sufficiency the remaining requisites of jewellery and clothes.

The lower orders, composing the 3rd class, are not held to be particularly responsible in the due observance of religious ceremonies, and enjoy exemption from the imposition of distributing Dukshuna, and giving feasts to Bramins. They are, however, obliged to invite their own caste people, and give a general entertainment, which consists of sheep and spirituous liquors, both of which can be obtained in Kolhapoor at a moderate cost.

The items of marriage expense for both the contracting parties may be detailed as follows :—

Bridegroom.

1. Payment of a certain amount to the parents of the bride.
2. Expenses of religious ceremonies.
3. Dukshuna to Bramins.
4. Feasts to ditto.
5. Clothes for the bride and her parents.
6. Jewellery for the bride.

Bride.

1. Dowry to the bridegroom.
2. Dress, &c. for ditto.
3. Expenses of religious ceremonies.
4. Dukshuna to Bramins.
5. Feasts to ditto.

Celebration of Marriage.—On the conclusion of the Dewuk or Poonia Wuchun, the ceremony which is celebrated with great rejoicing as being the foundation and commencement of the marriage, and is attended with performances on loud musical instruments, and the distribution of sugar, betelnut, Dukshuna, and cocoanuts, the bridegroom enters the village. The religious rite called Shreemunt Poojun is then celebrated with equal rejoicing, and is succeeded by that of the Wagh Nischoy, and several others, which are considered indispensable for the prosperity of the marriage.

An auspicious day is then selected, and about two hours previous to the happy time appointed, the bridegroom is carried to the house of the bride, richly dressed and ornamented, attended by relations and musicians, and is duly seated on the raised earthen platform, called Bowhula, which is white-washed for the occasion, and encircled with earthen pots of an oblique form. A cloth called Anterpat is then held between the bridegroom and bride, who stand, the former with a cocoanut in his hands, and the latter with a garland of flowers, and both in meditation on the names of their respective family deities. The Bramins and relations, who attend in great crowds, surround the parties, and as the priests chant the harmonious song called Mungulashtuk, throw coloured rice in small quantities on the foreheads of the bridegroom and the bride. As soon as the song is finished, the bride places the garland on the neck of the bridegroom, and the action is followed by a loud burst from all the musical instruments, and general acclamations of joy from the crowd.

Other ceremonies are now performed by the parents of the bride, and betelnut is distributed to the guests. Bags of copper coin are afterwards placed in the square, and the business of distributing Dukshana, which generally varies from half an anna to a rupee to each individual, is performed outside the premises by able-bodied servitors.

The last ceremony of Wurath is performed with considerable pomp, as terminating the wedding. The bridegroom and bride, mounted on the same horse, are taken in procession to a pagoda; fireworks are displayed in sufficient abundance, and, on this day, the bride is carried to the house of the bridegroom, when feasts given to the Bramins and relations by the parents of the bridegroom and bride conclude the expensive ceremonies.

PREVALENCE OF ADULTERY AND CONCUBINAGE.—In former days, under the Native dynasty, the crime of adultery was considered to be very abominable, and was visited with the severe displeasure of Government, attended in many instances with personal punishment, solitary confinement, and subjection to

This crime appears particularly dominant among the highest class of Hindoos, the Bramins, and arises chiefly from the following grounds:—Early marriages; the disproportionate ages of the bridegroom and bride; the non-consultation of the wishes of the parties previous to the matrimonial contract, and the prohibition of re-marriages by virgin widows.

When a girl attains the age of eight years, her parents depute either a priest, or some relation, to look out for a bridegroom. The envoy accordingly proceeds from one village to another, and after finding out a suitable family, effects the necessary settlement. He then returns to his employer. Letters streaked with red and yellow, called Koonkotrees, are mutually exchanged, and when an auspicious day is agreed upon, the boy is taken to the village where the bride resides, attended by his parents, relations, and friends, and the ceremony is performed. Under this system, reciprocal affection would be a plant very hard to foster, or bring to maturity.

The prohibition of re-marriage also produces very baneful effects. The widows, more especially of the richer classes, are blessed with plenty, and being fat and lusty, are easily tempted, especially if their influence be at all important in the house. Physicians are at hand, and in constant employ, who, on the slightest symptom of pregnancy, administer medicine, and the lady feigns sickness, and remains confined for a few weeks, when the commission of the crime is easily and successfully concealed.

Adultery among the inferior classes is comparatively limited, as they are exempted by their religion from any restriction on re-marriage, but the Bramins and Kshetrees, together with a few other castes, are under strict injunctions on this point, and although the custom was at one time allowed, the present system was introduced by the famous Shunkuracharya, who flourished during the fourth century B. C.

Shunkuracharya is considered to have been an incarnation of the Hindoo god Shiva, and is recorded in the Poorans as having destroyed the Jain faith, which once prevailed to a great extent throughout this part of India, as well as to have been in enmity with Suruswutee (the goddess of science), who was favourable to the Jain cause.

During the former independent Native Government, the husband possessed

authority to inflict punishment on both his wife and her paramour, and in many instances to the extent of death, without notice being taken by the Government; and till very lately, in Sawunt Waree, a brother was not at liberty to speak to his sister in private, and the circumstance might be viewed in the light of crime, and punished accordingly.

In consequence of the present flagrant system of marriages, concubinage prevails to a great extent, and has been generally adopted by both the rich, and poorer classes.

This species of handfasting is not considered very disreputable, and although frequently resulting in ruinous debt, and bitter quarrel and feud, the natural desire of forming an attachment, instead of having one forcibly assigned, induce many to prefer the system, even under the chances of a little disgrace, and expulsion from more respectable society.

FUNERALS AND SHRADH CEREMONIES.—Funerals are of three descriptions—burning, burying, and immersing.

The first chiefly prevails among the Bramins, and other subordinate castes, who profess Braminism, and the ceremonies among these classes do not materially differ, although the expenses vary according to the respective means of the parties, and may be detailed in the following items:—

Fuel and dry dung cakes.

New cloth for covering the corpse.

Sundry articles, such as turmeric, sesamun, twine, &c.

Dukshuna, required to be paid to the priest who attends the funeral procession, for the performance of the requisite rites.

Donation to Bramins.

Feasts to ditto.

With the exception of the last three items, the average cost of the funeral hardly exceeds Rs. 5; the remaining items, however, are considered indispensable to all who can in any way afford the disbursement, which must vary according to the means.

The donation to Bramins particularly is exceedingly costly, and generally consists in the grant of horses, cows, cots, beds, provisions, and such other valuables as were the greatest favourites with the deceased, or of their value in money.

Burying the bodies is practised especially among the poorer Koonbees, Mahomedans, and the inferior classes, whose tenets admit of a certain latitude in the disposal of their dead.

The graves are generally excavated by Mahars, who receive a remuneration for their trouble, and with all economy the cost of burial amounts to not less than Rs. 3. The other expenses incidental on the performance of religious rites are greatly left to the option of the people themselves, who pay little respect to ancestral or superstitious customs.

The cost of Rs. 3 in burying is slightly exceeded by the Mahomedans,

Mahars, and Mangs, who erect mausoleums or tombs over the places where the dead are deposited.

The last description of funeral, by immersing, is very uncommon, and considered to be highly sacred, the parties entitled to it being Sunyasees, and individuals who have declared themselves to be saints. These classes also have recourse to burial in salt. Under the Native Government the custom prevailed throughout this part of India of drowning, or burying Sunyasees alive, sometimes with, and sometimes without their consent.

When reduced to imbecility from sickness, or old age, the Sunyasee was seated in a sort of car called Mukhur, and carried to the river, bearing on his neck garlands of flowers. He was then placed on the banks, and after the conclusion of various ceremonies, a large stone was fastened to his loins, and a conch shell struck on his forehead by one of his principal disciples, followed by a loud burst from all the attending musical instruments. He was then floated down the river by four men, and drowned, to the great delight of the spectators. The barbarous rite has been discontinued, and succeeded by that of immersion or burying the dead bodies in salt, with all the ceremonies formerly used in drowning.

The Hindoos mourn for their dead, and the duration of the days of mourning varies according to the following table :—

| Names. | Bramins and other Subor- dinate Castes. | Murathas, Koonbees, &c. | Mahars, Mangs, Chambars, &c. |
|----------------------|-----------------------------------------------------|-------------------------------|---------------------------------------|
| | Days. | Days. | Days. |
| Parents | 10 | As Bramins. | As Bramins. |
| Brothers | 10 | | |
| Sisters | 3 | | |
| Paternal uncle .. | 10 | | |
| Ditto cousin .. | 10 | | |
| Maternal uncle .. | 3 | | |
| Ditto cousin .. | 3 | | |
| Fathers-in-law .. | 3 | | |
| Mothers-in-law .. | 3 | | |
| Husbands | 10 | | |
| Wives | 10 | | |
| Sons | 10 | | |
| Daughters | 3 | | |
| Distant relations .. | Ablution. | | |

The relations of the deceased accompany his funeral procession, and after the disposal of the corpse, bathe in cold water, and return home mourning. On the expiration of the prescribed period, they again bathe in either cold or hot water, and the priest who attends the ceremony repeats the usual chants, and

administers a small quantity of a mixture called *Punch-guvya** to the mourners to drink. Sacred threads, usually worn by the superior classes, are exchanged for new ones, and whilst feasts are given to Bramins in honour of the deceased, the mourners are conveyed in procession to a pagoda, and after paying a visit to the idol, they are brought back to their houses. Betelnut is afterwards distributed to the parties who formed the procession, and the assemblage is dispersed.

SHRADH RITES.—The Shradh rite, or celebration of the anniversary of the death, is distinguished by two different names, *Puksh* or *Mahalaya*, and *Shradh*, both of which are performed annually, the former in the second fortnight of the month of *Bhadrapud*, and the latter on the date on which the party died.

On the day previous to the anniversary the family priest pays his visit to the master of the house, and reminds him of the ceremony. The following day he again attends at the usual hour of 12 A. M., and dictates the performance of the requisite religious rites.

On the conclusion of the ceremonies, which last about two hours, wooden seats, with served dishes, are arranged for the guests who have been invited to dinner, and as the guests take their seats, verses are repeated by the priest, the guests are worshipped, and requested in another distich to eat their fill. Betelnut, and *Dukshuna* varying from one anna to a rupee, are afterwards distributed to the guests, who retire to their homes.

Anniversary rites are held by widows, but the rites on account of females who die during the life-time of their husbands are of a different character, and are invariably performed on the 9th of *Bhadrapud Vudiya*, commonly called *Ayo Nowmee*.

SUPERSTITIONS REGARDING EVIL SPIRITS.—According to popular belief, a race of evil spirits, called *Pishach*, exists amongst the varied productions with which nature has provided the earth. India generally, and *Kolhapoor* particularly, is infested by various species of this demon race, whose attacks are generally attended with fatal consequences, unless proper measures are speedily adopted for their expulsion.

These evil spirits are believed to live on air, to dwell especially on trees, near tanks, wells, or the junctions of rivers and roads, and are greatly addicted to wandering during the night; but they are not in any way scared by the light of day, and when a traveller passes within their reach, the mortal form, which has been assumed in the first instance, is exchanged for the shape of some ferocious animal, and the victim is terrified into a state of helpless imbecility, and subjected to the effect of their dreaded influence.

The race generally is described to be without any distinctive form, but possess supernatural powers, by which they are at pleasure enabled to take any

* *Punch* means five; *Guvya*, products of the cow. These ingredients are milk, curd, clarified butter, urine, and dung.

shape they choose, and the names of a few of the principal tormentors are as follows :—

- | | |
|------------------------|----------------------|
| 1. The Summundh. | 7. The Brumha Geera. |
| 2. The Jhoting. | 8. The Bhoot. |
| 3. The Khuvees. | 9. The Jakheen. |
| 4. The Geera. | 10. The Lowsut. |
| 5. The Brumha Rakshes. | 11. The Challa. |
| 6. Ditto Summundh.. | 12. The Moonja. |

Together with many others of an inferior description.

The Summundh derives his origin from a learned Bramin, whose hopes remain unfulfilled in consequence of an untimely death; and although considered a devil, he is not so apt to disturb people as the other inferior evil spirits, but his powers of mischief, though seldom used, and only on some great injury being received from an individual member of a family, are always uncontrollable by magicians, and generally end in the gradual destruction of the entire race.

Next to the Summundh in importance, are the Jhoting and Khuvees, who derive their existence from the Muratha and Mahomedan. The attacks of these evil spirits, like those of the Summundh, are unfrequent, and comparatively unmanageable; but from the inferiority of original caste, they are afraid of entering sacred places, or of abusing individuals learned in the Vedas, or strict in their religious performances.

The Geera derives his origin from the Mahar. In common with all the other inferior species of devils, he possesses the ability in an assumed form to deceive wayfarers who may accidentally come across his path. He generally resides in the vicinity of water, in which he drowns his victim. The Geera has particularly chosen the Konkun districts as his place of prank and residence, and may be said to bear some affinity to the European superstitions regarding the Ignis Fatuus, and the Water Kelpie.

Of the remaining seven species, the first three belong to a superior order, and claim an origin from Bramins, being possessed of the same nature and powers as the Summundh; and the Bhoot is the general denomination of all classes of inferior devils, whose attacks, although seldom attended with loss of life, are highly intolerable, from the agonies which they inflict. Nos. 9, 10, and 11 belong to the female sex: of these, the Jakheen, derives her origin from a woman who dies in child-birth. She generally seizes upon young babies, and worries them to death. She also carries off infants from beside their mothers, to return them after a lapse of some days, and altogether she bears a close affinity to the Irish superstition of fairy doings in the nursery.

The Lowsut and Challa derive their origin from women who die before their husbands. Their depredations are generally aimed at the male sex, whom they carry off to their haunts, and after enjoying their company for a season, either kill them, or send them back to their families. Both these species

are stated to reside in water, and afford a slight resemblance to the mermaid, who, with her Indian sisters, uses her supernatural power for the purpose of enticing any handsome young men she may fancy.

The last and most powerful of the species is the Moonja, deriving his origin from a boy of the Bramin caste, who dies previous to the conclusion of his second thread ceremony, called Soad Moonj. He is considered to be most holy, and generally lives on the Pimpul tree, which is held in great veneration by all Hindoos. He washes his body thrice a day, and is a continual visitor to Benares. He never disturbs any one, unless defiled or provoked, is supposed to possess divine powers, and is even sometimes propitiated by worship.

The magician well skilled in the black art is a character highly indispensable in all Native communities, and his audience chamber is crowded by all who are supposed to be attacked by a devil, or to have otherwise fallen sick without any assignable reason. The man of magic sits in great solemnity before his idol, holding a lemon with ashes in his hand, and whilst the circumstances are being explained, he assumes the posture of intense consultation with the superior power. He then delivers the charmed lemon with the ashes to the visitor, and orders him to present on the following morning an account of whatever may have happened during the night.

Having thus made himself entire master of the case, the magician proceeds to the house of his patient with a further supply of charmed lemons and ashes, and assuming a very important air, divides the lemons into small pieces, and scatters them about the house, at the same time applying the ashes to the forehead of the person who may be suffering. The patient ought to be then cured. There is assuredly nothing in the treatment to prevent a restoration to health. Credulity, moreover, possesses a certain influence and effect, and the master of the black art prospers, and fattens on the natural powers of a strong constitution.

On the day of an eclipse, the magicians remain immersed in water, and engaged in repeating all the Muntras which they have acquired. By this act the quality of the charms, which is otherwise thought to wear out, and lose efficacy, receives a great renewal of power and vigour.

PILGRIMAGES AND VOWS.—Pilgrims may be divided into four classes : *1st*, those who have in view the attainment of mercantile profit, or the allowed dole of charity ; *2nd*, those who, in consequence of misfortune and continued suffering, have abandoned all worldly concerns ; *3rd*, those whose object is to gain happiness in a future birth ; and *4th*, those who wish to attain salvation.

The *1st* class of pilgrims are very numerous, and perform pilgrimages with little regard to the shrine or deity visited, and chiefly to accomplish their own worldly wishes and purposes.

The *2nd*, forming, on an average, one-half of the number composing the *1st* class, and including Sunyasees, Gosavees, and Byragees, are distinguished

by their distinctive dress, which is generally dyed with the yellow earth called Hoormooz.

The Sunyasees are chiefly composed of Bramins, and are held to be the most pious of the lot, the word Sunyas being a corruption of Shudneenas, which means the abandonment of the following six passions, viz :—

- | | |
|-----------------------|-----------------------|
| 1. Kam (lust). | 4. Mutchet (envy). |
| 2. Krodh (anger). | 5. Mud (pride). |
| 3. Moho (allurement). | 6. Dumbh (hypocrisy). |

A Sunyasee has never occasion to beg alms as a means of subsistence. On the contrary, invitations are forced on his acceptance, and the meal bestowed is believed to be highly meritorious, and reputed as equivalent to feeding one hundred Bramins.

The Gosavees and Byragees are composed of Bramins and various other castes, who are also held to be pious as the Sunyasees, but from the difference of their respective duties and modes of living, they are seldom regarded with any great degree of veneration ; and supporting themselves on alms and charity, they wander about the country in their visits to all the different sacred places.

The 3rd and 4th classes of pilgrims amount to a very limited number, and the following is a list of the names of a few of the most notorious shrines which are peculiarly the places of their resort :—

- | | |
|---------------------|---------------------|
| 1. Benares. | 10. Joteeba's Hill. |
| 2. Rameshwur. | 11. Tooljapoor. |
| 3. Dwarka. | 12. Rajapoor. |
| 4. Punderpoor. | 13. Nasik. |
| 5. Alundee. | 14. Trimbuk. |
| 6. Kolhapoor. | 15. Muthoor. |
| 7. Budree Kedar. | 16. Bindrawun. |
| 8. Goa. | 17. Jejooree. |
| 9. Nursoba's Wadec. | 18. Yellumma Hill. |

In most instances, pilgrimages are performed in fulfilment of vows, and the Hindoos generally are impressed with an idea, that the offering of a vow to the deities whom they worship is calculated to secure whatever they may desire.

These vows involve either bodily torture, or sacrifice of sheep and fowls, and appear to be more commonly recorded by women, whose particular request is for children.

The most abominable of these self-inflictions is that suffered on the Bugad, swinging suspended by an iron hook passed through the muscles of the back, and next in importance is the vow of offering children to the deities. The children thus offered are generally the first born, including both males and females, who are called Waghias and Moorlees respectively, and are prohibited from marrying. The females, on attaining their maturity, are married to the deity Khundoba, who appears to have a great preference for such vows, and both Waghias and Moorlees maintain themselves by the voluntary donations made

by the pilgrims, or infest the country for the sake of obtaining a maintenance by alms.

The remaining vows consist in measuring the ground with the body, progressing for miles on bended knees.

SCULPTURE, PAINTING, AND MUSIC.

These have been always patronized to a certain extent in Kolhapoor.

SCULPTURE.—The cutting and carving of stone, more especially, has reached a very fair degree of excellence, of which the representation annexed of the palace gateway affords a specimen of chaste and massive workmanship, whilst great skill has been displayed in the interior polish of the basaltic trap, of which material the edifice is composed.

Idols and images* are tolerably moulded and finished, and also vessels used for culinary purposes.

The stone slab is originally quarried by the usual operation of cutting a groove in the rock, and exposing the surface alternately to the action of heat and water.

The value of the finer description of statuary and stone-work depends on the individual talent of the cutter, and the following table shows the expense and profit in quarrying large slabs used for lintels and door-posts in temples and houses, or for extensive embankment facings.

The following is a table of expenses incurred in separating a block 7½ feet long, 4½ feet broad, and 3 feet thick, and cutting into six pieces of the following dimensions—7½ feet long, 1½ foot broad, and 1½ foot thick :—

| | | | |
|-------------------------------------------------------|--------|---|---|
| Wages of 20 men for 8 days, at 8 annas per diem | Rs. 80 | 0 | 0 |
| Steel for instruments | 5 | 0 | 0 |
| | Rs. 85 | 0 | 0 |

The price of each slab at the quarry varies according to the demand, from Rs. 20 to Rs. 50.

PAINTING.—Painting is on the same low footing as in other parts of the country : form and perspective are greatly disregarded, and brilliancy of colour is alone considered to be of any value.

The brightness of hue is obtained by the Cheetaries, by mixing the following materials with gum, or with the yolk of raw eggs :—

Red from Hingool (vermillion), and Shendoor (red lead).

Blue from indigo.

Yellow from yellow orpiment, a substance obtained from the urine of a cow fed on Huldee and Pewree.

* Some of the older sculpture in the temples, and particularly one piece in a Mundup of Ambabae's temple, has been treated with remarkable success. The subject is the seven-headed cobra among a mass of creepers, the foliage of which is very tastefully executed.

Green from Jinglee (verdigris).

White from Khudoo (pipe-clay), and Sufeta (white lead).

There is, however, but a very limited field at present for the display of pictorial art, the embellishment of manuscript works* having been discontinued, and the decoration of houses and temples alone remaining, together with a trifling demand for painted boxes, inkstands, and sticks.

Coloured lacquer invariably forms the ground-work of the painting, and the pigments are necessarily applied thick and powerful, to produce any effect on the glaring lines of the surrounding surface.

The salary of the artists, who are not a numerous class, rarely exceeds the wages of any ordinary artizan.

MUSIC.—Music, as at present existing in India, has received a great portion of the more affected variations from the Mahomedans, under the patronizing influence of the Emperors of Delhi; but the airs are originally Hindoo, and many are simple and melodious.

From early time, the Hindoos have been notorious for their love of music; their philosophers considered the art as the fifth Veda. There are frequent instances of large fortunes having been dissipated in its enjoyment, and at nightfall in every hamlet of Kolhapoor the favourite chaunt, accompanied by the rude Toontoonee, is to be heard rising from the assembled group.

There are many Sanscrit treatises extant on the art, and particularly the Pingul Shastra, which is reckoned the great authority; but so many unnecessary classifications have been introduced, and an absurd attempt made to an embodiment or personification, that the little knowledge formerly possessed on the subject has been successfully enwrapped in mystery, through which, no ordinary talent and perseverance are required to penetrate.

In Kolhapoor the professional singers are divided into two classes, and employed to sing either in the temples before the idols at the time of worship, or at private houses for amusement.

The first class consists indiscriminately of Mahomedans and Hindoos, who sing only Hindustanee and Persian songs; they are gaudily dressed in the Tooman (trowsers) and the coloured muslin Peshwaj, trimmed with gold lace, and generally dance whilst they sing. The cost of this entertainment varies from Rs. 10 to Rs. 25, whilst the singing without the accompaniment (dancing), called Bythuk, is only remunerated with half the above sum.

The second class consists exclusively of Hindoo females, who sing sitting what are usually styled Murathee Lownees, and a set receives from Rs. 5 to Rs. 12 a night.

* In the Kolhapoor Native Library there is a copy of the Bhagwutgeeta, valued at several hundred rupees on account of the illustrations, which are said to have been executed by Kolhapoor artists, and which are very far superior to any of the modern specimens of art now produced.

The accompanying musicians to both classes are generally three men—one who plays the Tubla (a pair of tom-toms,) and two play Sarungees (fiddles).

The Tubla player receives 3 annas, and the Sarungees 2 annas each, of every rupee given for the performance.

In Kolhapoor there are twenty-five professional singers, fifty dancing girls, and twenty-five Lowneewalees.

The following is a selection from the numerous songs of Kolhapoor, which derive their interest from pure local association, but the generality refer to religious themes, and to the battles of the Hindoo deities :—

भोटे कठिण दिवस आले मनुष्य गांजले सारे उद्दिमदाराचे दरोबल राहिले.
जरी धंदा करावा कांहीं आंत सवाई जरी कर्ज काढूं सावकार दिनांत कांहीं.
मनुष्य करतो हेहेई आसून सखाई अन्न वल्ल मिळेना मनुष्यांत जीव नाही.
एक पैशासाठी जीव देई मिळेना पै एक पैशांत चार जिंस पैसाच नाही.
चाल ॥ जसीरे करवीर तसीच मसई कोणीकडे दिसेना सोई बेबरकत अस नाही.
घेणे देणे करतील मूल लबाडी न चाले ॥ १ ॥ ध्रुपद.
मेलो मेलो हातोची हाड पथर थरकाप जाला टबका आला त्याणे कैद भोगावो ठेप. •
चौकडे सातारी माप लुकुम जाचाला शप एकच माप एकच धारण पडली हापाप.
कोणा कोणी बोलूं नये मपचीप जकात केलो माफ गांव मण्यांत सोटे केले येउं नये झोप. चाल ॥
शात तव्या मव्या होरी मेजल्या मेजल्या हिरी मेजल्या सारे रान शिवारे मजून ताच्या घातल्या
घातल्या ताच्या घातल्या.
चे दमले लीडुन जर घरास चोपचा दिव्या आहो दिव्या चोपचा दिव्या.
शिवगणींत शंख फुकले चाक फिरविलें चाक फिरविलें ॥ १ ॥
भल्या भल्याचे झाले फाकांड होतो त्याला दंड इंगजी साचेवो मामुल फीरले घोडे.
गाडी रपया मकुटा प्रचंड नाही वर धंड नेला सराफ सोनार परिक्षेस आचे घोड.
मूल बाळ कुणाची रांड पोटापाई भाडविली पैसा तागडी व्याजवर आंबड. चाल ॥
इंगज बाडादर असा गाजला गाजला असा गाजला चौमुलकीं तंबोर वाजला वाजला तंबोर
वाजला.
ममादेवो शक्ती त्याजला त्याजला शक्ती त्याजला तीन कोने सही केलें राज्य मिळविलें राज्य
मिळविलें ॥ १ ॥
वाणी उदमी जाचले तुंचींत मजुरी करतात मजुरी करतात नाहीं तता राहीली कवणाची
इंगजीत.
कितीएक उपाशीं मरत्यात सुखी नाहींत सुखी नाहींत अन्न अन्न वल्ल पुढें करणखी न्णतील
बघत.
आजपासून सवाशें वर्षांत सात दिवसांत कांहीं होईल तें तें फुडे बमा तुम्ही प्रचीत चाल ॥

चांब्याचे दाम फिरतील फिरतील दाम फिरतील.
अन्नावीणे मनुष्ये मरतील मरतील मनुष्ये मरतील.
सखाराम तेलो बोलो सभेमधीं झुले सभेमधीं झुले सारे उद्दिमदाराचे दरोबल राहिले.
भोट वारेंड दिवस आले मनुष्य गांजले मनुष्य गांजले सारे उद्दिमदाराचे दरोबल राहिले ॥ ४ ॥

Liberal Translation of the foregoing Murathee Song.

In woe I sing that evil times
 Have stooped on Kolhapoor ;
 The days for trick and cheaterie
 Are gone for evermore !

And bankers will not lend their cash
 At simple six per cent. ;
 So how can luckless wights exist
 Who live beyond their rent ?

The pleasures of the trade are gone,
 And people loudly say
 That Kolhapoor will soon become
 As moral as Bombay !

The child can now attend a shop,
 Whilst men of cunning sit
 Bewailing talents unemployed,
 And useless stores of wit !

Hark to the groans from dealer wrung
 In dismal dark despair ;
 A standard measure is enforced,
 And weights must now be fair !

No longer can the wax be used,
 Or stones to weigh the grain ;
 And purchasers must have their worth,
 Or else they sure complain !

The village youth, arrayed with clubs,
 Now meet at evening close,
 And spend the night in watch and ward,
 Instead of sweet repose !

The tanks, and wells, and garden fields,
 Are entered in a book ;
 Accounts are kept of ruined walls,
 Of every jungle nook !

And all lament that joy is flown,
 And money very rare ;
 And whilst the stomach is not full,
 The back is getting bare !

Our Chiefs are smarting under press
 Of penalties and pains,
 For British rule enthalls the land—
 Her flag waves o'er the plains !

Her coin is current in the mart,
 Displaying to the eye
 A human head, without the trunk,
 Cut deeply in the die !

The goldsmith now may leave his craft—
 No touch-stone is required ;
 And skill to test the silver ore
 No longer is desired !

Traders and dealers now must work
 To earn their daily bread,
 And quit the life of luxury
 Which formerly they led !

For having conquered half the world,
 The English now come here,
 And none live happy under them—
 Their rule is one of fear !

And mortals suffer hungry pangs :
 Alas for Kolhapoor !

The days for tricks and trickery
 Are gone for evermore !

But listen to my words inspired :—
 A greater change will come,
 When twelve score years and seven days
 Have come and passed and gone :

The Dorlee will be made of wood,
 And leather pass for gold ;
 For riches will have passed away,
 As the tale of things of old !

For the end of all must come at last,
 And the well at length run dry ;
 And when the money flies away
 All men will starve and die !

Free Translation of the above Murathee Ode, composed by a Muratha.

Who has not heard of Kolhapoor, the city bright and fair,
 And Rajamundul's pleasant fields, producing crops so rare ?
 For Shiva, when he made the gift, proclaimed in thundering tone —
 That twenty-seven potent kings should sit upon the throne !

There long live Baba Saheb Maharaj,
 His brother Cheema too ;
 For princely are their beauteous forms,
 Their hearts are mild and true !

Her battlemented walls enclose the great Bhowanee's shrine,
 And, circling round her massive towers, the sprigs of wealth entwine ;
 For precious as the golden soil of holy Lunka's grove —
 The Goddess Ambabae endowed this city of her love !

Bright as the glorious glowing moon the brother princes stand,
 Like Low and Koosh, these men of war, unrivalled in the land ;
 And as the teeming mine yields forth the costly ore,
 From truthful hearts of honest worth the streams of virtue pour !

Here pleasant groves and mango topes, with foliage dark and deep,
 Woo the faint traveller to enjoy a soft refreshing sleep ;
 The pangs of hunger and of thirst are speedily forgot
 By all who rest amid the shade of this enchanting spot !

Translation of the foregoing Murathee Poem, composed by JOSEF RAO.

O man ! go speedily to that comfort-giving city of Kurweer (Kolhapoor),
 whose glory puts the seven cities (1) and Bhudrika (2) Shram to shame.
 There Jugdumba (3) the fourth principle, which produced the three principles (4), gracefully shines.

To pay obeisance to whom always come believing kings and men.

(1) The seven cities alluded to are Ayodhia (Oude), Muthoora, Maya (Hurdwar), Benares, Kanchee (a city in the Carnatic), Aojain, and Dwarka. These are considered very sacred places amongst the Hindoos.

(2) This is a jungle situated on the Himalaya mountains, called after the trees of Budree (or Jujube tree), abounding there. It is supposed to have been a resort of ancient gods and sages.

(3) The Mother of the Universe, a name of Maha Luxoomee.

(4) The three principles here alluded to are Bramha, Vishnoo, and Shiva, or the creating, preserving, and destroying principles. Bramha, Vishnoo, and Shiva are said to have been produced from Maha Luxoomee.

Whom Vidhi (5), Shumbhoo, Vishnoo, and sages praise, and who gratifies the the desires of all.

Whose hands with Guda (6), Khet (7), Matuling (8), and drinking vessel, are ornamented (9).

Whose very sight destroys the six enemies of her votaries (10).

Whose head with the figures of a Yonee, a Ling (11), and a serpent is adorned.

Opposite to whom sitteth Vighnadhipeetee (12), whom all the poets invoke.

On whose (goddess') north are Munkurnika (13), and gold-complexioned Mahakalee.

On whose south are Suruswutee and Marootee, who in the performance of religious ceremonies is regular.

Around whom are Kashi, Wishweshwur, and other gods : all these should be worshipped.

On the east of this city are Oojwul Amba (14) and Triumboolee.

And the Kotetirth, Gunputeetee, and the pure flowing Juyuntee (15).

On the south exist Gokool (16), Yumoona (17), and Krushnunath (18).

And the river Gomtee and Katyanee, whose miraculous powers grant the requests of those who look up to them with a wishful eye.

On the west is the Runkala Tank, which the Ocean itself cannot match.

*And the Vishaltirth (19), and Sidh Butook, and Shiva, who save mankind.

On the north shines Kedar (20), on the peak of the mountain of jewels.

And at Wudunga resides Mahadeo and Parwutee in their proper persons.

And flows the river Punchgunga, possessed of powers of washing away the sins of mankind.

(5) A name of Bramha.

(6) Mace (weapon).

(7) Shield.

(8) The fruit of *Citrus medica*.

(9) The goddess has four hands, in each of which she hold these things.

(10) The six passions, viz. Kam (lust), Krodh (anger), Lobh (avarice), Moha, (allurement), Mud (pride), and Mutsur (Envy).

(11) Modesty forbids me to translate these words, but as the figures representing them are visible on the head, Sanscrit words mentioned in the poem have been retained.

(12) Vighna (difficulties), Putee (master), remover or master of difficulties. It is a name of Gunputeetee or Gunesh.

(13) The name of the reservoir of water to be found in the temple of Ambabae.

(14) The goddesses commonly called Oojlaee and Temblace.

(15) Commonly called Jeeteecha Odha.

(16) Commonly called Gokul Seergaon.

(17) The name of the brook near Gokul Seergaon.

(18) A name of Krishna.

(19) The Punchgunga at Shignapoor.

(20) Commonly called Joteeba Mahadeo.

Ye mankind wash your persons in the sacred Taruk (21), Surva Muyoor (22), and Agustee Tirthas (23).

O Man ! go speedily to the comfort-giving city of Kurweer (Kolhapoor), whose glory puts the seven cities and Budrikashram to shame.

HEALTH AND DISEASE.

During my residence in this country since the year 1847, I have been particularly struck with the little variety of disease exhibited, as, with the exception of cholera, fever, dysentery, and small-pox, few other forms of disease presented themselves to my notice ; and I may be permitted to suggest the possibility of the correctness of this observation being apparently contradicted by future experience, and that a greater variety of disease will have to be described in succeeding reports ; and this arising, not merely from the changes which are known to take place in the sanatory condition of many localities, when brought under the influence of British rule, but from other causes, which I will enumerate.

In this country of Kolhapoor small-pox and cholera have been hitherto annual and dreaded visitants, and probably swept away in their train the weakly and debilitated, and many who were liable to other diseases, thus thinning out the population, and leaving few but the healthy and robust.

By the measures introduced by the Political Superintendent,—the widened streets, the newly formed drains, the enforced cleanly habits, the improved supply of wholesome water, by the influence of vaccination, as evidenced by the annexed return, and, may I add, by the introduction of the European practice of medicine,—these two terrible diseases no longer devastate the country as in times gone by, and, consequently, the opportunity will be afforded for the display of those other and divers ills to which the human frame is heir, and the attacks of which have hitherto been masked under those of their more formidable rivals.

That this opportunity should be afforded is much to be desired, as with the more varied forms of disease we are fortunately more able to cope with probability of success.

The cantonment at this station has been occupied by troops, both European and Native, of the Madras and Bombay Presidencies.

By the annexed return from 1845 to 1850, a very favourable impression must

(21) These are parts of the Punchgunga river. Taruk means saving from sin, &c. Surva means all—all the sacred waters are comprehended in it.

(22) Mayoor, a name of the son of Shiva. The water of the Punchgunga river is called after Mayoor's name.

(23) Agustee, a sage, who is fabled to have drunk the ocean at one draught.

be produced of the excellence of the climate, and its fitness for Native troops. The years 1845 and 1846 were, it is true, distinguished by a considerable number of deaths, but considering them as periods when cholera was universally fatal, and that the men were harassed by the duties incident upon the war, and also considering the want of accommodation for the troops, the per-centage cannot be looked upon with surprise.

From that time a gradual and satisfactory improvement has taken place, as will be evident from the return; and although regiments have arrived direct from Sind with necessarily debilitated constitutions, the number of deaths has annually decreased.

The same observations will apply to the European troops, among whom the number of treated as respects strength must be considered large, but not unusually so, as compared with other stations.

The very defective accommodation provided for the Europeans in barracks and hospitals at this station contributed in a great degree to the production of disease, and to this cause I attribute the larger amount of sickness which obtained amongst them than with the Native troops; yet still the per-centage of mortality cannot be considered as unusually large in comparison with other stations.

The irregular corps of infantry are quartered at the civil station of Bowra, about two miles from Kolhapoor. By the accompanying return the ratio of mortality will be found exceedingly low, never amounting to one per cent., and in 1850 no death occurred. Looking at the number of treated, this may occasion some surprise, but is to be explained by the circumstance of one-fifth of the admissions being occasioned by guinea-worm, a disagreeable affection, which rarely interferes with life.

The origin of guinea-worm is involved in mystery, and although I have taken some considerable pains in the investigation, I can offer but negative

statements with anything like certainty. From the foregoing return it will at first sight appear that the Muratha suffered more than the Mussulman or high caste Hindoo, but by reference to the column of strength, the contrary will be found to be the case.

The admissions of Murathas will be found to be not more than one-seventh, those of Mussulmans less than one-fifth, whilst those of the Purdésees are more than one-fourth. By careful inquiry I found, also, that the cases were not confined to any particular age, the prime of life seeming to be the most susceptible period, and youth and old age the least.

A remarkable preference, however, seems to be given to the male sex, not one person in a hundred of those attacked being female, although I am not aware that this circumstance has before been noticed by any writer.

It appears certain that the affection spares neither age nor condition, rather preferring men of high caste; and from this we can infer that no peculiarity of diet, or constitution, causes the development of this curious animal in the human frame.

By its being invariably found in the external tissues, we are also certain that it can have no internal origin, or serious constitutional disturbance would be occasioned, and such effects are never seen to accompany guinea-worm.

I am disposed to think, from much observation, and its being found almost entirely upon those parts of the body upon which water drips upon the person when carrying it in vessels from the well, that the germ is at such time deposited, (the water drying by the influence of the sun and the exercise of the person,) and thus finds its way into the pores of the skin.

The difference in the number of males attacked can thus be accounted for. Women almost invariably carry the vessel upon the head, and the drippings are caught in a fillet of cloth placed to protect the head from the pressure, and the additional vessel sometimes also carried by women is borne upon the hip when the legs are protected by the dress usually worn.

The water then rarely falls upon the legs of females in this country, as is the case generally with men, and women almost invariably wash their persons periodically in warm water, which must be considered as protective against the deposit of the germ of the animal.

Another curious fact is also established, viz. that the water-carriers, after any length of service, seem to acquire an immunity from the attacks of this disease.

The best treatment I have found to be a poultice of tar, spread on bread, as an application in the inflamed stage. This remedy seems to possess a remarkable power in diminishing the pain and swelling, and also appears to diminish the period which elapses before the discharge of the worm.

As a means of prevention, I should recommend great attention to cleanliness,

and rubbing the person dry after bathing ; also, for reasons previously described, I believe that if the wearing of some clothing were made imperative upon sepoys, the affection would be in many cases prevented.

The general health of the Kolhapoor Infantry Regiment, as demonstrated in the return, must be considered as remarkably good.

The following return exhibits the state of health of the prisoners in the Kolhapoor Jail since the 3rd June 1848, at which period the building was completed ; but until very lately no distinct hospital accommodation could be afforded, and by the confusion incident upon this want of arrangement many cases doubtless escaped medical notice :—

| | 1848. | 1849. | 1850. |
|----------------------------------------------|--------|--------|--------|
| Total number of prisoners | 597 | 378 | 400 |
| Total number treated | 174 | 173 | 213 |
| Total deaths | 6 | 4 | 5 |
| Ratio per cent. of treated to strength | 29.145 | 45.740 | 53.250 |
| Ratio per cent. of deaths to treated | 3.448 | 2.310 | 1.877 |
| Ratio per cent. of deaths to strength | 1.5 | 1.58 | 1. |

By the return, however, it will be observed that a very small number of prisoners, as compared with the actual number in confinement, came under medical treatment, which speaks well for the healthy state of the Jail. When it is borne in mind that persons of advanced age and debilitated constitution are not unfrequently admitted into the Jail, the per-centage of deaths cannot be regarded as heavy.

It is also worthy of notice, that no fatal cases of cholera have occurred in the Jail, although the city in which it is situated has frequently been visited by the disease, and that scurvy has never yet shown its appearance within its walls.

A liberal supply of excellent water constantly flowing into a tank in the square of the Jail contributes, in my opinion, very materially to the healthy condition of its inmates, and their immunity from surrounding disease.

In addition to these observations on the return of registered sickness, I will offer a few remarks upon some of the more prominent features of disease which have been brought to my notice in the city and districts of Kolhapoor, and will preface them by stating that in my intercourse with the people I have been particularly struck with the unusual degree of ignorance prevailing amongst them with regard to the uses of medicines, many of which are procurable in their bazars, and grown in their country.

In the hands of their Hakeems, simple intermittent fever is frequently attended with fatal results, and they do not even make any attempt to resist an attack of cholera. A person seized is immediately surrounded by his

weeping relatives, the depressing effect of whose loud lamentations contributes to aggravate the disease, and to produce a fatal result.

In the year 1849 the cholera very remarkably confined itself almost entirely to children. The disease not being of a virulent character, the recoveries were numerous. Among the cases few were found above the age of puberty, whilst in 1850, on the contrary, scarcely a young person was attacked, adults only appearing to suffer.

I will merely suggest as a probable theory to account for this circumstance, that in 1849 the contagion of the mild form of the disease was resisted by the adult constitution, although capable of affecting the young and the feeble, and it may be probable that in 1850, the adults only were exposed in their necessary occupations to the causes producing the disease.

Of this we are certain, that in Kolhapoor, cholera is not at the present time so rapid in its action, or so uniformly fatal, as in former years. Whether this arises from an alteration in the type of the disease, or from a more rational system of treatment, is a problem which still remains to be solved.

The treatment adopted here has been to encourage the patient to swallow large draughts of water, which appears to fatigue the stomach, and thus allay the vomiting. Warmth is applied to the whole surface of the body, in a vigorous manner, not suffering the patient to sleep ; and small doses of calomel and opium, and sometimes diffusible stimulants, are given, such as ammonia and camphor. An active aperient is given immediately the vomiting and purging are stopped, continuing the incessant warmth and rubbing, which, if intermitted even for a short time, is liable to be attended with a fatal result. Cholera reminds me frequently of cases of poisoning by opium : excitement by continual friction and cheerful conversation seems to tend materially to a favourable result.

Civilization, we know, exercises an important influence upon the character of many forms of disease, but I am disposed to attribute some portion of the change to the abandonment of the ancient system of giving large quantities of stimulants and narcotics, and to express my belief, that cholera *per se*, has never slain so many victims as the brandy and the opium administered for its relief.

These observations apply necessarily only to treated cases of the disease, as in some parts of the districts this frightful malady upholds its former fatal character, thus strengthening the opinion that the change alluded to is attributable to treatment, and not to alteration of type.

Cholera is supposed by all classes of Natives to depend upon supernatural origin, and, consequently, to be only capable of relief through the same agency. In this belief they very naturally neglect the use of any description of remedy, when death is the unvarying termination of such seizure.

Experience has fortunately proved to us that such mortality is not invariably consequent upon the attacks of this disease, and that even in its most severe form, by judicious treatment, many lives may be preserved.

Further intercourse with Europeans is, however, eradicating the Native traditions on this subject ; and by showing them how care and attention, with the use of medicine, is frequently attended with success, we may hope to induce them to add exertion in the use of alleviating and curative means to the prayers they so uniformly offer up on these occasions.

Several cases of dropsy, occurring in young children, have been brought to my notice, in consequence of the success which attended an operation for tapping, in a child of two years of age.

Further experience is not, however, in favour of pursuing this practice ; and the best and safest plan appears to be to endeavour to produce absorption, which takes place rapidly in a young and growing child. The disease seems to be one of weakness, and a liberal diet effectually contributes towards recovery.

In the year 1848 a typhoid species of scarlet fever prevailed in the districts of Bowra and Vishalgur. The colour of the Native renders the detection of this disease very difficult, and until ulceration of the throat supervened, many unfortunate persons did not even apply for assistance. Some of these cases terminated horribly by suffocation, and in others death was produced by the ulceration extending to the large vessels of the throat, when fatal hæmorrhage ensued.

When medical treatment could be supplied at an early stage, these fearful consequences were in many cases prevented by the use of antimonials and bark.

This peculiar malady (which in its latter stages much resembles a disease sometimes very destructive in this country to cattle) appeared to be confined to the hilly country, where the fall of rain, as previously alluded to, is comparatively severe. I am disposed to attribute its origin to distress, occasioning the people to subsist upon scanty and unwholesome food, at a period of the year when they have to contend with cold and moisture.

This cause of the disease being admitted, the remedial measures will be obvious ; and I will merely add, that when the malady cannot be prevented, quinine is a very useful ally in its treatment.

VACCINATION.—Up to the year 1848 Kolhapoor suffered severely from the ravages of small-pox, natural as well as introduced by inoculation.

A large proportion of maimed and disfigured objects are to be seen in every village throughout the country, and more particularly towards the Ghauts, where the disease appeared to exist in a more virulent form than elsewhere.

After long and persevering efforts, the bulk of the people have been at length persuaded of the milder effects of vaccination, and several of the feudatory chiefs have agreed to support a small establishment for the introduction of the ameliorating system.

The employment under my superintendence of additional Native vaccinators in the districts of Kolhapoor has lately been sanctioned by Government.

This will enable me to receive earlier and more accurate accounts of the outbreak of such diseases as I have just described ; and I confidently anticipate that the supply of medicine and advice which I shall thus be enabled to distribute will not only tend to ameliorate the condition of the people, but dispose them to offer less resistance to the system of vaccination now about to be more extensively introduced into the territory.

The following statement shows the result of the labours of these vaccinators, which are exerted under the immediate superintendence of the Civil Surgeon :—

| Years. | Number of Persons vaccinated. | Remarks. |
|------------|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| In 1847 .. | 205 | Average cost of individual case in England from 1s. to 1s. 8d. Average of individual case in Kolhapoor from $4\frac{1}{2}$ annas ($6\frac{3}{4}d.$) to 5 annas ($7\frac{1}{2}d.$). |
| In 1848 .. | 896 | |
| In 1849 .. | 1,408 | |
| In 1850 .. | 2,680 | |
| In 1851 .. | 2,600 | |
| In 1852 .. | 6,115 | |
| Total . | 13,904 | |

Perhaps the most striking peculiarity observable with reference to the people of this portion of the Southern Muratha Country is their excessive liability to diseases of the skin ; and this tendency is also exhibited among European residents, as depression of the vital energies, whether constitutional or climatic, is frequently accompanied by affections of the epidermis, not usually met with among the same classes in Europe.

These diseases are not frequently severe in character, nor, generally speaking, difficult of removal by ordinary medical treatment, but are liable to such constant return as to lead the unfortunate sufferer to suppose himself labouring under some incurable malady.

The forms most usually seen are those termed vesicular, and classified under the names eczema and scabies, or in familiar language known as “ baker’s itch,” “ grocer’s itch,” &c. ; also a variety so closely resembling the common itch of the north (psora,) that it is often difficult to pronounce, upon a first inspection, as to the true nature of the complaint.

This last named disease differs principally from the European form in its not being easily communicated by contact, but seems to be self-productive, and idiosyncratic to the population.

The Natives attribute the origin of such affections of the skin to their diet, inducing irregularity in the action of the bowels ; and I am disposed to coincide in this opinion, as I am aware that individuals who for any considerable time (even in a European climate) exist upon grain, or any other food containing a scanty supply of nourishment, are prone to affections of a similar nature.

The only remedy likely to benefit the mass of the people will be found in the extension of the means of education, which, by enlarging the mind, will in time induce them to throw off the trammels of caste, and dispose them to partake of that food, which the carnivorous formation of the human teeth so evidently points out as designed for the consumption, and necessary to the well-being of man.

Europeans, also, when suffering from these affections of the skin, and labouring under climatic and other depressing causes, seem to derive more benefit from alteration and improvement in diet and attention to the alimentary system, than by the use of local remedial applications.

In fevers of both remittent and intermittent form, whether of bilious or malarious origin, the Natives of this country pursue but one undeviating mode of treatment; as they labour under the erroneous impression that some evil wind has been the *fons et origo mali*, they invariably commit the victim of fever in a close, and dark room; he is starved for four-and-twenty hours, and aperient medicine is administered.

They are also acquainted with the beneficial action of bitter medicines, such as bark, which, if judiciously employed, exerts so well-known a curative influence in this class of diseases; but they give it so remedially during the accession of fever, without discrimination, or any attempt at examination whether some local affection of the head or other organ would render such medicine hurtful or even dangerous.

As may naturally be supposed, under such treatment many valuable lives are annually sacrificed; local congestions of the brain, liver, or lungs, so frequently accompanying attacks of fever, remain undetected and unrelieved; and the patient, if fortunate enough to survive, frequently retains through life a permanently disordered system.

Those who have had opportunities of watching the action of medicine upon the Natives of India must necessarily become aware that they are equally susceptible of benefit from medical treatment as ourselves, and that light, cleanliness, and pure air are as necessary for their recovery from sickness.

These views, however, are diametrically opposed to the opinions in which this priest-ridden people are educated, and until they become emancipated from this thralldom, a common attack of fever can never be otherwise than a very formidable and dangerous enemy.

EDUCATION.

During the latter troubled state of Kolhapoor society, when the influence of the village system existed in its original purity, when the village dispute was settled *virâ voce* by the Patel and the Punchayet, when a free career was only open in the struggles of war and rapine, and when her isolated situation and constant fighting shut out even the late innovation in foreign parts, the simple knowledge of the father was considered as ample for the child,

education was neither thought of, nor attended to, by the mass of the people, and the few exceptions acquired the rudiments of learning merely to secure a scanty means of maintenance.

On the introduction of British management the grossest ignorance pervaded all classes: few of the Sirdars could sign their names, and many of the Government scribes were unable to compose and indite a common letter.

In the midst, however, of this general ignorance, a few seminaries were preserved among the Bramins, where a glimmering of knowledge was to be obtained, but the exclusive nature of the rendered instruction precluded the possibility of any general ameliorating influence being exercised over the mass, more especially as the higher branches of learning, with the exception of astrology, consisted in an initiation into the system of the Hindoo religion, and instruction in the licentious history of the Hindoo gods.

Throughout the entire principality, containing 446,156 inhabitants, a portion of only 400 was returned as being under tuition. Since the restoration of general tranquillity to the country, the prospects of education have assumed a more favourable aspect: the Government have provided a certain share to the public stock, and numerous private schools have been opened on speculation in all the large towns and villages. Still the elements of knowledge received in these establishments are sought after, rather as being more immediately requisite for the common concerns of life, than as the means of developing the mental powers. The course of instruction consists in a tolerable knowledge of reading and writing Murathee in the Balbodh and Modee characters, and of practical arithmetic, and on the attainment of this modicum of proficiency, the pupil is considered to have finished his education, and to be prepared for the active business of life.

The acquirements of the masters conducting these schools, who, in many instances, have not received a systematic education, are extremely limited, and do not embrace any of the higher branches of science or literature. They are generally Bramins, and their emoluments, which rarely exceed Rs. 4½ per mensem, are dependent on periodical presents of money and grain, and on the monthly fee taken from the boys, which varies from 2 to 8 annas.

With the exception of Bhoodurgur, Bowra, and Vishalgur, adjoining the Ghauts, and containing a wild race, the private schools are equally distributed throughout the country, their aggregate number being 122, and affording instruction to 1,828 scholars, which number would give an average of only 15 boys to each school, and who may be arranged as follows with regard to caste:—

| | | | | | | | |
|----------|----|----|----|----|----|----|-----|
| Bramins | .. | .. | .. | .. | .. | .. | 491 |
| Shenvees | .. | .. | .. | .. | .. | .. | 33 |

| Jingurs | .. | .. | .. | .. | .. | .. | 6 |
| Mahomedans | .. | .. | .. | .. | .. | .. | 88 |

Total.. .. 1,828

Altogether, the education given in the private schools is very meagre, and little calculated to enlarge the mental faculties—indeed, the value of an education is still to be learned; but measures are being gradually introduced to diffuse knowledge over the face of society, and to advance the condition of moral and intellectual happiness.

Besides one English and one Murathee school in the capital, Government institutions have been established at each of the principal towns of the eight districts. They are periodically visited by an inspector, and the surveillance is entrusted to the master of the English school at Kolhapoor. A tuition fee of 1 anna is exacted in these vernacular schools, and in the English seminary the fee varies from 8 annas to 1 rupee, according to the circumstances of the parents and guardians of the pupils.

Out of the 336 boys attending the eight district Government schools, 180 are Bramins, and this condition would evince the backwardness of the other castes to avail themselves of the means of instruction afforded by Braminical teachers, as in the other schools this great difference is not so apparent.

Measures, however, are in progress, to make the educational establishment equally beneficial to the population at large, by the entertainment of popular teachers, the formation of school and local committees, and by granting diplomas of acquirement to entitle the recipient to Government service.

At present the return altogether exhibits an indifferent result in the number of 2,294* boys, which number, though an increase of six-fold during the last eight years, would only form one-nineteenth of the total number of male children in the State.

Kolhapoor in ancient days was held in high repute for the learning of her Pundits, but amidst the desolations occasioned by continued war, the spirit of the times proved unfavourable to the votaries of learning, and whilst in other portions of the country science was lighting up the ancient obscurity, its complete isolation tended to enwrap this little State in comparative darkness.

Eclipses are, however, still calculated, and almanacs are published, and the following list contains the names of 104 original works which have been contributed by the learned men of Kolhapoor:—

List of Works written in Sanscrit and Pracrit.

| Nos. | Names of the Works. | No. of Distichs. | Written A. D. | Explanation. |
|------|---------------------------------------------|------------------|---------------|-----------------------------------------------------------------------------|
| | BY RAOJEE JOSEF RAO. <i>Sanscrit.</i> | | | |
| 1 | Gunesh Stotru .. | 9 | 1817 | A panegyric on the god Gunesh or Gunputee. |
| 2 | Gunputee Ung Stootee. | 12 | 1823 | Ditto on the different members of Gunputee. |
| 3 | Ditto Manus Pooja. | 73 | 1823 | Mental devotion, or abstract contemplation of Gunputee. |
| 4 | Ditto Chando Mala | 42 | 1827 | A poetical work on Gunputee. |
| 5 | Ditto Sejartee .. | 10 | 1828 | A panegyric on Gunputee, to be recited on the occasion of his going to bed. |
| 6 | Ditto Chee Kankud Artee. | 10 | 1828 | Ditto ditto ditto getting up in the morning. |
| 7 | Ditto Ché Upradh Stotru. | 4 | 1828 | Ditto ditto, and a declaration of one's faults. |
| 8 | Ditto Ché Bhujun. | 21 | 1829 | Adoration of Gunputee. |
| 9 | Gunesh Chumppoo .. | 123 | 1820 | A work on Gunputee, partly poetical and partly prosaic. |
| 10 | Ditto Pud | 4 | 1823 | A poetical piece in honour of Gunputee. |

* Namely 1828 in private schools, and 466 in the Government schools.—Vide pages 194, 195, and 196.

| Nos. | Names of the Works. | No. of Distichs. | Written A. D. | Explanation. |
|-----------------|------------------------------------------------|---------------------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11 | Gunesh Sphoot Shloke. | 21 | 1824 | Detached pieces about Gunputee. |
| 12 | Gunputee Chia Artya . | 8 | 1821 | Panegyrics on Gunputee. |
| 13 | Jugdumba Ung Stootee. | 46 | 1823 | Ditto on the different members of the goddess Jugdumba. |
| 14 | Jugdumba Alunkar Mala | 67 | 1841 | A figurative work on Jugdumba or Ambabae of Kolhapoor. |
| 15 | Kurweervureel Shamlabhan. | 3,000 | 1826 | A poetical work on Kurweer (a play). |
| 16 | Chund Sar | 65 | 1818 | The outlines of Sanscrit prosody. |
| 17 | Alunkar Sar | .. | 1818 | Ditto of the figures of speech. |
| 18 | A poetical work on Shivajee the Great. | 3 chapters. | 1843 | |
| 19 | Wurgasheeche Mool Kadhimiache Sadahurn Sootré. | 7 | 1843 | A work on mathematical astronomy. |
| 20 | Koondawureel Grunth. . | .. | .. | Rules for the performance of certain religious rites. |
| 21 | Nurseo Suruswutee Ushtuk. | 8 | 1823 | Poetical pieces on Nursoba's Wadec. |
| 22 | Cheetambur Ushtuk .. | 8 | .. | Ditto on Cheetambur Dixit, a celebrated religious personage, who is said to have flourished at Moorgoor, in the Southern Mahratta Country, about 40 years ago. |
| 23 | Gunga Ushtuk .. | 8 | .. | Ditto on the Ganges. |
| 24 | Maha Maryashtuk .. | 8 | .. | Ditto on the goddess of cholera. |
| 25 | Punchayutun Ushtuk .. | 8 | .. | Ditto on the five deities, Shiva, Vishnoo, the Sun, Gunputee, and Devec. |
| 26 | A poetical piece on Nurseo. | 40 distichs in all. | 1823. | An incarnation of Vishnoo. |
| 27 | Ditto Shiva .. | | | |
| 28 | Ditto Gunga .. | | | The Ganges. |
| 29 | Ditto Ambabae .. | | | |
| 30 | Ditto Suruswutee .. | | | Goddess of arts. |
| 31 | Ditto Bharut .. | | | A great sacred epic poem of the Hindoos. |
| 32 | Ditto Venktesh .. | | | The celebrated Geerce Venkoba, in the Madras Presidency. |
| 33 | Ditto Marootee .. | | | |
| 34 | Ditto Punchayutun. | | | Vide No. 25. |
| 35 | Ditto Shunkuracharya. | | | The original Swamee, said to have flourished 1100 years ago. |
| 36 | Nadee Wulu Yuntru .. | 46 | 1842 | A work on astrology. |
| 37 | Vyshnuwu Ekadushee Neermuga. | 6 | 1844 | Rules for finding the date of the fast Ekadushee, observed by most Hindoos every fortnight. |
| <i>Pracrit.</i> | | | | |
| 38 | A poetical work on Gunputee. | 1,500 | 1828 | In the Arya metre. |
| 39 | Ditto on a Pooranic king named Soodhunwa. | 207 | 1825 | Ditto ditto. |

| Nos. | Names of the Works. | No. of Disticha. | Written A. D. | Explanation. |
|--------------------|-------------------------------------|------------------|---------------|----------------------------------------------------------------------------------------------------------|
| 40 | Seeta Swyunwur Arya, | 9 | 1823 | On the choosing of a husband by Seeta, the wife of Rama. |
| 41 | Duttatruya Junmukal Arya. | 37 | 1831 | Duttatruya was an incarnation of Vishnoo. |
| 42 | Ditto do. Shloke. | 25 | 1847 | In the Shloke metre. |
| 43 | Aryas about Damajee Punt. | 75 | 1841 | A celebrated religious personage ; he flourished about 125 years ago, in the reign of the Emperor Beder. |
| 44 | Ditto Chundrangud, a Pooranic king. | 78 | 1845 | |
| 45 | Ditto King Gopeechund. | 282 | 1827 | |
| BY BABA MAHARAJ. | | | | |
| <i>Sanscrit.</i> | | | | |
| 1 | One thousand names of Rama. | 300 | 1813 | |
| 2 | A work on Prosody .. | 75 | 1825 | |
| 3 | Prateeshakhya Jotsna .. | 500 | 1817 | A commentary on certain rules for the study of the Vedas. |
| 4 | Ashta Khshuree Bueet Pureebhasha. | .. | .. | A glossary on the Vedas. |
| 5 | Koondendoo | .. | 1809 | Rules for the performance of certain religious ceremonies. |
| <i>Pracrit.</i> | | | | |
| 6 | The Geeta in the Abhang metre. | .. | .. | |
| 7 | Ashta Wukru Sumushlokee. | .. | .. | A panegyric on the deity. |
| BY NANA MAHARAJ. | | | | |
| <i>Sanscrit.</i> | | | | |
| 1 | Shrowtanteel Duxeen Dwar Neernuya. | .. | .. | Rules for the performance of certain Vedan ceremonies. |
| BY BAPOO MAHARAJ. | | | | |
| <i>Sanscrit.</i> | | | | |
| 1 | Biography of Seedeshwur Maharaj. | .. | 1828 | The grandfather of Raojee Maharaj, and the Gooroo or spiritual guide of the royal family of Kolhapoor. |
| BY RAOJEE MAHARAJ. | | | | |
| <i>Sanscrit.</i> | | | | |
| 1 | Bhurut Chumpoo Teeka | .. | 1849 | A commentary on the play Bhurut Chumpoo. |

With the exception of the Kurweer Muhatmya, which is ascribed to a writer of the eighteenth century, the extant literature of Kolhapoor is entirely modern, and the authors have sprung into existence only since British influence succeeded in the year 1812 in allaying the fierce feud and turmoil which during the last century had kept the country in a state of utter confusion. The chief portion of these Sanscrit works have been produced within the last thirty years, but chiefly on matters of Hindoo religion, and although a biography has been compiled of one of the great spiritual directors of the principality, and an attempt made at a description of various temples in foreign lands, the authors are few, and confined to one or two families, who have never passed the confines of the State, and whose natural talents have been in no way whatever either fostered or cultivated.

The following translated essay on the origin of Europeans may serve as a specimen of former enlightenment, the document having been produced during his course of examination by one of the Kolhapoor aspirants for a Government situation :—

Pleased with the conduct of his followers, the monkeys, while at war with Rawun, King of Lunka (Ceylon), Rama wished to give them a banquet ; but as the monkeys possessed no sense of taste to appreciate the feast, he created two lakes, one having power to transform the monkeys, on bathing, into human beings, and the other to restore them to their original shapes.

Eighteen leaders or chiefs of the monkeys, however, after the change, objected to their original forms, as they preferred remaining human beings ; and to elude Rama's resentment, they had recourse to Seeta, his wife, who left them afloat on the great sea on eighteen Drones (leaves formed into round platters,) and gave them her blessing that they should be supreme lords of whatever coast they might reach. The descendants of twelve of these transformed monkeys are now enjoying great power in the lands they respectively reached, and the Drones were formed by them into hats, which they now wear on their heads.

Their names are—

| 6. The Dutch. | 12. The Mán Chinese. |

CHARITABLE INSTITUTIONS NOT EDUCATIONAL.—The necessity of public charitable institutions is partially avoided by the Government aid, which was formerly very liberally supplied to individual distress in small grants of land, for the loss of life of the working members of the family, and in the reception and care of illegitimate children, which were nurtured by the State, and also by

the extensive ideas prevailing on private charity, which precluded the departure of the beggar from the door without the reception of alms.

The Dhurmadao and Dewusthan allowances, which have been assigned for religious and charitable purposes, have now become in Kolhapoor, as in other countries, hereditary Wutuns in the family of the original recipients. Kolhapoor is celebrated for liberality, notwithstanding her limited means, and the annexed statement shows the amount paid for the above purposes.

CHARITABLE INSTITUTIONS.—The annual feast called Gosavee Jewun, given to Gosavees, Byragees, and other beggars, was established about 135 years ago by his late Highness Sumbhaje Maharaj, in honour of his favourite deity Shiva, and has ever since continued to be attended by crowds of mendicants.

The expenses incurred on the occasion of the feast in 1836 amounted to Rs. 5,655-3-7, and the people who assembled to 11,256 souls, 4,000 Gosavees, 1,000 Byragees, and 6,256 beggars; and the average amount of annual expenses and attendance taken for the last seven years are Rs. 5,839-8-0, and 14,260 men, consisting of 4,060 Gosavees, 1,668 Byragees, and 8,532 beggars.

During the year 1851, however, when the sun entered the constellation of Capricorn, the season being held particularly sacred by the Hindoos, large crowds (in all 16,520 souls, 4,776 Gosavees, 1,100 Byragees, and 10,644 beggars) attended, and the expenses incurred amounted to Rs. 8,629-6-1.

The recipients sit in bands in the great square before the palace. The food for the Gosavees is prepared and served out by Hoozrias and other Murathas; ghee only is served out by Bramins. The food for Byragees is prepared and served by persons of their own class, and no other persons are allowed to interfere in its preparation.

The Muhunts and Nungas (naked) are attended to by the Raja personally, the remaining Gosavees, &c. by servitors, and presents are made by the Raja personally as follows :—

Muhunts, &c. from Rs. 2 to Rs. 50 each, with a corresponding proportion of Punchas (small Dhotees) and Shelas.

Gosavees, &c. 1 rupee and a Puncha to each man.

Eight annas and a Puncha to each woman.

Four annas and ditto to each child.

The beggars are granted the following presents :—

One measure of Khichree (rice and pulse mixed together), weighing about Rs. 50, and 4 pice in cash to each person, whether male or female.

One measure ditto ditto, and 2 or 3 pice to each child.

The Gosavees, &c. who are granted Rs. 2, receive a Shela in addition to a Puncha. Those who get more than Rs. 2 receive an additional Shela, at the rate of one Shela for every Rs. 2.

DHURMSHALAS.—On the introduction of British superintendency the buildings usually set apart for the traveller, the merchant, and the mendicant, were found to be entirely in ruins. The revenues of the country were not sufficient to support the licentious dissipation of the Court, and the stranger, unless under the Royal favour, was forced to seek shelter below the trees.

A great change, however, has been already effected: there is hardly a village throughout the State which cannot now offer a cover to the passing traveller; and in the town of Kolhapoor, besides twenty-two smaller buildings, erected at a cost of Rs. 7,000, two large Dhurmsshalas have been erected for the Hindoos and Mahomedans, at an expense of Rs. 4,000 respectively, and chiefly by voluntary subscription, capable of containing 4,000 people.

Besides the smaller places of resort in each village, there are six travellers' bungalows for European travellers along the line of road to Belgaum and the sea coast, and measures are in progress to complete the necessary accommodation on all the lines which are at present deficient in accommodation.

STATE OF LITIGATION AND CRIME.

Hereditary land, Wutun and Jageer, and their respective shares, form the most fruitful subjects of litigation, with the usual petty dealings among merchants and money-lenders, together with compensation for damage, and suits for maintenance and heirship to service.

Application for redress was formerly greatly repressed, chiefly from the entire absence of any separate court of civil justice, and from the prevailing system of bribery and corruption which pervaded the administration, and which precluded all appeal from wrong, unless the aggrieved party was well supplied with funds.

Four courts are now instituted for the administration of civil justice—those of two Moonsiffs, where cases to an amount of Rs. 5,000 are disposed of, that of the Sudur Ameen, who receives cases to an amount of Rs. 10,000, and that of the Political Superintendent, who receives suits above that sum, together with appeals from all the lower courts. The following return shows the number of Civil suits, the amount of property disposed of during the last five years, together with the amount of appeals received by the appellate from the decisions of the lower courts:—

| Year. | No. of Suits. | Amount involved. |
|---------------------------|---------------|------------------------|
| | | <i>Rs. a. p.</i> |
| From 1846 to 1852.. .. | 4,360 | 8,11,849 7 6 |

Appeals received from the Lower Courts.

| Years. | No. of Appeals. | Amount involved. |
|--------------------------|-----------------|------------------|
| | | <i>Rs. a. p.</i> |
| From 1846 to 1852. . . . | 290 | 1,25,925 7 7 |

The annual expenses of the various establishments are as follows, together with the average annual amount of fees which are received :—

| Names. | Principal Officers. | Karkoons. | Peons. | Sundee. | Annual Cost. | Amount of Fee received. |
|--------------------|---------------------|-----------|--------|---------|------------------|-------------------------|
| | | | | | <i>Rs. a. p.</i> | <i>Rs. a. p.</i> |
| Appeal Court | 1 | 2 | 1 | .. | | 969 0 0 |
| Sudur Ameen | 1 | 5 | 11 | 9 | 4,541 14 8 | 3,755 7 11 |
| Moonsiff | 2 | 11 | 6 | 40 | 6,030 12 7 | 4,957 12 5 |
| Nazir | .. | 1 | 4 | 20 | 451 11 3 | |

In money transactions, a greater amount is to be observed generally than elsewhere of usurious cupidity. The debtor, after remaining a few years in the books of the Sowkar, is hopelessly involved, even according to the terms of his own bond, and forgery, false accounts, and lying evidence, are frequently resorted to on both sides.

In cases of Wutun dispute the Mahar and lower castes are the most inveterate, and inclined to litigate, regarding the property which during a course of years has become subdivided into very minute portions; and in cases of application for maintenance, old ladies who have lost their powers of fascination and young spendthrift sons are the chief applicants, for, generally speaking, the nation is proverbially kind to poor relations, even of very distant kin, and the quarrel is seldom commenced by the head of the family.

The civil business is carried on, and decrees are executed in the usual manner, in accordance with the spirit of the Bombay Code of Regulations, by distraint of property, with the exception of houses, and the implements of husbandry and trade.

Personal restraint, however, has not been introduced for debt, and generally, as the transactions occurred under a very different system of rule, attention in all settlements is paid to the previous custom and usage of the country.

Private arbitration is encouraged in every possible manner; the courts which have been established are found sufficient for the wants of the nation; and cheap justice can be now obtained by the most humble individual in the land.

STATE OF CRIME.—In former days Kolhapoor was notorious throughout Western India for the prevalence of piracy and pillage, together with all the

minor crimes and evils consequent on a mercenary Government, and a total absence of police arrangement; and the territory still presents a return in excess of the adjacent countries.

The present generation was nurtured in very strange ideas with regard to plunder, wholesale and retail: many are alive who followed the Kōlhapoor banner in all its devastating progress on every side of the little principality. The late Raja is reported to have entertained his own private band of desperadoes, and offered a glaring example of evil. The successful attempts beyond the boundary at private pilfer and gang robbery form the exulting theme of their evening tale; and although by stringent police measures the evils have considerably abated, the roving spirit of appropriation is by no means entirely subdued. The nation altogether, and more especially that unsettled portion who are usually found to be engaged in crime, are reckless and licentious, accustomed to a very capricious treatment,* and difficult to be dealt with by ordinary rule, and the crimes committed are those chiefly which indicate a disregard to control, and which result from fierce unchecked passion.

The administration of the former Government has also created a very great confusion of idea with regard to the principles of abstract right and wrong, and by the predominant system of a commutation of all punishment into a money fine, the prevention of the offence was at variance with the personal interests of the authorities, no check was placed on the predatory tribes, and a large turbulent body of ill-paid military retainers was permitted to imperil the peace of society.

From various returns it would appear that morality decreases from the wild and uncultivated parts of the country about the Ghauts to the more civilized villages on the plain: in the former the return does not exceed the rate of one per cent. of the population, whilst in the more wealthy districts on the north and east, which, however, border the Putwurdhun estates and the Satara country, and where it is more difficult to preserve a due surveillance, the return in the more heinous offences may be computed at eight per cent. of the population.

The Braminical class sustains an unenvied notoriety in the register of crime, and forms one-sixth of the total number of apprehensions. Old offenders and

* During all investigations under the former Government, torture was usually applied, and prisoners and witnesses were altogether very grossly maltreated.

In more trivial cases, whipping and beating until the victim fell senseless were usually resorted to, or exposure to the sun with heavy stones on the head; and in the latter practice a refinement in cruelty was exercised—a small piece of stone being in the first instance placed upon the skull, the weight of the large fragment was thus concentrated on one point, and the suffering greatly increased.

In more heinous offences individuals were suspended from trees with their heads downwards, red hot pincers were applied to the more tender parts of the body, and hides filled with raw flesh were bandaged to the stomach, and left attached to the sufferer until mortification ensued.

females also form a similar proportion, and of the remaining number about one-sixth may be apportioned to juvenile, and two-sixths to middle-aged offenders.

The following return gives a contrasted statement of the more heinous offences which were committed throughout the principality during the period from 1846 to 1852 :—

Statement showing the Number of Cases tried by the Nayadlish, Mamlutdars, &c. from the Year 1846 to 1852.

| Number. | Offence. | By the Political Superintendent and Nayadlish. | | | | | | | | By the Mamlutdars, Karbharees, Kotwal, and Jageardars. | | | | | | | |

During the same period six executions took place for capital offences, and the loss of life by accidental causes amounted to 637, and by suicide to 202.

In 1851, 482 prisoners were placed on trial before the Native Judge for the more heinous offences, of whom 146 were acquitted, and 336 were convicted and sentenced as follows :—

| | | | | | | |
|----------------------------------|----|----|----|----|----|-----|
| Imprisonment above 2 years | .. | .. | .. | .. | .. | 13 |
| Ditto for 1 to 2 years | .. | .. | .. | .. | .. | 18 |

| Flogged and discharged | .. | .. | .. | .. | .. | 1 |
| Fined.. | .. | .. | .. | .. | .. | 144 |
| Total.. | | | | | | 245 |

The Jail, which can accommodate 200 prisoners, was built in the year 1848, at an expense of Rs. 12,000. The city aqueduct supplies a never-failing fountain in the interior square. There is a separate ward for females, together with a separate hospital for the sick, and the locality has hitherto proved remarkably healthy,* the annual return of mortality being under one per cent. The male prisoners are employed in making roads, clearing streets, &c. and the female prisoners in grinding grain; the annual cost of feeding and clothing a prisoner amounts to a sum of about Rs. 15-12-0.

In 1851, of the 175 prisoners in confinement, 135 were males, and 40

* Vide page 189.

females; 131 were unable to read and write, and 44 had been educated. One prisoner was under the age of 15 years, 4 under 20, 69 under 30, 64 under 40, 24 under 50, and 13 prisoners above that age.

In 1852, of the 142 prisoners in confinement, 109 were males, and 33 females; 136 were unable to read, and 6 had been educated; 7 prisoners were under the age of 20 years, 65 under 30, 51 under 40, 14 under 50, and 5 prisoners above that age.

The following statement shows the amount of property stolen, and the amount recovered, during the years 1846 to 1852.

| Years. | Value of Property stolen. | Value of Property recovered. | Value of Property not recovered. |
|------------|------------------------------|---------------------------------|-------------------------------------|
| | <i>Rs. a. p.</i> | <i>Rs. a. p.</i> | <i>Rs. a. p.</i> |
| 1846 | 1,545 11 3 | 701 6 0 | 844 5 3 |
| 1847 | 14,183 6 5 | 6,427 9 3 | 7,755 13 2 |

| Total. . . | 74,012 12 10 | 23,827 12 1 | 50,185 0 9 |

A large quantity of liquor is consumed by the Mahomedans, Murathas, and lower castes of Hindoos. The vice of drinking, however, existed in full force before British superintendence was introduced, both in the capital and throughout the rice districts: this is the result in the former locality of licentiousness, while in the districts, liquor is regarded by the cultivators as necessary for their health, when engaged in their avocations among mud and wet.

It would appear that out of a population of 24,216, 600 individuals are in the daily habit of drinking, and out of this number 5 individuals exceed daily, and double that number at least four times during the month, until they become totally insensible. The usual quantity taken is about a pint, costing from 2 to 3 annas. Crime, however, does not appear to be increased in consequence, and great allowances are always made in cases where drunkards are engaged.

The 24 Jageerdars, 6 Mamlutdars, and the City Kotwal, are respectively entrusted with criminal powers to settle minor cases, and award punishment to an extent of three months' imprisonment with hard labour, and a fine of Rs. 50; and besides these minor authorities, there are two courts for the administration of criminal justice, whose powers are limited to three and seven years' imprisonment, the Nayadhis Native Judge, and the Superior Court, which consists of the Political Superintendent, assisted by Native Assessors; all capital sentences, and sentences of imprisonment beyond the term of seven

years, are submitted for the review, and confirmation or amendment of the Governor in Council.

The Political Superintendent also hears appeals from all the inferior courts.

The expenses of the various Courts of Criminal Justice are as follows :—

| Courts. | Principal Officers. | Karkoons. | Peons. | Sundee. | Annual Cost. | | |
|------------------|---------------------|-----------|--------|---------|--------------|-----------|-----------|

| Kotwal | .. | 950 | 0 1 |

Total.. ..Rs. 8,069 13 1

Considering the indifferent character of the large population of Kolhapoor, and the former very lax mode of administration to which the inhabitants from their youth have been accustomed, the latter state of crime may be considered as satisfactory ; and whilst in some parts of the country the inhabitants still cling with fond tenacity to their ancient custom of raising the wall, and digging the breach, and encircling themselves with defences, which contributes little to the preservation of their property, and is likely to produce evil to the state of their health, in other portions of the territory, and more particularly in the immediate vicinity of the capital, the inhabitants appear to be fully imbued with a feeling of perfect security.

Individual farms and holdings are beginning to be erected in the outlying fields, the daily toilsome trudge for man and beast is avoided, the cultivation can be more carefully attended to, and on the spot where, previous to our connection with Kolhapoor, no person was safe after night-fall from depredation, the ryots with their families now repose in peace in their separate houses, at a distance of some miles from any protecting force.

POLICE.—The system of rural police is well adapted for the required purposes. In every village there are a certain number of Shetsundee militia, both horse and foot, who formerly rendered martial service for their small hereditary grants of land. The land has been continued, and the police duties have been entrusted to this class, under the Police Patel of the village.

A certain portion sleep at the Chowree during the night, and take the nightly guard; others line the roads on bazar days, protect passes and jungly wastes, and assemble when called out in mass, whilst detachments of trained horse and foot are stationed at the head quarters of each district.

Orders are issued by the Police Patel, who has also the charge of mustering the predatory tribes, of granting them passes, without which they cannot leave their villages, and of keeping a general supervision over the villagers, and over all strangers who may make their appearance.

A Shaikdar has the surveillance over a certain number of villages, and the Mamlutdar superintends the district generally.

Should a disturbance of any description occur, the village horsemen are despatched with the intelligence to the Mamlutdar. The report is taken in turn by the horsemen of the nearest localities, whose Shetsundees assemble, and when the Mamlutdar approaches, a very respectable force ought to be in readiness for tracking and pursuit.

In each district a Police Karkoon, attended by a party of 10 horsemen, is continually moving about during the season from village to village, to superintend the general arrangement, to report on the efficiency of the police agents, to obtain intelligence, and to afford any assistance which may be required.

The total number of Shetsundees employed on rural police duties is as follows :—

| No. | Description. | Beegas. | Value. | | |
|-------|-----------------------|---------|------------|-----------|-----------|
| | | | <i>Rs.</i> | <i>a.</i> | <i>p.</i> |
| 241 | Horse militia | 5,905 | 30,031 | 4 | 0 |
| 1,705 | Foot ditto | 8,525 | 32,090 | 4 | 4 |
| 365 | Ditto Itlak | | 15,054 | 8 | 0 |

The annual average proceeds of each individual employed on police duties are as follows :—

| No. | Description. | Annual Expenditure. | | |
|-----|---------------------------|---------------------|-----------|-----------|
| | | <i>Rs.</i> | <i>a.</i> | <i>p.</i> |
| 294 | Trained horse | 76,923 | 0 | 0 |
| 596 | Ditto infantry | 52,000 | 0 | 0 |
| 693 | Police Patels | 11,086 | 7 | 1 |
| 15 | Visiting Karkoons | 2,349 | 0 | 0 |
| 62 | Shaikdars | 6,720 | 10 | 9 |
| 6 | Mamlutdars | 7,200 | 0 | 0 |

Independent of the rural police, each district is furnished with a body of Seebundee, amounting altogether to 3,056, and receiving a monthly pay of Rs. 4,128-8-0, who are armed with sword and shield, and are generally stationed at the head quarters of the district for any emergency.

A small body of policemen has been also organized for the protection of the city, and a further party is stationed at Punala, which in former days was notorious as the head quarters of depredation. The former amounts to 1 Naik and 29 men, the latter to 2 Naiks and 25 men.

Formerly gang robberies, burglaries, and petty thefts were very numerous, but of late years they have been greatly discontinued.

The recovery of stolen property, depending considerably on accidental circumstances, hardly affords a fair criterion to judge the efficiency in the police, but the return of one-third having been recovered during the seven years of its existence, out of the large amount of Rs. 74,000 carried off, would at least evince activity, and indeed there have been very few cases hitherto which have entirely baffled the sagacity of the establishment.

Crime of the more heinous descriptions is decidedly on the decrease. This, perhaps, may be attributed also to other causes, but the comparative number of apprehensions and punishments may be fairly taken as a proof of zealous endeavour; and the Kolhapoor police establishment may be altogether considered as tolerably efficient. It will improve by experience, and is even now perfectly capable of performing the duties involved, especially if retained under the influence of active and intelligent agents.

COMMERCE.

MANUFACTURES.—The manufactures of Kolhapoor are confined to coarse cotton cloth; woollen Cumblees, and Numdas; Goor and sugar; oil, paper, snuff, liquor and perfume; baskets and mats; carpets; Goonpat, and cotton thread; pottery, glass, and lac ornaments; charcoal; leather; and iron.

CLOTHS.—The principal articles of cloth manufactured in Kolhapoor are Khady or Sarees; Dungury or Pugrees; Joté or Shelas; and Puncha or Dhoturs; but all these fabrics are of the coarsest description.

Khady, Joté, and Punchas are manufactured by Koshtees of two castes, the Hindoo and Lingaet.

The Lingaet Koshtee manufactures Sarees and other cloths, in which coloured thread is used, and the coloured thread is furnished by a class of dyers called Rungar, who use castor oil and Soorungee root in their dye, which accounts for the oily appearance and the very unpleasant smell of those fabrics.

Turbans and Shelas are made by a class of Mahomedans termed Momeens.

The average number of cotton cloths of all descriptions annually made may be reckoned at 233,421, of the aggregate value of Rs. 3,37,422: of the entire number of cloths manufactured, 197,972 are consumed in the country, and 35,449 pieces are exported to the estates of the Putwurdhun, and the sea-port of Rajapoor. The total number of working looms is 1,642.

Statement showing the Quantity of Cotton required for the Manufacture of each Cloth, and the Price at which it is sold.

| Number. | Particulars. | Quantity of Cotton re- quired for each Cloth. | | Sundry other expenses. | Current Mar- ket Price. | Dimensions. |

| 14 | Shelas (sash) | 1 | .. | 0 3 2 | 0 4 0 | 24 cubits long, and 1½ span broad. |

WOOLLEN CUMBLEES.—The Kolhapoor cumblee is generally 9 feet long, and $3\frac{1}{2}$ feet wide.

The wool required for a fine cumblee costs 6 annas, and for a coarse or common one 4 annas and 6 pies.

A paste, prepared by boiling dried tamarind seeds in water, is in the first instance applied with a brush, to render the worsted smooth and straight. This is done in the open air, after the worsted thread has been cut and sorted of the required length, and stretched, and on becoming dry the cumblee is made by the usual process of weaving. The general price given for a cumblee is from 13 annas to 1 rupee.

The actual cost is as follows :—

| | |
|-------------------------|-----------|
| Wool | 6 annas. |
| Sundry articles | 2 „ |
| Wages | 4 „ |
| <hr/> | |
| Total.. .. . | 12 annas. |

Cumlees are in much request among the lower classes, and, combining usefulness with cheapness, are considered to be absolutely necessary for the preservation of the health of all those persons, more particularly cultivators and shepherds, who are constantly exposed to cold and rain. The higher classes use the more expensive article, which is imported from the Carnatic.

Cumlees are manufactured by Sungurs, of whom there are about 5,180 families. The worsted thread is furnished by the Dhungurs or shepherds, who not only tend the flocks, but also spin the thread.

The number of cumlees annually manufactured is about 100,000, valued at Rs. 1,00,000, which amount, after deducting the cost of the raw material, Rs. 33,333, would allow a sum of Rs. 54,667, or an annual sum of about Rs. 11 to the expenses, and a sum of Rs. 12,000, or Rs. 2 as the net annual profit to each loom engaged in this manufacture.

NUMDAS.—Numdas, varying in size and quality, are made in Kolhapoor, chiefly by Mahomedans, although at times also by the Hindoo Pinzarees.

The following materials are required to manufacture a Numda of medium quality, and of the following dimensions— $6\frac{1}{2}$ feet in length, and $5\frac{1}{2}$ feet in breadth :—

| | |
|----------------------------------------------------------|-----------|
| Wool, 3 pukka seers, value | Rs. 0 8 0 |
| Refuse of the nuts of the Kurunj tree (Galedupa arborea) | |
| after the oil has been extracted, 64 ounces.. .. . | 0 0 5 |
| Country soap, 1 ounce and 6 drachms avoirdupois | 0 0 3 |

Total.. ..Rs. 0 8 8

The wool is first sorted into packs of black, white, and grey, and combed separately. A piece of thick Dunguree cloth, of a larger size than the intended Numda, is then spread on an even floor, and sprinkled with water,

and a thin layer of white wool is laid on the cloth, according to the depth required for the border; and the inner space is filled in with black wool. A thick solution obtained from the refuse of the Korunjee nuts is afterwards thrown over the mass, and grey wool is then spread over the entire surface, when a further quantity of soap solution is plentifully applied. The ends of the Dunguree cloth protruding on each side are now folded over, so as to overlap the entire Numda. The cloth is then carefully rolled up, tied at each end, and submitted to pressure. It is unrolled and reversed, and again pressed, and this process is continued, commencing from every side, until all the portions of wool have subsided smooth and even.

It is then taken out of the cloth, and placed for a day to dry in the sun.

Two men can make one Numda in a day, and the cost is as follows:—

| | | | |
|-------------------------------------------|-------|---|---|
| Value of articles as stated above | Rs. 0 | 8 | 8 |
| Wages of 2 men for 1 day | 0 | 3 | 4 |

Total.. ..Rs. 0 12 0

The bazar price of the medium Numda is 13 annas, thus leaving 1 anna as profit to the manufacturer.

In the manufacture of figured Numdas, coloured wools, according to the proposed pattern, are in the first instance spread on the Dunguree cloth, and upon these the Numda is formed by the same process as explained above.

Eighty-four candies of wool, valued at Rs. 1,800, are annually manufactured into Numdas. The bazar value of the manufactured article is estimated at Rs. 3,600, leaving, after a deduction of Rs. 1,440 for the expense of labour, a net profit of Rs. 360, or about Rs. 25 annually, to the small number of manufacturers.

GOOR OR JAGREE.—The mill at present used in Kolhapoor for expressing the juice of the sugar-cane consists of two vertical rollers, about 4 feet in circumference, $4\frac{1}{2}$ feet in height, made of babool wood, having near their upper ends deep spiral screws, so fitted into each other that both the rollers revolve when a rotatory motion is applied to either. These rollers are mounted in a strong wooden frame, the whole being fixed by piles driven into the ground. The bottom of the roller rests on a wooden block, placed in the centre of a pit 8 feet long, 6 feet broad, and 3 to 4 feet deep. One of the rollers is prolonged about 2 feet above the frame-work, on which a beam 11 feet in length is fixed, and to this four bullocks are yoked to turn the mill. In some parts of the Alte Peta the remains of stone mills are to be seen, but since the introduction of the wooden vertical mill, these have been abandoned. The stone mills consist of a large stone with a cavity in the centre, resembling a mortar, in which the canes are crushed by the rolling motion of a pestle, which rests in an inclined position against the side of the mortar, and is worked by bullocks yoked to a horizontally connected bar. The expressed

juice runs off into an earthen pot, through a hole bored obliquely in the lower part of the stone cavity. In using these mills, the canes were required to be cut into very small pieces, and thus the refuse was rendered useless for fuel.

The process of expressing the juice and boiling it into Goor is always carried on during the night, the juice being highly susceptible of fermentation, and, during the heat of the day, becoming sour in the space of an hour after leaving the mill.

Fifteen men and sixteen bullocks are required daily to work one mill, and to tend the boiler. Four men, called the Phurkurees, are employed in cutting the cane and stripping off the leaves ; and this operation must be adjusted to keep pace with the action of the mill, so that the canes may be ground while fresh.

Two men, called Moolkias, are employed in conveying the cane from the Phud or plantation to the mill.

One man, called the Kandkia, is employed in dividing the sugar-cane brought from the plantation into pieces of about a yard in length. The top portion, with the joints, is reserved for seed, whilst the other pieces are tied up in bundles, and carried to the mill. The upper sprouts of the cane are also used as food for the cattle.

Five men are employed at the mill : one, called the Bhurkowlia, applies the cane in a regular layer to the opening between the rollers, which seize and compress the canes as they pass ; the second, called the Haindkowlia, sits opposite to the feeder, and receives the cane as it passes between the rollers, an operation which is repeated three several times, so that on leaving the roller the third time the canes are reduced to the form of dry splinters, which are called Chipad, and used as fuel in boiling the juice. The other two men are employed in driving the bullocks yoked to the mill, and are termed Pathakias. The fifth man is employed in conveying the juice, which falls into an earthen vessel fixed at the foot of the rollers, to the boiler.

The next process after the juice is expressed is that of separating the sugar, which is effected by boiling the juice in an open iron boiler, termed a Kahil. This boiler is placed over a stove, and heated by a long flue. The heat is kept up until the juice begins to boil, and the proper heat is indicated by the scum rising in bubbles, and breaking into white froth.

With the scum which rises during this operation, all impurities are thrown up, which are carefully removed with a bamboo sieve.

A handful of ashes made from the stem of the Agada is added to the juice whilst boiling, for the purpose of clarification.

When the juice is sufficiently evaporated, it is removed into a wooden trough to cool, and from thence put into moulds made in the ground, and in these it settles into a dark brown coloured mass called Goor or Jagree, in which state it is brought to the market.

To ascertain whether the juice has attained the requisite consistency, a few drops of the syrup are taken between the thumb and forefinger, and made

into a ball : should the syrup adhere to the finger, it has reached the proper point of boiling.

Two men are employed at this work, one called the Gool Rande, who tends the boiling, and the other, called the Chooljalea, who attends to the fire at the stove. The latter is generally the work of village Mahars, who receive for their labour payment only in kind.

The best Jagree is obtained from the red cane juice ; that from the white and striped is apt to melt if exposed to the air, and to ferment if kept much confined.

About 4,296 candies of Jagree, valued at Rs. 1,20,539, are annually manufactured in Kolhapoor ; the average expense is estimated at Rs. 90,406, leaving a net profit of Rs. 30,133 to the manufacturers.

OIL.—Oils in Kolhapoor are extracted by two castes, the Lingaets or Pandra Tailee, and the Kunada or Kala Tailee : both are votaries of Mahadeo, and the Kala Tailees are the only people who will carry away the carcass of a dead elephant.

The oils generally used for lights or consumption, and which are always procurable in the market, are extracted from—

The Kurdee seed (*Carthamus*).

The Korta or Karala seed (*Vernonia anthelmintica*).

The Bhooeemoog (*Arachis hypogea*).

The Ambadee seed (*Hibiscus cannabinus*).

The Khobra (dried kernel of *Cocus nucifera*).

Oils are also extracted from the following seeds, but only when there is a demand for any particular kind.

From the Til seed, sesamum seed, used for lights as well as eaten.

From the Mhowrea, mustard seed (*Sinapis racemosa*), used for preserving pickles.

From the Juwus seed, linseed (*Linum usitatissimum*), used by painters.

From the Kureed Kangonee, heart pea (*Cardiospermum horticocolum*), used medicinally.

From the Tumbakoo seed, tobacco (*Nicotiana*), used for burning.

In extracting oil from most of the above seeds, the Kurdee is invariably mixed in equal quantity, in consequence of its containing a greater portion of unctuous matter.

The average quantity of oil extracted from the above seeds, together with the cost and profit, are estimated as follows:—

Ambadee Oil.—Ambadee seed, Kailee, 1 maund, or 48 pukka seers, mixed with a similar quantity of Kurdee seed, will produce 17½ pukka seers of oil, and 5 maunds of Paid, or oil-cake.

| | | | | | |
|----------------------------------|----|----|----|----|------------|
| 17½ pukka seers of oil are worth | .. | .. | .. | .. | Rs. 3 0 11 |
| 5 maunds of Paid ditto | .. | .. | .. | .. | 0 12 0 |

Total. ..Rs. 3 12 11

Expenses :

| | |
|---------------------------------------------------------|------------------|
| 2 maunds of Kurdee and Ambada are.. .. | Rs. 2 2 3 |
| Feeding the man and bullock during the extraction | 0 3 11 |
| Total.. .. | <u>Rs. 2 6 2</u> |

Leaving a profit of.. ..Rs. 1 6 9

Bhooeemoog Oil.—Bhooeemoog Kailee 1 maund and 2 pylees, or 54 pukka seers, and Kurdee seed same quantity, will produce 17 seers of oil, and 5 maunds of Paidnd.

| | |
|---------------------------------|-------------------|
| 17 seers of oil are worth | Rs. 3 0 2 |
| 5 maunds of Paidnd ditto | 0 12 0 |
| Total.. .. | <u>Rs. 3 12 2</u> |

Expenses :

| | |
|----------------------------------------------------------------------|--------------|
| 2 maunds and 2 pylees of Bhooeemoog and Kurdee seeds are about | Rs. 2 0 6 |
| Labour and feed of bullock | 0 3 11 |
| | <u>2 4 5</u> |

Total profit.. ..Rs. 1 7 9

Korta or Karala Seed Oil.—Korta 14 pylees, or 42 pukka seers, and Kurdee 1 maund and 2 pylees, or 54 seers, will produce 24 seers of oil, and 5 maunds of Paidnd.

| | |
|---------------------------------|-----------|
| 24 seers of oil are worth | Rs. 4 4 0 |
| 5 maunds of Paidnd ditto | 0 12 0 |

Expenses : Total.. ..Rs. 5 0 0

| | |
|-------------------------------------------------------------|---------------|
| 1 maund and 2 pylees of Kurdee and 14 pylees of Korta | Rs. 2 7 2 |
| Labour and feed of bullock | 0 3 11 |
| | <u>2 11 1</u> |

Total profit.. ..Rs. 2 4 11

Khobra or Cocoanut Oil.—Cobra or dried kernel of the cocoanut, 2 maunds, or 24 pukka seers, will produce 1 maund of oil and 1 maund of Paidnd.

| | |
|---------------------------------------------|-----------|
| The price of 1 maund of Khobra oil is | Rs. 4 0 0 |
| Ditto of 1 maund of Paidnd ditto | 0 2 6 |

Total.. ..Rs. 4 2 6

Expenses :

| | |
|----------------------------------|--------------|
| 2 maunds of Khobra | Rs. 4 0 0 |
| Labour and feed of bullock | 0 0 6 |
| | <u>4 0 6</u> |

Profit on every maund.. ..Rs. 0 2 0

To extract 1 maund of Khobra oil consumes the labour of half a day.

Oil is also extracted from the Kurunjee seeds (*Galedupa arborea*) towards the Konkun, and used only for lights.

The Koonbee women also extract oil from the following seeds :—

Yérundea, or castor oil seed (*Ricinus communis*), used for lights and as physic.

Peola Dhotra (*Argemone Mexicana*), Jamaica yellow thistle, used as ointment for cutaneous diseases.

Monglee Yerundee seed (*Jatropha Curcas*), angular-leaved physic nut, used for lights, as well as medicinally.

The oil-mill of Kolhapoor is very simple in construction. It consists of a wooden trough, which holds the seeds, and a wooden cylinder about 4 feet high, fitted upright into the centre of the trough, with a heavy cross-beam on the top in a standing position, one end of which rests about a foot from the ground. A semi-circular block of wood is attached to the lower part of the trough, with a piece of wood projecting, and forming a right angle, with the upper beam at the end nearest the ground. On this piece of wood a large stone is placed, and communication with the upper beam is effected by means of ropes playing on a pulley, and as the ropes are tightened, and the block rises, the pressure of the cylinder is increased. A bullock, blind-folded, is yoked to the upper beam. The bullock goes round the trough, and by the revolving of the cylinder the seeds are crushed, and formed into a mass, and by the pressure of the cylinder the oil is squeezed out, and falls to the bottom of the trough, while the residuum forms into a solid mass round the sides of the trough as oil-cake.

In some villages a hand oil-mill is used, which consists of a flat stone, about 5 or 6 feet square, with a hole in the centre, in which a stone pestle is made to fit upright. The seeds are put into the hole, and the pestle is turned with the hand. In the hand-mill the oil rises to the top, and runs out on the sides into a pot.

The quantity of seed held by one of the bullock mills at a time varies from 2 to 6 pylees, and the cost of a mill may be estimated from Rs. 20 to Rs. 25.

Four thousand candies of oil are annually expressed, valued at Rs. 1,20,000, which sum, after deducting a sum of Rs. 1,00,000 for expenses, and the price of the raw material, would afford a net profit of about Rs. 7 annually to each manufacturer.

PAPER.—Paper is manufactured in Kolhapoor by a class of Mahomedans called Kagdees.

The article manufactured is of coarse texture, but strong and glazed.

There are 18 paper-mills constantly at work in Kolhapoor, which afford daily employment for 666 individuals, being at the rate of 37 men to each establishment.

Paper is manufactured from hemp and gunny-bags. The fibrous material is in the first instance cut into small pieces, and after being cleansed is

immersed in water, previously saturated with chunam. It is then reduced to a pulp in a machine called a Dung.

This apparatus consists of a heavy wooden lever, to which a ponderous wooden pestle is attached. The lever is fixed by axes on two upright posts driven into the ground. At the end of the pestle nearest the ground two heavy iron teeth are fixed, each weighing about 10 lbs., the whole weight of the pestle being about 50 lbs.

The object of this apparatus is to pound the fibrous material into a pulp, to effect which two men are employed in alternately raising the pestle, and allowing it to fall with a heavy blow on a stone slab $2\frac{1}{2}$ feet square, firmly fixed in the ground, with a terraced floor round it.

Three men are required to work the Dung, two at the lever, and one to introduce the hemp, or Gunny, between the stone and the pestle.

From the tedious motion of the pestle, twenty hours are consumed in reducing 4 maunds of Gunny into a coarse pulp.

The pulp is then washed in a river or tank, by placing about half a maund in a piece of Dunguree gathered up at the corners, and tied to the waists of two men. These labourers stand in the water up to the waist, and keep continually stirring the mass, by which means all dirt and impurities rise to the surface, and are carefully removed. To wash 4 maunds of pulp takes three hours.

The pulp is then brought to the land, and the water allowed to drain off, after which about a quarter of a seer of Papur Khar (carbonate of soda) and 1 seer of chunam (lime) is added, and it is again pounded in the Dung during three successive days, for about ten hours each time, after which it is again washed, and 1 seer of country soap, and 1 seer of chunam are added. Four men are now employed to tread the pulp on a terraced floor for several hours. It is then made into large lumps, and left for four days to bleach and putrify, and on the fifth day it is again for the third time put into the Dung, which it leaves this time in the shape of a thin pulp.

The bleached and putrescent mass is now put into a chunam tank filled with water, 4 feet square and 4 feet deep. The mass is then well stirred with a bamboo, and the process of making paper commences.

The gelatinous mass is received on a mould called a Kasee, which consists of a wooden frame 3 feet long, $2\frac{1}{2}$ feet broad, and $1\frac{1}{2}$ inch deep, with cross iron bars at intervals of 3 inches. Over this frame is placed a matting, called a Chupree, made from the blade of the Kowal grass, woven with horse-hair. Over this matting another thin frame of wood is fitted close to the mould, this second frame being used to retain the stuff on the mould, and to limit the size of the sheet.

A man now sits with this mould in his hand on the edge of the tank, and, inclining the mould a little towards him, dips it into the tank, and lifts it again horizontally, giving it a shake to distribute the stuff equally on the mould. This is repeated three or four times, until a sufficient quantity of the pulp settles on the mould. The Chupree or matting is then taken off the mould,

and placed on a terraced floor called a Buksar. On depositing it on the Buksar, the side on which the paper is formed is turned towards the floor, and pressed with the hand to squeeze out the water, after which the Chupree is carefully taken up, and the sheet of paper remains deposited on the floor. Sheet after sheet is thus taken off and laid one over the other in a pile, until the pulp in the tank is exhausted.

The pile is then introduced between two stout boards, over which a couple of heavy stones are placed, and a man keeps stamping on the board with his foot to squeeze out the superfluous water. The sheets are then carefully separated one by one, and plastered to dry on the house walls, which are in the first instance washed with white mud and water. As the water is absorbed the paper dries and falls to the ground. The paper at this stage is called Rusth. It is then again hung up in the sun for a short time to dry, after which it is made into a large pile, and pressed with great force, to render the sheets flat and smooth.

The paper now requires finishing, by being sized and polished. The size used in Kolhapoor is made of rice conjee mixed with pounded Toortee (alum), which is laid on both sides of the paper with a brush, and allowed to dry.

The next operation the paper undergoes is that of being polished, which is performed by placing it sheet by sheet on an even board, and drawing over it smartly a smooth flint-stone or shell, until it assumes a glazed appearance.

It is then transferred to the Ginger (a class of people who work in leather, horse-gear, and binding books, &c.) for the purpose of being cut, and the edges made even. This operation, on account of caste prejudice, the Kagdees are precluded from performing. After the paper is cut, it is counted into Dustas of twelve sheets, each folded and packed into Guddees of ten Dustas.

Three descriptions of paper are made at Kolhapoor, of different sizes, strength, and finish.

The first sort, called the Wahchey Kagud, is 18 inches long and 12 inches broad, and it sells at from Rs. 2-12-0 to Rs. 3 a Guddee of ten Dustas, each Dusta containing twenty-four sheets or Pans.

The second sort, called the Khurchee Kagud, and for which there is the greatest demand, is 14 inches long and 12 inches broad, realizing from 12 to 14 annas per Guddee of ten Dustas, each Dusta containing twelve sheets or Pans.

The third and inferior sort, called the Rusth, is neither sized nor polished. This paper is used as a wrapper, and is sold at from 8 to 10 annas per Guddee of ten Dustas, each Dusta containing twelve sheets or Pans.

Of the quantity manufactured, the annual consumption in the public offices of the State is valued at Rs. 5,000; the inhabitants purchase to the amount of Rs. 2,000, and the remainder is exported to Meeruj, Sanglee, and the adjoining Putwurdhun States.

An amount of Rs. 12,000 worth of paper is annually sold, which, allowing a sum of Rs. 2,500 for the value of the raw material and Moturfa tax, would

allow a sum of Rs. 9,500 as the amount of expenses and profit of labour, which, among the individuals employed, would yield an annual sum of about Rs. 15 to each individual.

SNUFF.—Two and a half seers of snuff can be prepared out of 5 pukka seers of tobacco, and the article is sold at the rate of Rs. $1\frac{1}{2}$ per seer; but the price depends greatly upon the care bestowed on the preparation, and if labour be neglected, the value of the snuff becomes less.

Mode of preparing Snuff.—The tobacco, after being dried in the sun, is beaten to powder, and sifted through a piece of cloth, and then washed in pure water in an earthen vessel called Chundungee, after which five limes, four plantains, citron or lime leaves, and mango leaves are mixed with the wet powder, which is rolled into balls of the size of a cocoanut, and placed into a bamboo basket, upon which Goonpat is placed in order to preserve a sufficient heat. After ten or twelve days the balls are taken out and dried in the shade; they are then placed in strong earthen pots, and rubbed and strained three or four times successively, and the refuse thrown away.

The snuff prepared in Kolhapoor is not so good and rich as the Wurtukee, which is prepared at Poona, or the snuff prepared at Sanglee.

The actual cost of preparing the above quantity of snuff is as follows:—

| | | | | | |
|------------------------------------------------------|----|----|----|----|------------|
| Wages of 1 man for 5 days for rubbing the tobacco, | | | | | |
| at Rs. 4 per month.. | .. | .. | .. | .. | Rs. 0 10 0 |
| Ditto for 3 days for straining ditto, at Rs. 3 ditto | .. | .. | .. | .. | 0 5 0 |
| Cloth for a sieve, 4 yards | .. | .. | .. | .. | 1 0 0 |
| Tobacco, and sundry things | .. | .. | .. | .. | 1 5 0 |
| Total.. | | | | | Rs. 3 4 0 |

Statement showing the Consumption of Snuff in the Kolhapoor Territory, with the Profit derived on the Sale.

| Quality. | Amount of Quantity in Candies. | Rate per Candy. | Value. | | | Sale of the Snuff in Kolhapoor. | | |
|-------------------------------------|--------------------------------|-----------------|--------|-----|----|---------------------------------|----|----|
| | | | Rs. | a. | p. | Rs. | a. | p. |
| First or best sort | 1½ | 180 | 270 | 0 | 0 | 337 | 8 | 0 |
| Second or middle sort | 3 | 100 | 300 | 0 | 0 | 375 | 0 | 0 |
| Third or inferior sort | 1½ | 60 | 90 | 0 | 0 | 112 | 8 | 0 |
| | 6 | .. | 660 | 0 | 0 | 825 | 0 | 0 |
| | | | | | | 660 | 0 | 0 |
| Profit arising in the sale of snuff | | | Rs. | 165 | 0 | 0 | | |

A sum of from Rs. 400 to Rs. 600 is annually realized by the State from the contract of the monopoly for the sale of this luxury in the territory, which sum is included in the retail dealings.

LIQUOR.—The Abkaree or liquor contract of Kolhapoor annually realizes from Rs. 11,000 to Rs. 13,000, and the privilege of distilling spirituous liquor for consumption is held by one contractor, from whom the retail vendors obtain their supplies. The contract for the different Petas is sub-let by the contractor to the highest bidder, and the following may be taken as an average of the annual realization from each Peta :—

| Petas. | | | | | | | Number of Distilleries. | Average Amount paid to the Contractor. | | |
|------------------|----|----|----|----|----|----|-------------------------|----------------------------------------|----|----|
| | | | | | | | | Rs. | a. | p. |
| Kurweer Peta .. | .. | .. | .. | .. | .. | .. | 60 | 1,535 | 0 | 0 |
| Sherole ditto .. | .. | .. | .. | .. | .. | .. | 28 | 490 | 0 | 0 |
| Bhoodurgur ditto | .. | .. | .. | .. | .. | .. | 29 | 1,444 | 0 | 0 |
| Gur Ingluz ditto | .. | .. | .. | .. | .. | .. | 12 | 215 | 0 | 0 |
| Punala ditto .. | .. | .. | .. | .. | .. | .. | 42 | 1,308 | 0 | 0 |
| Alte ditto .. | .. | .. | .. | .. | .. | .. | 50 | 1,439 | 0 | 0 |
| Total .. | | | | | | | 221 | 6,431 | 0 | 0 |

In the town of Kolhapoor there are about 30 retail shops, and in the British and civil camps 6 shops, to which liquor is supplied by the contractor.

The annual consumption in the town of Kolhapoor and the two camps may be estimated at about 9,600 gallons of liquor, valued at about Rs. 18,000.

Liquor is made in Kolhapoor from Jagree and the bark of the Heewar by the common process of fermentation and distillation, the following being the proportion of ingredients used, and produce :—

Four maunds of Jagree, mixed with 8 seers of Heewar bark, will produce 13 gallons of liquor, called by the Natives Rasee, of specific gravity 993,* and 13 gallons of Doobara, or double distilled, of specific gravity 982.*

The liquor called Rasee Daroo, being the product of the first distillation, is of very inferior quality, containing little alcohol ; and is sold at the rate of 4 annas per quart bottle.

The Doobara or double distilled liquor has been found by experiment to contain in 720 grains Troy weight about 420 grains of alcohol, and 300 grains water, and is nearly as strong as brandy procurable in this country, sold at 8 annas per quart bottle.

There is a third sort of liquor made in Kolhapoor, called the Lal Daroo, or red liquor, of specific gravity 979, obtained by a third distillation, containing in 720 grains Troy about 540 of alcohol, and 180 of water, and is much stronger than brandy, sold at 10 annas per quart bottle.

Besides these descriptions of liquor, there is another intoxicating drink sold in Kolhapoor, called Painda or Boza, much used by the Mahomedans, and the lower castes of Mahars and Mangs.

* Taken at a temperature of degrees.

Painda is made by steeping the grain of the Jowaree (*Holcus Sorghum*), which is first ground into a coarse flour, with Nachnee (*Cynosurus corocanus*). When well mashed, it is put into an earthen pot, and allowed to stand and ferment for three days. On the fourth day it is strained, and the following ingredients are added in small quantities : Bhang (flower of hemp), Koochla (*Nux vomica*), and the leaf of the Bhooee Nimb (a species of *Melica*), when it is ready for sale.

The vendors of Painda pay annually from Rs. 250 to Rs. 275 to the liquor contractor.

The following statement may be taken as a fair calculation of the expense and profit of the contractor :—

| | | | |
|--------------------------------------------------------------------------------------------------------------|------------|--------|-----|
| Amount realized by sale of liquor in the town of Kolhapoor, and the British and civil camps, per annum | Rs. 18,000 | 0 | 0 |
| Amount realized by the sale of Peta contract.. | 6,431 | 0 | 0 |
| Amount realized by sale of Painda or Boza contract | 250 | 0 | 0 |
| | <hr/> | 24,681 | 0 0 |

Deduct expense :

| | | | |
|---------------------------------------------------------------------------------------------------------------|--------|--------|-----|
| Cost of material for the distillation of 9,600 gallons of liquor, including tear and wear of Still, &c. | 1,484 | 9 | 9 |
| Annual cost of establishment of Karkoons, Peons, &c. | 600 | 0 | 0 |
| Interest at 5 per cent. on Rs. 2,000, deposited as security | 100 | 0 | 0 |
| Premium to security, at 5 per cent. per annum, for Rs. 13,000 | 650 | 0 | 0 |
| Amount of contract paid to Government.. | 13,500 | 0 | 0 |
| | <hr/> | 16,334 | 9 9 |

Balance.. ..Rs. 8,346 6 3

From this deduct the sum allowed by the contractor to the liquor vendors as profit, at the rate of one bottle on every gallon purchased by them

276 14 9

Leaving a balance of.. ..Rs. 8,069 7 6

But the customers in this trade being the most dissipated characters of the community, a deduction of 25 per cent. may be made from the sum of Rs. 8,069-7-6, and further loss is suffered on account of bad debts. The value of the raw material is also very fluctuating, so that if a profit of 20 per cent. is made, the contract is considered as having been highly advantageous.

PERFUMERY.—The principal articles of perfumery produced in Kolhapoor

are Abeer or Booka (a kind of odoriferous powder), Oodbutees and Augurbutees (sticks coated over with scented substances), and Oodel (oil of frankincense).

The substances required for preparing Abeer are as follows :—

| Names. | Weight in Company's Rupees. | Price. | | |
|-------------------------------------------------------------------------------------|-----------------------------------|--------|----|----|
| | | Rs. | a. | p. |
| Burmee | 20 | 0 | 0 | 4 |
| Dried flowers of rose | 20 | 0 | 1 | 0 |
| Kuchora (dried root of the Zedoary plant Curcuma Zerumbet) | 20 | 0 | 0 | 3 |
| Sandal-wood | 20 | 0 | 1 | 0 |
| The dried flowers of the Ghonesuree | 20 | 0 | 1 | 0 |
| Juta Mowsee, a scented drug | 20 | 0 | 1 | 0 |
| Nagur Motha (the bulb of the Cyperus juncifolius or Cy- perus pertenuis) | 20 | 0 | 0 | 4 |
| Wala roots of the grass Andropogon muricatum | 20 | 0 | 0 | 3 |
| Krishnagur black sanders | 20 | 0 | 1 | 0 |
| Nukh, a fragrant substance, apparently some species of dried shell-fish | 2 | 0 | 1 | 0 |
| Kosht (a kind of Costus, Costus*Arabicus) | 20 | 0 | 0 | 6 |
| Putruj, a particular plant | 20 | 0 | 0 | 4 |
| Gowla, an odoriferous substance | 20 | 0 | 1 | 0 |
| Deodar wood (a species of pine, Pinus devodura) | 20 | 0 | 1 | 0 |
| Shilarus, (Gum Benjamin, or olibanum) | 2 | 0 | 1 | 0 |
| Total. . . | 264 | 0 | 11 | 0 |

All these substances are reduced to a fine powder, by being beaten in a stone mortar with an iron bar. The powder is sifted through a cloth, the coarser grains being again ground, beaten in the mortar, and sifted.

In this process substances of the weight of about 40 rupees are wasted.

The following substances are mixed and reduced to the consistency of paste, by being beaten in a mortar :—

| Substances. | Weight in Tolas. | Price. | | |
|----------------------------------------------|---------------------|------------------|----|-------|
| | | Rs. | a. | p. |
| Spirit of frankincense | 21 | 0 | 7 | 0 |
| Sandal-wood Uttur | 2 | 0 | 8 | 0 |
| Rosel oil, obtained from spice grass | 20 | 0 | 6 | 0 |
| Uttur of roses | $\frac{1}{2}$ | 0 | 8 | 0 |
| Uttur of Pach, an odoriferous plant | $\frac{1}{4}$ | 0 | 8 | 0 |
| Musk | $\frac{1}{8}$ | 1 | 15 | 0 |
| Total. . . | | Tol. Goons. | | |
| | | 43 $\frac{1}{2}$ | 6 | 4 4 0 |

This paste is mixed with the fine powder above alluded to, and the whole is again rubbed in the mortar with a crow-bar. The result is Abeer of a superior quality, which is sold at Rs. 4 per seer weighing eighty Company's rupees.

In the preparation of Abeer of an inferior quality, spirit of frankincense and rosel only, without the other substances just now enumerated, are used; it is sold at the rate of 14 annas per seer.

The total quantity of Abeer produced in the Kolhapoor State is 2 candies and 9 maunds, valued at Rs. 1,008; and as it is sold for Rs. 1,260, a profit of Rs. 252 is thus secured.

OODBUTEES AND AMBURBUTEES.

| Substances. | Weight in Company's Rupees. | Price. | | |
|--------------------------------------------------------|-----------------------------|-----------|---|----|
| | | Rs. a. p. | | |
| Burmee | 20 | 0 | 1 | 0 |
| Dried rose flowers | 20 | 0 | 1 | 0 |
| Wala roots of the grass <i>Andropogon muricatum</i> .. | 20 | 0 | 0 | 3 |
| Deodar wood | 20 | 0 | 1 | 0 |
| Frankincense 1 seer, or | 80 | 0 | 3 | 0 |
| Juta Mowsee | 20 | 0 | 1 | 0 |
| Nagur Motha | 20 | 0 | 0 | 4 |
| Sandal-wood | 20 | 0 | 1 | 0 |
| Nukh | 40 | 0 | 4 | 0 |
| Bdellium 2 seers, or | 160 | 0 | 1 | 6 |
| Kosht | 20 | 0 | 0 | 6 |
| Putruj | 20 | 0 | 0 | 4 |
| Krishnagur | 20 | 0 | 1 | 0 |
| Shilarus 1 seer, or | 80 | 0 | 8 | 0 |
| Dugud phool " | 80 | 0 | 1 | 0 |
| Total 8 seers, or | 640 | 1 | 8 | 11 |

These substances are reduced to a fine powder, in the manner already described, one-fourth of a seer being wasted in the process. To the powder are added musk one-twelfth of a tola, worth Rs. 2-6-0, solution of the charcoal of the Shenda or milk-bush (*Euphorbia Antiquorum*), 1½ seer.

The mixture is then reduced to a paste, by being beaten in a mortar. Small pieces of thin sticks are then coated with this paste. Sticks of a superior quality are sold at the rate of Rs. 3 per seer.

In the preparation of the sticks of an inferior quality, no musk is made use of. These are sold at the rate of 6 annas per seer.

The total quantity of sticks produced is 1 candy and 18 maunds, valued Rs. 804; and as they are sold for Rs. 1,005, a profit of Rs. 201 is secured.

The spirit of frankincense is prepared in the following manner:—

| Substances. | Weight in Seers. | Price. |
|---------------------------------|------------------|------------------|
| | | <i>Rs. a. p.</i> |
| Frankincense | 1 | 0 3 0 |
| Oil of the sesamum seed | 2 | 0 1 6 |
| Total. | 3 | 0 4 6 |

Frankincense is burnt, and the extracted oil is mixed with the sesamum seed oil; the result is Oodel (spirit of frankincense).

The total quantity of Oodel produced in the Kolhapoor State is 3 maunds $1\frac{1}{2}$ seer, valued Rs. 188. It is sold for Rs. 235, leaving a profit of Rs. 47.

Abstract of the above.

| No. | Names. | Cost. | Value. | Profit. |
|-----|--------------------------------|------------------|------------------|------------------|

BASKET AND MAT-MAKING.—Bamboos are first split into thin slices, about half an inch in breadth, and from these various articles of domestic use are woven by the lower castes, the manufactory giving employment to individuals of every age and sex. The straw of the Boorud grass is also used in the finer description of baskets, but of these a very limited quantity is prepared.

The following table exhibits full particulars regarding the articles made of the bamboo :—

| No. | Names. | No. manufactured. | Cost. | Price. | Profit to the Manufacturer. |
|-----|--------------------------------------|-------------------|------------------|------------------|-----------------------------|
| | | | <i>Rs. a. p.</i> | <i>Rs. a. p.</i> | <i>Rs. a. p.</i> |

| | Total. | 240,000 | 7,575 0 0 | 12,806 4 0 | 5,231 4 0 |

CARPETS.—Carpets are in great demand, chiefly, however, among the higher classes. The Kolhapoor manufactured articles are not of a superior quality, and are entirely used for home consumption. The best description of carpets are imported from the adjacent towns Kagul, Hooblee, and Belgaum.

Mode of Preparation.—Rolls of white, red, and blue cotton thread are in the first instance procured: the white thread is twisted by a spindle into long thick twine, and transferred to a loom, being intended to form the warp. Pieces of raw red and blue thread are then woven with the white thread, so thickly as to conceal the latter. The loom is worked sometimes perpendicularly, and sometimes horizontally.

The following table exhibits the number, &c. of carpets manufactured at Kolhapoor:—

| Particulars. | No. manu- factured. | Cost of each. | Price. | Profit to the Manufacturer. |
|--------------------------|------------------------|------------------|------------------|--------------------------------|
| | | <i>Rs. a. p.</i> | <i>Rs. a. p.</i> | <i>Rs. a. p.</i> |
| First sort carpets | 8 | 3 0 0 | 5 0 0 | 2 0 0 |
| Second ditto | 200 | 2 4 0 | 2 12 0 | 0 8 0 |
| Third ditto | 200 | 1 12 0 | 2 4 0 | 0 8 0 |
| Total . . | 408 | 7 0 0 | 10 0 0 | 3 0 0 |

The total cost of 408 carpets is Rs. 825, and they are sold for Rs. 1,040, leaving Rs. 215 as profit to the manufacturers.

GOONPAT.—A great demand exists for Goonpat, a coarse kind of hempen cloth, which is used in making sacks for the conveyance of grain and other articles by pack carriage. The material forms a large portion of the housings, &c. of elephants and camels. Money bags and screens are also made of it, and combining the advantages of durability and cheapness, the stuff is considerably used among the lower classes of the people.

Mode of Preparation.—The fine fibres of hemp, after being well washed with water, are beaten, then twisted, and formed into twine, which, after being dyed (if necessary), is woven into a Goonpat web, which is generally from 6 to 8 inches wide, and 28 or 30 feet long.

The cost is as follows:—

| | |
|----------------------------------------------------------------------------------------|-----------|
| Hemp, about 7½ seers, price | Rs. 0 8 0 |
| • Wages of 1 man, employed for 4 days in making thread, at 1½ anna per diem | 0 5 0 |
| Ditto of 2 men, employed in weaving Goonpat for 2 days, at 1½ anna each per diem | 0 5 0 |
| Total | Rs. 1 2 0 |

A Goonpat web is worth from 1 rupee to 1 rupee and 8 annas.

Generally the manufacturer works himself, and thus receives the price of labour. Goonpats manufactured in Sunkeshwur are sold for from 11 to 14 annas, and those at Rajapore from 15 to 17 annas each; both kinds are, however, of an inferior quality.

About 500 Goonpats of the best quality are woven throughout the Kolhapoor State, at the cost of Rs. 562-8-0; they are sold at 1 rupee 12 annas each, making in the aggregate Rs. 875, leaving Rs. 312-8-0 as profit to the manufacturer.

About 200 of a superior and 300 of an inferior kind of Goonpats are imported into the Kolhapoor territory from Rajapore and Sunkeshwur; the value of the former is 1 rupee 4 annas, and they are sold at 1 rupee 6 annas each; the value of the latter is 12 annas, and they are sold at 14 annas each, leaving aggregate profits of Rs. 25 and Rs. 37-8-0 respectively to the manufacturer.

COTTON THREAD.—The country cotton thread finds a ready market in the Kolhapoor territory, being used in weaving coarse cloths, in sewing, &c.

Mode of Preparation.—A quantity of cotton, weighing about 25 tolas, is taken, and, after separating the seeds, is carded and spun into thread by means of a spindle. On the completion of about 20 or 25 hanks, each about 1,000 feet in length, the ends of the threads are joined together, and a roll called Cheewut is made. The hank is sold at the rate of three per pice, and each Cheewut at from $1\frac{1}{2}$ anna to 3 annas.

The number of rolls of cotton thread manufactured throughout the Kolhapoor State is about 13,000,000, and their value is estimated at Rs. 2,00,000. They are sold for Rs. 2,12,500, leaving a profit of Rs. 12,500 to the manufacturers, who are generally the wives of the cultivators.

POTTERY.—The materials required by potters are as follow:—

A wheel of the shape shown, of the value of about 1 rupee; three pieces of wood, either of Babool or Khair, 4 inches in length, and in breadth 4, 3, and 2 inches respectively, each valued at 9 pies; a piece of stone 4 inches long, 2 inches broad, and having a handle let in; a stick 7 feet long, for turning the wheel; 13 pukka seers of black clay; 13 pukka seers of dry dust from ground well trodden by cattle; $6\frac{1}{2}$ pukka seers of horse-dung.

The clay and horse-dung are mixed together in water. At first the mixture is kneaded with the hands, and afterwards trodden with the feet. This is done twice, and the process takes two hours. The prepared clay is sufficient for the production of the following articles:—

20 water-pots called Ghagur.

40 smaller pots (Ghura).

6 larger water pots called Dera, each holding water sufficient to fill four Ghagurs.

100 Cheelums (the part of the Hooka holding the fire).

- 50 small drinking vessels, called Mogay.
- 100 dishes or coverings for pots.
- 50 very small pots, called Boodooklees.
- 10 cooking pots (Koondaley or Mandan).
- 40 Puruls, or shallow dishes.
- 100 small open drinking vessels, called Jams.

The potter's wheel is formed as follows :—

A flat piece of wood is cut into a circular form of about 8 inches in diameter, and a small flat circular stone, having a hollow in the middle, is fixed in the centre ; six thin sticks are inserted as spokes on the piece of wood, which serves as the nave. Afterwards three hoops are tied on the extremities of the spokes, with a thin kind of rope made of a variety of grass (*Saccharum manja*), and the circumference of the wheel is loaded with a mixture of clay and goat-hair to make it heavy. A stout wooden peg is buried, leaving three-fourths of a foot above ground. A pit is filled with water, and the wheel is placed on the peg, which rests in the hollow of the stone fixed in the nave. The potter then places a quantity of mud on the wooden nave, and turning the wheel by means of a stick fixed in a hole made for the purpose in the circumference, obtains a sufficient rapidity of motion. A piece of wet cloth is then taken in the fingers of the operator, and the required form is given to the mud, which is moistened with water during the operation. By continual manipulation, turning, and applying fresh mud, the pot is both enlarged and strengthened, and the requisite finish of shape is given. The pots are then dried, a solution of red earth in water is applied externally, and a string of smooth Kenjka seeds besmeared with oil is rubbed over to polish the outside. The pots are then baked in a kiln filled with rubbish. At the bottom of the kiln a quantity of rice husk is spread, and the pots are imbedded in regular rows among the husk, which is also plentifully heaped over the pottery. The kiln is set on fire from the bottom in the evening. By about 4 A. M. the next morning the whole kiln is on fire, and after the rubbish and husk are consumed the pots are taken out.

The price of these articles is as follows :—

Ghagur, 1 pice each.

Ghura, 2 per pice.

Dera, 5 pice each.

Cheelums, 5 or 6 per pice.

Mogay, 5 per pice.

Coverings for pots, 6 for a pice.

Small Boodkooles, 5 or 6 per pice.

Koondaley or Mandan, 1 for a pice.

Puruls, 3 per pice.

Jams, 6 per pice.

The Mode of making Tiles.—Five bullock-loads of clay, five head-loads of horse-dung, and two head-loads of kiln ashes, are mixed together, in water, and reduced to thick mud. One man prepares the mud, another gives the requisite quantity to be placed on the wheel, and the third turns the wheel, and prepares the tiles in the shape of a hollow cylinder, tapering towards one end. These cylinders are about 7 or 8 inches in length, and about 3 inches in diameter.

While wet, two cuts are made with a piece of stone or wood on each side of the cylinder, leaving it, however, joined together on the upper and lower ends. When dry, a solution of red earth is applied, and the cylinders are baked in the kiln. Baked cylinders are sold at the rate of 500 for a rupee. The purchaser divides them into two parts longitudinally at the time they are used. Tiles are sold at 1 rupee per 1,000. Three men make 400 cylinders, or 800 tiles, in a day.

There are other kinds of tiles, which are made in the following manner :—

Mud similar to the above is prepared, but with a greater portion of ashes. A quantity of the mixture is then placed over a mould, an oblong piece of wood, having its upper side convex, and tapering towards the end; the mud is applied by the hand according to the length required, and the mould is then withdrawn, leaving a tile on the ground.

After the tiles are made in this way, they are baked in the usual manner.

These tiles are sold at the rate of 1,000 per rupee and a quarter.

Eight annas' worth of rubbish is required to burn 1,000 tiles, whether they are large or small. The potters are all Hindoos.

The following detailed statement contains the number and value of the pottery manufactured, together with profit left to the manufacturer :—

Pottery.

| | | | | |
|--------------------------------|-----|--------|---|---|
| 4,995,000 pots, worth | Rs. | 99,900 | 0 | 0 |

GLASS BRACELETS.—The custom of wearing glass bracelets is observed from the time a female child arrives at the age of three or four years. The bracelet, called Kakun, is one of the three signs of the married state of a

Hindoo woman, and is not worn after the demise of the husband. In Guzerat and the Upper Provinces bracelets of ivory are used, but in the Deccan glass is preferred.

The poorer classes in general cannot afford to purchase the glass bracelets imported from China, which, from their comparative cost, are more in demand among the wealthier part of the community. At the time of the marriage ceremony, however, the country-made glass bracelets are invariably put on the bride among all classes, however rich the parties may be.

There is a great consumption of these country-made bracelets, and the mode of making them as practised in Kolhapoor is as follows :—

The manufacturers procure large pieces of green and blue glass from a village called Godgiree, near Belgaum, where they are said to be imported from foreign ports beyond Bombay.

Blue glass fetches from Rs. 2-8-0 to Rs. 4 per maund; green glass is sold at the rate of Rs. 2-8-0 per maund, and broken pieces of glass bracelets, if available, are also procured.

The large blocks of glass are first exposed to heat, and water is then poured over to reduce them to small pieces, which are then placed on five small earthen dishes over the mouth of a circular furnace divided into compartments, and heat is applied from the inside of the furnace. A large cover is placed over the dishes, leaving openings at each dish.

After the heat has been continued for about six hours, the glass commences to melt, and the working man sits with his face towards the furnace, on a cumblee, or any other non-conductor of heat. He dips the point of a stick in the melted glass in the purl or dish before him; the stick is then turned round with both hands, when the glass forms into a small ball; the stick is then placed on a cross stone, and the man continues to beat the ball gently with a flat piece of wood until it assumes a perfectly round shape. A gentle blow is then given to the stick, which penetrates the ball, and makes the ring, which is enlarged by inserting a flat piece of wood. The ring is then transferred to an earthen mould, and is turned round to the requisite size by means of an iron spindle which is fixed in it.

The operation must be performed with great expedition, and when the entire mould is covered with bracelets they are removed.

Ten men thus employed melt and make bracelets of 1½ maund* of glass in a day. The bracelets weigh 1 maund and 3 seers, 1 seer of glass being wasted in the preparation.

These bracelets, at the rate of Rs. 6 per maund, fetch Rs. 7-2-0.

* This is a maund different from the common one: brass, copper, and other metal utensils are bought and sold with this maund in this part of the country. It is composed as follows :—

80 rupees weight = 1 seer.
16 seers = 1 maund:

Costs.

| | | | | | |
|--------------------------------------------------------------------------------------------------------|-------|----|---|---|---|
| 1½ maund of glass, at the rate of Rs. 4 per maund | ..Rs. | 5 | 0 | 0 | |
| Average daily expenses, including the wages of 10 men at 2 annas each, wear and tear of the tools, &c. | .. | .. | 1 | 8 | 6 |
| Total.. | ..Rs. | 6 | 8 | 6 | |

Leaving 9 annas and 6 pies as net profit.

The entire quantity manufactured is estimated to cost Rs. 1,254-8-0, the receipts Rs. 1,800, and the profits, after paying all expenses, Rs. 545-8-0.

LAC BRACELETS.—Lac is imported into Kolhapoor from the Konkun and the Carnatic. It is sold at from Rs. 4 to Rs. 4-8-0 per maund. This lac is commonly known by the name of Karee lac, and is obtained from the spice grass (*Andropogon Schænanthus*), and the trees *Hibiscus populneordealis* and *Zizyphus jujuba*.

Karee lac is deprived of its natural dirty reddish colour in the following manner. A quarter of a seer of lac is reduced to fine powder, and mixed with water. To this is added successively 1 ounce of carbonate of soda, and a similar quantity of the paste of the bark of the tree *Morinda citrifolia*. The whole is then boiled in a seer weight of water, and the water, on being boiled down to three-fourths of a seer, is poured out into another vessel, leaving a deposit of lac, which is called Bhakuree (cake) lac.

Ready made cakes of lac are also obtained from Hooblee, in the Dharwar Zilla, and are sold at from Rs. 2-8-0 to Rs. 3 per maund.

The smaller particles of the Karee lac are kept in water for one night. The next morning the lac is well shaken, and after the water has been poured out, is dried in the sun, and the impurities removed. In this stage the lac is called Daney (grain) lac. It is then put in a cloth bag, secured at both ends. This bag is held by two men about two inches from a fire. The lac then melts, and when it commences to ooze out is scraped off the outer surface of the bag with the blade of a knife, and collected into a vessel, and the lac thus obtained is called the Chopree lac. About one-fourth of the lac is wasted during this process.

Three quarters of a seer of the water which has been obtained from the process of making Bhakuree lac is then taken, and a mixture of 2 ounces of alum, and a similar quantity of water is poured into it. The whole is allowed to remain undisturbed for about six minutes, when it attains consistency. The mixture is then tied in a double cloth, and hung up for one night, during which time all the water oozes out, leaving a thick colouring matter in the cloth.

Mode of preparing Red Lac.—A quantity of the Chopree lac is heated and fastened to one end of a stick; another stick of the same size is made use of to render it smooth. This is done by stirring up the lac while hot at the top of one stick with the other stick, and while the lac is hot a portion of the colouring matter above alluded to is mixed with it, and the whole is then kneaded

between two pieces of stone. This process is continued until an equal quantity of the colouring matter is mixed throughout the lac.

Yellow Lac.—Yellow lac is prepared by beating together on a piece of stone Chopree lac with double its weight of yellow orpiment. A further quantity of Chopree lac, equal in weight to the first portion, is put into the mixture, and the whole is then heated.

Blue Lac.—Blue lac is prepared in the manner just now described, by the addition of indigo instead of yellow orpiment.

Green Lac.—Green lac is obtained by mixing Chopree lac successively with yellow lac and indigo, in proportionate weights of 40, 10, and 2 ounces.

Yellow Shining Lac.—Yellow shining lac is prepared by heating together Chopree lac, Chore Hulud (a kind of turmeric), and Hiradeekun (a sort of sticky juice), in proportionate weights of 10, 5, and 1.

Green Shining Lac.—Green shining lac is obtained by melting the powder of green lac, Chore Hulud, and Chopree lac, in the proportionate weights of 1, $\frac{3}{4}$, and 8.

Hingolee Lac.—Hingolee lac, or lac of the colour of vermillion, is obtained by combining Chopree lac and vermillion in the proportionate weights of 80 and 12.

Mode of Colouring the Tin or Tin Leaves used in the Manufacture of Lac Bracelets.—Tin leaves are imported into Kolhapoor from Poona and Satara, and are sold at the rate of Rs. 1-12-0 per seer of eighty rupees in weight.

A fire is prepared, and a flat piece of earthen pot or iron is placed over it, and after it has become a little hot a leaf of tin is placed on it. Yellow shining, green shining, or red lac, according to the colour required, is taken and tied in a piece of cloth, and the bundle is applied to the hot piece of earthen pot or iron on the fire, and then rubbed over the tin plate.

Mode of making Lac Bracelets.—Bhakuree lac is reduced to small particles, and dried by exposure to the sun for about three hours. A quantity of powder of baked bricks or tiles is put on an iron plate having fire under it, and after it has been heated, the lac is put into the plate, and the whole is then stirred with a wooden ladle, when a combination of the two substances is effected. The compound is then removed from the fire, and again stirred up briskly while it is hot, and made into sticks of the thickness of a forefinger, and about $2\frac{1}{2}$ feet in length.

These sticks are coloured by a coating, while hot, of coloured lac. The sticks are then heated, and lengthened to the required size, by being placed, while hot, on a stone, and briskly turned round under a flat piece of wood. These sticks are then cut into pieces of one span in length, and, when hot, bent into the shape of a ring, both the ends being joined together. These rings are subsequently put on a piece of wood moulded in the shape of an arm, and rendered smooth and even, and then removed.

Patlees (flat bangles) are made by forcing this heated lac into a wooden mould of the desired shape, and the bangles are then placed on a piece of wood

moulded in the shape of an arm, and pieces of the tin leaf, of the required colour, are stuck on the surface, and rendered even by rubbing with a knife. Different figures are afterwards impressed by means of moulds.

Mode of preparing Liquids giving Silver and Golden Hues.—*Silver Hue.*—Tin leaf and a quantity of glue of half the weight of the leaf are beaten by two men on a stone for about six hours. On amalgamation, the mass is put into very hot water, when it crumbles into small particles. The water is then poured out into another vessel: if any sand or other rubbish is left behind, more water is added, and well stirred, and then transferred to another vessel. This is repeated eight or ten times, until the sand is discharged. The water, after having been heated to a boiling-point, is kept covered for one night. The next morning the colour is found deposited at the bottom of the vessel, when the water at the surface is gently poured off. A small quantity of solution of glue is mixed with the colour, and stirred up, and the result is the silver solution.

Gold Solution.—Gum myrrh is boiled in oil in the proportion of 40 to 48. The liquid is then strained through a piece of cloth, the sediment being thrown out, and the red oil placed aside. An earthen pot, having also a coating of earth at the bottom, and the mouth hermetically closed, is put on a fire, and when it becomes red hot the mouth is opened, and pieces of gum animi, equal in quantity to the myrrh, are introduced. The whole mass is then stirred with an iron instrument, and the mouth of the pot again closed. It is again heated, and the stirring and heating repeated three or four times, when the gum animi is reduced to a liquid state. The pot is removed from the fire, and the red oil mentioned above poured into it. The pot is again put over the fire, and the contents stirred up. The oil and gum animi then combine and form a sticky substance. The pot is removed, and the liquid strained through a cloth into another vessel becomes the required gold-coloured solution.

The silver colour is applied with brushes to the bracelets, which, after having been dried in the sun, are placed on a piece of wood, and strings of glass beads are rubbed over them, which renders them bright and smooth.

The gold colour is then applied to these bracelets with the fingers, and they are placed in the sun for three successive days.

Price of Materials.

| | | | | | |
|-------------------------------------|----|----|----|----|-----------|
| Bhakuree lac, 1 maund | .. | .. | .. | .. | Rs. 3 0 0 |
| Chopree lac, 2 seers | .. | .. | .. | .. | 1 0 0 |
| Yellow orpiment, weighing 20 rupees | .. | .. | .. | .. | 0 3 6 |
| Tin, weighing 60 rupees | .. | .. | .. | .. | 0 12 0 |
| Wages for working tin | .. | .. | .. | .. | 0 12 0 |
| Glue, one-fourth of a seer | .. | .. | .. | .. | 0 3 0 |
| Golden varnish | .. | .. | .. | .. | 1 0 0 |
| Charcoal | .. | .. | .. | .. | 0 8 0 |

| | | | | |
|--------------------------------------------------------------|--------|----|----|---|
| Wages for guarding the bracelets while drying in the jungle. | Rs. | 0 | 3 | 0 |
| Paper for covering the bracelets | *.. .. | 0 | 2 | 6 |
| Wages of the workman for making bracelets | | 2 | 13 | 0 |
| Total.. .. | Rs. | 10 | 9 | 0 |

2,250 bracelets are manufactured from 1 maund of lac, and the manufacturers sell the bracelets in retail, at the rate of four per pice, or 1,000 for Rs. 5. A sum of Rs. 11-4-0 is thus realized, leaving a net profit, after paying the expenses, of 11 annas to the manufacturer, or seven per cent. on each maund of manufacture. Total of maunds manufactured, estimated at about 300, valued at Rs. 2,000, and the expense amounting to Rs. 1,837, would leave a profit of Rs. 163 to the manufacturers.

CHARCOAL.—Charcoal is made by burning the wood^o of the following trees, viz :—

- | | |
|-------------|-----------------|
| 1. Khair. | 6. Jamblee. |
| 2. Bawa. | 7. Anjeen. |
| 3. Kinjlee. | 8. Dhaunin. |
| 4. Woombee. | 9. Jumboovunee. |
| 5. Hurka. | |

A square pit about 2 feet deep is first excavated, and small pieces of dry wood are spread at the bottom. Large green faggots from any of the trees above-mentioned are then stacked to fill the pit, the dry pieces at the bottom are set fire to, and the whole allowed to burn until the upper layer of wood has become thoroughly ignited, when smaller faggots of the same description of wood are added to the heap, and the coals which roll down are collected together on the top of the stack by means of a pole, called a Lug, by the Dhawars. As soon as the entire mass is sufficiently ignited, a portion of dry earth is thrown over it; it is allowed to remain in this state during the night, and on the following morning the smouldering remnants are taken out of the pit with a pole, called a Rusole, by the Dhawars, and the fire is completely extinguished by rolling here and there on the ground the charred wood, which is then stored up as charcoal.

In order to prepare 4 maunds of charcoal, the labour of two men is required for a period of twenty-four hours. The wood is cut during the entire day, and in the evening the faggots are placed in a hole dug in the earth. The heap of wood is burned during the night, and one man constantly keeps watch, in order to prevent the wind from disturbing the operation, which is completed at 6 A. M. on the following day, and the prepared charcoal is then taken to Kolhapoor or Punala for sale. The rate of wages paid to labourers working for the twenty-four hours is 3 annas per man, so that the actual cost of 4 maunds of charcoal is only 6 annas, and for a candy 1 rupee and 4 annas, but the article when brought to Kolhapoor fetches about Rs. 4 per candy, and at Punala Rs. 2-8-0.

About 150 candies of charcoal are made in the State, valued at Rs. 625, and the expense, amounting to Rs. 475, would leave a profit of Rs. 150 to the Dhawars.

LEATHER.—Raw hides are purchased by the Dhores or tanners, from the Mahars, at from 8 annas to 1 rupee per hide, for the purpose of being tanned.

The process is as follows :—The hide is at first macerated in lime and water for about twenty days, to induce a separation of the hair, the fat, and the fleshy parts: after it is well soaked, the Sip, a kind of scrape, is used to scrape off the hair, and the Rapa is applied to remove the fat and fleshy substance. The hide is then washed in a running stream, and immersed for three days in a solution composed of three parts of Babool bark, and four parts of Hurdee (the fruit of the *Chilbula myrobolans*). This process is repeated twice.

The hide is afterwards fastened together, and made into a bag, and hung up, filled with a stronger solution made as above, and left in the sun for three or four days. After this, it is again washed with clean water, and dried, and is then ready for the market, where it fetches from 1 to 2 rupees.

About 77,000 raw hides are purchased from the Mahars, and estimated as bearing a value of Rs. 57,500, and the number of skins of leather sold to the shoemakers and saddle-makers amounts to 25,500, bearing a value of Rs. 40,242, and leaving a profit to the tanner of Rs. 8,984.

One hide produces 8 pairs of shoes, sold at Rs. 6, and the entire number made of 200,000, together with 6,000 imported, would afford an annual supply to 154,375 inhabitants, who necessarily require them.

IRON.—Iron ore is found at the following places in the Kolhapoor territory :—

- | | |
|----------------------------|--------------------|
| 1. Punala. | 6. Munolee. |
| 2. Mcerkoota. | 7. Kotolee. |
| 3. Aenee, Peta Bhoodurgur. | 8. Joteeba's Hill. |
| 4. Toomzaee Hill. | 9. Pawunghur. |
| 5. Oodgiree. | |

The ore is dug from the pits with crow-bars and pick-axes; the large pieces are broken by means of a hammer, and then subjected to the action of fire. When cold, they become brittle, and are pulverized on a slab of hard stone, and the powder thus prepared is then fit for being put into the furnace.

The best variety of the iron ore is called Borgale, the second Jheelga, and the third Totha.

The preparation of the tube called Moos appears to be one of the most difficult parts of the process. For this purpose, a quantity of flints is first submitted to the fire, and, to prevent accident, large stones are kept covering the pieces of flint to preserve the workmen from the fragments, which are apt to fly with considerable force from the fire. It is then reduced to an impalpable powder, and mixed up with fine clay and water. When sufficiently kneaded, and pliable, the mixture is made into a ball, and a round stick 16

inches in length, and about $1\frac{1}{4}$ inch in diameter, is put into the mass, which is worked with the hands to form a uniform coating on the stick. It is then exposed to the sun, and when dry the stick is removed, and over the tube thus formed a further layer of bits of flint and clay is added, and the tube is again dried.

For the furnace, a round hole is excavated in the ground, about 3 feet deep, and $1\frac{1}{4}$ foot in diameter. One side is at first kept open, and the remaining sides are lined with a mixture of moist clay, and powdered flint, or iron ore. A circle is then made at the bottom, about 6 inches high, of powdered charcoal, mixed with water, and about 4 seers of small charcoal are next put in. The Moos or tube described above is now adjusted in a standing position from the open side of the furnace, so as to have one of its extremities in the centre of the hole. The open side is then closed up, lined in the same way as the rest of the furnace, and a sufficiency of charcoal is added to fill half the furnace. The noses of two large bellows are then adjusted in the outer end of the Moos, and the open space which is allowed to remain above the junction with the upper end of the Moos enables the workmen to see if any matter has been accumulating likely to obstruct the free passage of air. A ball of clay is kept in this open space, and is removed when required.

When all the above arrangements are finished, two men commence working the bellows, the duty of one being simply to labour at the bellows, and the other, in addition to blowing, feeds the furnace with charcoal and powdered ore in proper quantities, and at proper intervals. Beside this man is placed a maund of charcoal, a pylee of the powdered ore, and a long handled iron spoon to serve it out. He first puts a handful of ore into the furnace, and then fills up to the top with charcoal. Both the men set to work steadily at the bellows, and in the course of a short time an intense heat is produced, by which a fusion of the ore takes place without the intervention of any chemical substance. Powdered ore and charcoal are again and again added, and a continued blast is steadily kept up from the bellows, until the heap of ore is expended. Experience and skill are both required on the part of the workman to whom is assigned the task of feeding the furnace, to apply the materials, and to ascertain the moment of fusion. The miners, however, state that as long as the flame is of a reddish colour the ore is not reduced, and a white flame, on the other hand, indicates fusion to have taken place. The ball of metal which is at last formed at the bottom of the furnace is called, by the Dhawars of Kolhapoor, Mudga, and generally weighs from one-fourth to one-half of a maund. The time taken during the process is about three hours, and a maund of charcoal and a pylee or three-fourths of a maund of powdered ore are consumed in the production. The metal is allowed to cool gradually of itself, no water being thrown on it, and is eventually taken out of the furnace with a pair of pincers.

The hole excavated for the furnace serves for two or three occasions, but on each succeeding one it is necessary to line it throughout afresh, and to

make all the arrangements above described ; and although the preparation of the Moos is tedious, the brittle tube never lasts for more than two operations.

The iron is afterwards well hammered, and it is then ready for being made into the different articles which are commonly manufactured in this part of the country.

Besides the two men who work at the bellows, there are two other labourers employed in supplying charcoal and water, and in repairing the furnace in the event of its accidentally giving way, and two men are further engaged in procuring and bringing wood from the jungle for charcoal, and the ore from the pits. Altogether one furnace gives full employment to six men.

The iron prepared by the Dhawars sells at the rate of from 1 rupee to 1 rupee and 4 annas per maund.

There are about 180 men in the Kolhapoor territory who follow this profession, and there would appear to be an ample field for double the present number.

The number of furnaces at present working in the Kolhapoor territory are stated to be 30, producing annually 225 tons of metal, valued at Rs. 9,000, and the expense amounting to Rs. 6,300, would leave a profit of Rs. 2,700 to the miners.

MISCELLANEOUS MANUFACTURES.—SWEETMEATS.—The confectionery prepared and sold in Kolhapoor is of an inferior quality to that prepared in Bombay, Poona, and other rich towns. The number of shops is limited, and the chief demand exists in the palace, and residences of the Mankurees.

The sweetmeats prepared and usually exposed for sale by the Kolhapoor confectioners are comprised under the following items :—

| | |
|--------------------|--------------------|
| Pedhas. | Sugared cardamoms. |
| Burphee. | Butasa. |
| Sugared gram. | Revdee, &c. |
| Ditto cashew-nuts. | |

Pedhas are made of milk, and the following is the process of preparation :—

A large iron pan, made for the purpose, and containing a small quantity of milk, is placed over a fire-place. The fire-place is made of either bricks or stones, which are well plastered with mud. As soon as the milk is sufficiently boiled, it is stirred with a wide-mouthed iron ladle, called *Kultha* or *Dowla*, until it becomes thick, and is formed into a mass, which is called *Khuwa*.

The *Khuwa* is also sold ready made by the *Gowlees* to the confectioners, who prefer buying to the great trouble and care necessary in preparing the article, which from any excessive heat is apt to spoil.

Another wide basin is then placed over the hearth, and heated, when the *Khuwa* is sprinkled over the pan in small particles, to extract the contained ghee, and when quite dry the requisite quantity of sugar, with cardamoms and sugar-candy, is mixed. Balls of the size of about an inch in diameter are then formed, and flattened on both the sides, and these are called *Pedhas*.

Burphee.—Kolhapoor Burphee is prepared as follows :—

Fresh kernels of cocoanuts are scraped with an instrument called *Kisnee* or *Khuonee*, and exposed in the sun until the substance be partially dried. A requisite supply of white sugar is next put into a basin, together with some water, and boiled until the mixture becomes thick; and this preparation is called *Punkh*. The cocoanut scrapings are then poured into it, with cardamoms and other spices, and the mixture is allowed to collect into a mass, when it is removed from the hearth, deposited in dishes, and flattened into thick cakes, which are afterwards cut into small square pieces, and piled one above another when exposed for sale.

The process of preparing *Sugared Gram*, *Cashew-nuts*, and *Cardamoms*, is extremely simple. Clarified sugar is put into a basin, with a small quantity of water, and the mixture is boiled until it becomes a thick syrup, when a supply of any of the above-mentioned articles is added, and well stirred about with a stick. It is then removed from the basin, and spread on a mat to dry.

Butasa.—For the preparation of *Butasa*, sugar of superior quality is clarified, and put into a basin with a portion of water sufficiently boiled. The basin is then removed from the hearth, and placed over a fire to keep the syrup simmering. The liquid is afterwards beaten with sticks made for the purpose, and becomes by this process filled with air bubbles. It is then allowed to drop over a white cloth spread in the open air, and the pieces remain until they are cool, when they are removed from the cloth, and placed in small baskets. The *Butasa* is round, and hollow inside.

The *Revdee* is prepared without much trouble. A syrup of either sugar or molasses is made in the usual way, and a sufficient quantity of *Sesamum* seed is added. When the mixture has become thick, it is removed from the fire, and allowed to cool, when it is taken in small quantities, and balls are made of the size of a betelnut. The balls are then pressed with the hand, and flattened, and the article, under the name of *Revdee*, is thus ready for market.

The following table shows the names of various confections prepared in Kolhapoor, together with the names of the materials required, their actual cost, rate of sale, and the average profit derived therefrom by shopkeepers, &c. &c. :—

| Number. | Names of Confections. | Substance required for the preparation of each Confection. | Amount of actual Cost. | Rate of Sale. | Average Profit. | How many of each sort weigh in a Seer. |
|---------|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|---------------|-----------------|----------------------------------------|
| | | <i>Per Kucha Seer.</i> | <i>Rs.</i> | <i>Rs.</i> | <i>Rs.</i> | |

| 7 | Revdee | Sesamum seed | 1½ | 2 | ½ | ,, 110. |
| | | Sugar or molasses | | | | |

DATWUN OR DENTIFRICE.—Tooth-powder is used to a great extent in Kolhapoor, and particularly by females.

The article made in Kolhapoor is of two sorts, superior and common. The former fetches a high price, and finds purchasers only among the wealthier classes, while the latter, which is prepared of no very costly materials, can be purchased at a comparatively cheap rate.

The articles required for the preparation of the superior sort of tooth-powder are the following:—

| | |
|------------|-------------------|
| Cloves. | Gall-nut. |
| Nutmegs. | Sulphate of iron. |
| Morehood. | Wild myrobolam. |
| Cardamoms. | Lochun. |
| Mace. | |

Those required for the common kind are—

| | |
|-----------|-------------------|
| Gall-nut. | Lochun. |
| Morehood. | Sulphate of iron. |

These ingredients are separately ground into coarse powder, and then mixed together and well pounded, great care being taken, in the best sort of Datwun, to make the powder as fine as possible.

OIL OF FRANKINCENSE, OR OLIBANUM.—The oil obtained from olibanum is considered to be of a very stimulating nature, and is used for anointing the person. It possesses a very powerful perfume, and is of a deep red colour. It is also used by females, who apply it to their hair, under the impression that it renders it soft and glossy. The inhabitants of Kolhapoor consume a large quantity in their families, and generally manufacture the article in their private houses.

The materials required are, olibanum of superior quality, called Lohbundee, or Kuvdia, and Ral, a species of resin, believed to be obtained from the Deodar, a kind of pine; and the process is as follows:—

The ingredients, which are procurable in every shop, are coarsely pulverized, and placed in a new earthen pot, having a small mouth. The mouth is covered with a flat piece of potsherd secured with cloth, and rendered air-tight, by applying a thick layer of clay, a small hole being left on one side of the earthen pot, in which a pipe is inserted. The pot is then placed over a moderate fire, and a metallic cup, or other wide-mouthed basin is deposited under the pipe, and the olibanum and Ral, on melting, pour out the essential oil through the pipe into the cup. The essence is then mixed and rubbed up with either Til, or cocoanut oil, and the preparation is the Oodel oil, which is sold by the shopkeepers at 1 tola weight per pice.

COUNTRY INK.—The manufacturers of country ink are denominated Ruktwans, and although from the nature of the manufacture the profession of preparing and selling ink has been considered one of the lowest, very little aversion is displayed to it in Kolhapoor, and the Bramins even often engage in the trade.

Ink is made from various kinds of grain, particularly Nachnee, Bajree, and coarse rice, and the process of manufacture is as follows:—

A certain number of seers of any of the above grains are put into an earthen pot, which is placed on a hearth, and heated. One man is then engaged in turning the grain up and down with a wooden stick. As soon as the grain is sufficiently baked, a supply of water is added, and the mixture is kept on the fire for half an hour, after which the water assumes a brown colour, when the pot is removed. This raw ink is called Sheera, and as it costs very little, is used by children in writing exercises.

A quantity of lamp-black is put into a thin cloth closed at the end. The raw ink is then poured into a wide-mouthed dish, and the bundle is moved about, and rubbed against the bottom of the dish, until the entire quantity of the lamp-black dissolves, and the ink assumes the proper black hue, when it is poured into bottles, and sold either by wholesale or retail.

LAMP-BLACK.—A quantity of oil is put into a basin made for the purpose, and placed on the floor in a dark room, where the wind is excluded. Around this basin stones are arranged in a triangular form, similar to the Choola of the traveller, and a brass dish called Pitlee is placed over the stones, with some water in it. The lamp is then kindled, and kept in that state until the supply of oil in the basin is entirely consumed, and the lamp is extinguished. The dish is then removed, and the lamp-black, which is a very light powder, carefully scraped off the bottom of the Pitlee with a stick of a cocoanut leaf, and secured in paper.

Grain and oil, costing in the aggregate 4 annas, will produce about three bottles

of ink. Each bottle is sold for about 2 annas, which would give 6 annas as the total price of three bottles, thus leaving for the manufacturer a sum of 2 annas for his profit on the transaction.

VESSELS &C. MADE OF CAST METAL.—Worn-out brass and copper utensils, or broken pieces of the same, are used in making metal vessels. Brass utensils and fragments are sold at the rate of 10 annas, and copper at 1 rupee per pukka seer of 80 Company's rupees.

Zinc, which is obtained from Bombay, sells at Rs. 3-8-0 per maund of 16 seers of the above description.

Brass is prepared by melting together 53 rupees weight of copper and 27 rupees weight of zinc.

Mode of Casting Drinking Vessels, and other Hollow Pots.—A mould of the pattern vessel required is made in the first instance of red earth, and after it has been dried is rendered smooth by being turned on the country lathe.

A coating of wax of the requisite thickness is next applied to the mould, which is afterwards removed, and a coating of wet earth is given all over the surface of the wax, leaving, however, a small hole in a convenient place on one side. The mould in this state is then put into the fire, and after a sufficient degree of heat has been communicated, the wax in the mould melts, and escapes through the hole. The mould is then removed from the fire, and the melted metal is poured in through the hole. When it has become cool the mould is broken, and the required vessel is obtained. The vessel is, however, rough, and is polished by being turned on a machine called Churuk, of the form shown below :—

A B is a thick stick buried in the ground ; C D is a cylindrical piece of wood, having an iron nail at one end, and resting on a crutch (E) at the other end of the cylinder ; the vessel G is attached by means of lac. The point (N) of the cylindrical piece C D rests on the stick A B, and the cylinder is turned by means of the rope L M.

The workman sits near his work, and applies the point of an iron instrument to the sides and other parts of the vessel.

OTHER SOLID ARTICLES.—In casting images and other solid bodies an earthen mould is not required. A wax mould of the form is prepared, and carefully covered all over with fine earth ; a hole, as in the former case, being kept open. The process already mentioned of extracting wax and pouring in metal is then observed. After the image is cast, it is polished by means of files and nails, but articles such as candle-sticks, &c. which admit of being turned, are rendered smooth on the turning machine.

FAIRS.—Besides the daily sales in every town and large village, there are five established periodical fairs at Nursoba's Waree, Kolhapoor, Joteeba's Hill, Singnapoor, and Temblae, at which may be had cloths of different descriptions, brass vessels, &c.

The following statement gives the details of the fair annually held at Nursoba's Waree, showing the number of shops, the amount and description of merchandize brought for sale, the estimated value of articles, &c. :—

| No. | Names of Articles. | No. of Shops of each description. | Value of Merchandize brought for Sale. | Estimated Value of the Articles Sold. | Balance. |
|-----|--------------------------------------|-----------------------------------|----------------------------------------|---------------------------------------|------------------|
| | | | <i>Rs. a. p.</i> | <i>Rs. a. p.</i> | <i>Rs. a. p.</i> |
| 1 | Cloth | 38 | 3,12,567 0 0 | 1,35,575 0 0 | 1,76,992 0 0 |
| 2 | Brass and copper pots | 30 | 24,597 0 0 | 13,181 0 0 | 11,413 0 0 |
| 3 | Munree, or haberdasher's articles .. | 14 | 809 0 0 | 427 8 0 | 381 8 0 |
| 4 | Glass bangles .. | 17 | 1,459 0 0 | 655 0 0 | 804 0 0 |
| 5 | Perfumery | 7 | 357 8 0 | 161 8 0 | 196 0 0 |
| 6 | Confectionery .. | 9 | 613 8 0 | 512 0 0 | 101 8 0 |
| 7 | Articles sold by Jingurs | 3 | 102 0 0 | 97 0 0 | 5 0 0 |
| 8 | Pearls | 13 | 33,445 0 0 | 5,439 0 0 | 28,006 0 0 |
| 9 | Grain of every kind .. | . | 3,000 0 0 | 2,000 0 0 | 1,000 0 0 |
| 10 | Vegetables, fruit, &c. . | .. | 1,000 0 0 | 700 0 0 | 300 0 0 |
| | Total | 131 | 3,77,950 0 0 | 1,58,751 0 0 | 2,19,199 0 0 |

The Government receipts on account of the market fees, exclusive of the duties on goods and tolls on the Ghauts, amount toRs. 58 12 3

Deduct—Amount paid to Hukdars, &c. as shown below :—

Share of the Hukdars, viz. the Patel and

Koolkurnee..Rs. 10 12 8

Ditto Naik5 6 4

Oil for the night guard, 1 maund1 8 0

17 11 0

Government net receiptsRs. 41 1 3

The number of people who visited the shrine during the whole month amounted to 46,646 souls; on the 5th, which is called Gopal Kala, and 14th, of Maghwud, no less than 15,000 individuals having come. The fair lasts for a whole month, but the greater number of shops and people continue only for about three weeks. Independent of the sum of Rs. 17-11-0 shown above, the following are the items of Government expenditure :—

| | | | |
|-------------------------------------------------------------------------------------------------------------------------|---------|---|-----|
| Amount of salaries, &c. of detachment of foot and horse, &c. stationed for the preservation of the public peace | Rs. 181 | 2 | 0 |
| Ditto of expense on account of food given to Bramins | 359 | 6 | 10* |

Total.. ..Rs. 540 8 10

Statement of Goods brought for Sale to the Fair held on the Joteebu's Dongur, in the month of Chytra, April-May 1852.

| No. | Names of Goods. | Value of Goods brought for sale. | | | Value of Goods sold. | | | Value of Goods carried back. | | |

The amount of Government fees depends on the number of shops, the following statement giving the average amount:—

Amount of proceeds of Government fees, taxes, &c. ..Rs. 316 15 9

Deduct amount paid to Dewusthan, Dhurma-

deo, Sundee sepoy, Ramoosees, &c. ..Rs. 152 7 9

Contingent charges 4 10 0

157 1 9

Total.. ..Rs. 159 14 0

Deduct on account of vexatious taxes which have been remitted 37 5 1

Leaving net proceeds for GovernmentRs. 122 8 11

Every means have been adopted in precautionary measures, and in providing for the security of persons and property, to encourage these fairs, but any impetus which may be given during one good season is liable to be neutralized during the succeeding one, through the ravages of epidemic diseases, which unfortunately are too apt to exhibit themselves, to the consternation and instant dispersion of the assemblage.

* This expense is defrayed out of the proceeds of the Inam land, yielding an annual sum of Rs. 150, and the allowance of Rs. 262-2-10 given from Mahaluinpoor.

On the 6th of February of each year a fair is held on the bank of the river Punchgunga, which ends on the 10th April. It is held in commemoration of the death of His Highness Shivajee I. of Kolhapoor, and commences with several ceremonies. Lights are exhibited, a palanquin is moved about, and fire-works are discharged on the river. From 1,500 to 4,000 Bramins are feasted. About 2,000 individuals assemble every day, until the fair is terminated.

On the last day of the month of January a fair is held near Singnapoor, which is about three miles from Kolhapoor. This fair lasts one day, and is called Vishalee fair, in honour of Vishal Tirth, a name given to the part of the Punchgunga adjoining Singnapoor. About 25,000 individuals assemble on this occasion.

CAPITAL EMPLOYED.—Possessing capabilities within her own boundaries to produce all the necessaries and all the usual luxuries required for Indian life, Kolhapoor has been long under the progressing efforts of a division of labour, though checked by constant wars and tyranny.

From ancient times, the alluvial plain has been set apart from the grassy eminence, the forest from the orchard land, and a mutual exchange of proceeds have somewhat benefited the respective tenants of each locality. In the absence, however, of any extended foreign commerce, or finer description of manufacture, and also of any individual costly requirement, the movement has not as yet progressed beyond that state of society where a mere maintenance is obtained by the lower classes, and where the superfluity of produce is wasted by the richer classes in providing for a host of idle dissipated retainers.

From the very simple and primitive nature of the machinery employed, and the premises used in country manufactures, a very limited capital is required.

The following statement exhibits the value of dead stock requisite in each of the principal manufactories, and the total amount invested under this item amounts, according to a rough calculation, to Rs. 3,11,671 :—

Cloth, &c. Weavers.

| | | | | | | | |
|---------------------------------------------------------------------|----|----|----|-----|----|----|---|
| 2 wooden poles, with lines fixed to them | .. | .. | .. | Rs. | 0 | 14 | 0 |
| 16 chips of bamboo | .. | .. | .. | .. | 0 | 3 | 0 |

| 1 piece of plank to smooth leather on | .. | .. | .. | .. | .. | .. | .. | 0 | 8 | 0 |
| 2 iron spikes to sew water bags of leather by.. | .. | .. | .. | .. | .. | .. | .. | 0 | 1 | 0 |
| 1 hone for whetting instruments | .. | .. | .. | .. | .. | .. | .. | 0 | 1 | 0 |
| Total.. | | | | | | | | Rs. | 1 | 3 0 |

A further sum of Rs. 11,87,071 is requisite, for the purchase of the raw material used, together with the item on account of wages; and thus altogether a sum of Rs. 14,98,742 is annually invested as capital employed in the manufacturing of the country.

It is a matter of fact that in Kolhapoor a portion only of 5 per cent. of the manufacturing body are men of any substance; the remainder borrow from the Sowkar, and make the best terms they can according to their talent and ability.

After paying the expense of labour, the assumed net profit of Rs. 1,80,345 would admit of a payment of nearly fifteen per cent. ; but it is very problematical whether the bankers are contented with this return ; and indeed they generally prefer extracting what they can, annually, on account, from the borrowing manufacturer.

Thus, although the mere means of maintenance are obtained on sufferance, the manufacturer, who is generally forced to be content with the market profit, allows himself to be dipped further in the Sowkar's books from year to year, on account of inordinate accumulating interest, and he can never hope to emerge from the condition of the hard-tasked journeyman.

The following statement exhibits the value of dead-stock requisite in the principal artizan occupations, and the total sum invested under this item amounts to Rs. 2,33,959 :—

Confectioners.

| | | | | |
|------------------------------------------------|-----|-----|----|---|
| 3 pans to refine sugar.. .. | Rs. | 45 | 0 | 0 |
| 3 copper ladles for making sugar cakes | | 6 | 0 | 0 |
| 2 perforated ladles | | 1 | 8 | 0 |

WEIGHTS AND MEASURES.—No uniform standard of weights and measures existed in Kolhapoor until the year 1847.

In every village, and in every individual shop, the retail dealer manufactured, according to his ideas of honesty, his own weights and measures, from any material at hand, and used them without restraint, to his own profit, and to the disadvantage of all who dealt with him.

The following statement shows the new standard of weights and measures introduced into the Kolhapoor territory, in supersession of those which had been authorised by old custom :—

Weights.

The Tola is equal to the weight of a Company's rupee.

| | | |
|-------------|---|-----------------------------------|
| 20 Tolas | = | $\frac{1}{2}$ Seer. |
| 40 Ditto | = | $\frac{1}{2}$ Do. |
| 80 Ditto | = | 1 Do. |
| 160 Ditto | = | 2 Do. |
| 400 Ditto | = | 5 Do. |
| 800 Ditto | = | 1 Dhuda, or 10 seers. |
| 1600 Ditto | = | $\frac{1}{2}$ Maund, or 2 Dhudas. |
| 3,200 Ditto | = | 1 Maund. |
| 20 Maunds | = | 1 Candy. |

Measures of Capacity.

A measure which holds twenty-five Company's rupees weight of equal parts of the following grain, viz. 1, Hurbura or gram, 2, Guhoo or wheat, 3, Moog, 4, Woodid, 5, Koolthee, 6, Toor, 7, Sajgoora, 8, Bhat, and 9, Jondla, is equal to $\frac{1}{2}$ Seer.

| | | |
|---------------------|---|-----------------------|
| 50 Company's rupees | = | $\frac{1}{2}$ Do. |
| 100 Ditto | = | 1 Do. |
| 200 Ditto | = | 2 Do. or one Udholee. |
| 2 Udholees | = | 1 Pylee, or 1 Chitee. |
| 16 Pylees | = | 1 Maund. |
| 20 Maunds | = | 1 Candy. |

Liquid Measure.

A measure which holds twenty Company's rupees weight of pure water, is equal to $\frac{1}{4}$ Seer.

| | | | | |
|-------|------------------|---|---------------|---------------------|
| 40 | Company's rupees | = | $\frac{1}{2}$ | Do. |
| 80 | Ditto | = | 1 | Do. |
| 400 | Ditto | = | 5 | Do. |
| 800 | Ditto | = | 1 | Dhuda, or 10 Seers. |
| 1,600 | Ditto | = | 2 | Dhudas. |
| 3,200 | Ditto | = | 1 | Maund. |
| 20 | Maunds | = | 1 | Candy. |

Land Measure.

| | | | | |
|-----------------|---------------------|---|---|---------------|
| 8 | Yow or Barley-corns | = | 1 | Angool. |
| 4 | Angools | = | 1 | Mooth. |
| 3 | Mooshtees | = | 1 | Weet or span. |
| 2 | Weetee | = | 1 | Hath. |
| 5 $\frac{1}{2}$ | Haths | = | 1 | Katee. |
| 20 | Katees | = | 1 | Pand. |
| 20 | Pands | = | 1 | Beega. |
| 120 | Beegas | = | 1 | Chawoor. |

Gold and Silver Weight.

| | | | | |
|----|--------|---|---|--------|
| 8 | Goonja | = | 1 | Massa. |
| 12 | Massas | = | 1 | Tola. |
| 24 | Tolas | = | 1 | Seer. |
| 40 | Seers | = | 1 | Maund. |
| 20 | Maunds | = | 1 | Candy. |

Cloth and Wood Measure.

| | | | | |
|----|---------|---|---|--------|
| 2 | Angools | = | 1 | Tusoo. |
| 12 | Tusoo | = | 1 | Hath. |
| 2 | Haths | = | 1 | Guz. |

COINS.

BANKING.

Throughout the Kolhapoor State there are only twenty banking houses. The capital employed in any individual house does not exceed Rs. 50,000, and the total aggregate of capital, according to the following table, would amount to something less than Rs. 41,00,000:—

| | | | | | | |
|-----|--------------------------------|-------|----|----|----|--------------|
| 3 | houses, each with a capital of | .. | .. | .. | .. | Rs. 1,00,000 |
| 17 | ditto | ditto | .. | .. | .. | 80,000 |
| 12 | ditto | ditto | .. | .. | .. | 25,000 |
| 8 | ditto | ditto | .. | .. | .. | 20,000 |
| 7 | ditto | ditto | .. | .. | .. | 15,000 |
| 47 | ditto | ditto | .. | .. | .. | 10,000 |
| 272 | ditto | ditto | .. | .. | .. | 5,000 |
| 400 | Shroffs. | | | | | |

Of the above, there is only one house possessing any extensive agency, and capable of giving Hoondees to the amount of Rs. 5,000. From the remainder, Hoondees to the amount of Rs. 1,000 can be obtained, but only to Poona, Belgaum, and Hyderabad in the Deccan.

Under the former Government, the Kolhapoor bankers drove a thriving trade in lending money to the Chiefs and Sirdars, at exorbitant interest, 5 per cent. premium and 24 per cent. interest being the ancient terms of supply, even on the mortgage of a village, whilst an annual allowance was further set apart for Karkoonee Khurch, or expenses attending the management of the mortgaged property.

Of late years, the custom of taking a premium has been discontinued, but the rate of interest still varies from 9 to 24 per cent., excepting among tradesmen, who in their dealings with each other seldom exceed 8 per cent.

One quarter of the original loan in grain is received as interest at the succeeding harvest, and the following table will show the rate of interest, together with the sum obtainable upon certain items of mortgaged property :—

| Names of Articles. | Value. | | | Amount obtainable. | | | Interest. |
|----------------------------|--------|----|----|--------------------|----|----|--------------|
| | Rs. | a. | p. | Rs. | a. | p. | |
| Valuable cloth | 100 | 0 | 0 | 50 | 0 | 0 | 24 per cent. |
| Precious stones and pearls | 100 | 0 | 0 | 50 | 0 | 0 | 24 " |
| Gold and silver ornaments | 100 | 0 | 0 | 75 | 0 | 0 | 18 to 24 " |

The bankers also generally deal in gold, precious stones, and musk, and there is a numerous class of about 400 petty shroffs, who are content with a small average monthly profit of about Rs. 10, whose principal business consists

in exchanging coins, purchasing and selling small gold trinkets, and buying old coins no longer current.

Banking has greatly suffered from the change in the administration of Kolhapoor affairs.

Forcible and violent extortion of demand by personal torture and Dhurna have been discontinued, and the bankers are now more cautious in their speculations, and look more to individual character and security.

The ancient abuse also has been abolished, which endured the contract system of collecting revenue, when the contractor, residing at head quarters, and subjected to sudden imperative calls from the Durbar, was forced into a league with some monied house to supply the urgent demand, which was always provided by the Sowkar, but very dearly paid for by the oppressed ryot.

Lastly, the settlement of many of the Sirdars' debts, which had induced the mortgage of the greater portion of their estates, and the introduction of regular instalments in liquidation, have deprived the banking community of large sources of profit in the items of interest and management of the mortgaged property.

The Kolhapoor bankers have not kept pace with their more enterprising brethren elsewhere, and their dealings have been hitherto confined to usurious transactions within the boundaries of the Kolhapoor State. Some late trifling speculations in cotton, however, would lead to the hope that they are gradually becoming more alive to their own interests, and that ere long their capital will be employed in the manufactories and the produce of the country.

Still there have been few bankruptcies under the reformed system, and it may be observed, that in compensation of loss sustained under its provisions, the bankers contribute a mere nominal tax to the support of the State : they are now exempted from the forced levies which under the former Government they were compelled to pay as Nuzurs on succession to property, or on other pretexts.

Of the Rs. 41,00,000 of nominal banking capital, a sum of Rs. 4,00,000 may be written off as loss on account of bad debts, and a portion of Rs. 6,00,000 buried, or shut up in jewels, and a profit of about Rs. 3,80,000 may be calculated on the balance in use—a large sum to come from the profits of produce and manufacture.

LENDING AND BORROWING.—The inhabitants of Kolhapoor are generally in debt, and the actual capital of the Kolhapoor Sowkars, amounting to Rs. 31,00,000, which is lent out on various nominal rates of interest, may be distributed as follows among the heads of families :—

| | | |
|-----------------------------------------|---------|---------------|
| 18,000 cultivators | | Rs. 7,00,000 |
| 89,000 individuals of other occupations | | 20,00,000 |
| 4,000 Inamdars | | 3,00,000 |
| 111,000 | Total.. | Rs. 30,00,000 |

On this amount of capital an annual sum is received of about Rs. 3,80,000, which would yield the average rate of nearly 12 per cent. interest.

A further sum of about Rs. 37,00,000 has been advanced in former times from foreign Sowkars, chiefly, however, to the superior Jageerdars ; and altogether the entire amount owed throughout the principality is not under Rs. 67,00,000.

The annual payments to the Sowkars are made from the profits in agriculture, manufactures, and handicraft labour, and also from a portion set apart from the estates of the Jageerdars, which latter is very fluctuating, and depends on the terms of the bonds. The highly usurious terms, however, entered in these bonds, generally preclude their production in the regular Courts, where a higher rate than 6 per cent. is seldom allowed, and consequently the Sowkar is either obliged to be content with the nominal figure inserted in his books against his creditor, or to rest satisfied with a thorough sifting of accounts, and a most disagreeable abatement in his extravagant demands.

The annual average proceeds of a cultivator in middling circumstances amount to about Rs. 84.

The instalments paid to the Sowkars from the profits of cultivation amount to Rs. 72,000 ; from handicraft labour to a sum of Rs. 2,05,900 ; and from mortgages on Jageerdars' property to Rs. 1,02,100.

The total amount of property in the State, exclusive of land, may be stated to be as follows :—

| | | | | | | | | | |
|---------------------------|----|----|----|----|----|----|----|-----|-----------|
| Houses | .. | .. | .. | .. | .. | .. | .. | Rs. | 56,41,846 |
| Cattle | .. | .. | .. | .. | .. | .. | .. | | 34,25,500 |
| Jewels | .. | .. | .. | .. | .. | .. | .. | | 27,81,335 |
| Cloth and foreign goods | .. | .. | .. | .. | .. | .. | .. | | 4,05,000 |
| Agricultural dead stock | .. | .. | .. | .. | .. | .. | .. | | 14,92,857 |
| Manufacturing ditto | .. | .. | .. | .. | .. | .. | .. | | 3,11,671 |
| Handicraft ditto | .. | .. | .. | .. | .. | .. | .. | | 2,33,959 |
| Copper pots and furniture | .. | .. | .. | .. | .. | .. | .. | | 10,92,310 |
| Carts | .. | .. | .. | .. | .. | .. | .. | | 62,520 |

Total.. ..Rs. 1,54,46,998

Leaving a surplus over the debt owed amounting to Rs. 87,46,998. The rate of interest has been lately fixed from 6 to 8 per cent., recoverable in courts of law, but the ordinance can be evaded by the reception in the first instance of a heavy premium, and, with the exception of trifling advances made among themselves by artizans, who are content with 8 per cent., the ancient system of 24 per cent. is still adhered to, at least in the books of all the Sowkars.

Personal service for different periods, extending sometimes to years, is frequently made a matter of written bond agreement, for the advance required in the performance of marriage and other ceremonies, and a reckless individual

frequently signs away his liberty during a period of from three to five years, for a sum of money which is dissipated in the course of two short days.

In Kolhapoor personal restraint has not been introduced for debt, and houses and implements of agriculture and handicraft labour are also exempt from attachment and sale.

MODES OF TRANSIT AND COMMUNICATION BY LAND.

Until British superintendence was introduced, there were no roads in the State: the pathways leading down the Ghauts to the Konkun were hardly passable for lightly laden cattle, and the internal communication, which was at all times very indifferent, and consisted of a mere beaten cattle track, was entirely closed from the month of June to the month of November, according to the violence of the monsoon, when the rivers overflowed their banks, and filled the deep hollows for many hundred yards on either side, and when sugar-pans, by which a great loss of life was annually sustained, were the only means of ferry across the swollen expanse of water; and, indeed, until lately, the country was nearly inaccessible to the European traveller, from the determined hostility of the Native Government, and to the merchant from the depredations of the numerous gangs of banditti, and the exactions of every Chief and petty authority throughout the principality.

The soil, however, generally admits of good roads being made, at a trifling expense of about Rs. 300 per mile, and the plan of granting the expenditure to the intervening villages on the line has been attended with good results.

The opening of the Phoonda Ghaut has now placed the districts of Kolhapoor in short and direct communication with the sea, the distance between Kolhapoor and Waghotun being only 70 miles; and a road has been marked out traversing from west to east the entire country from the Phoonda Ghaut to Sanglee, a distance of 66 miles, and passing through the city of Kolhapoor, and other large market towns towards the Valley of the Krishna, the Collectorate of Sholapoor, and the Nizam's territories.

Branch roads, also, have been constructed (vide annexed sketch) from the capital to the principal towns in each district, from whence, also, other lines are in contemplation to join the great trunk road.

The new line from Viziadroog to Belgaum strikes off at Phoonda, and passes in a south-eastern direction for 54 miles through the districts of Bhoodurgur, Gur Ingluz, and Azra, and junction lines are intended to be carried from Bhoodurgur to Azra, and from Gur Ingluz to Nesree and Sunkeshwur (marked in the sketch by dotted lines), to complete the internal communication.

The track from Satara to Belgaum, along which military movements were

formerly made, and by which the post at present travels through the Kolhapoor districts in a fine open country, has also been slightly improved in the removal of obstructions, in the erection of a few bungalows for travellers, and in facilitating the crossing of rivers by boats ; but as the traffic from north to south is generally exceedingly trifling, and as exports from the Satara State will find a shorter route to the sea through the branch road by Punala, it has not been considered of sufficient importance to adopt any very expensive repairs.

Along the entire range of Ghauts which forms the western boundary of the State for a distance of 84 miles, there are eight rough passes and openings, which are available for the descent of laden cattle towards the sea. Of these five, Chandul, Ambe, Vishalgur, Anuskoora, and Bowra, lead to Rajapoor and Rutnageerry ; two, Bowra and Phoonda, lead to Kharapatun and Vizidroog ; and three, Phoonda, Hunmunt, and Parpolee, lead to Waree and Vingorla.

These are all protected and kept clear, and are now used by the Brinjarces. A uniform toll* is levied on all, but, with the exception of the Phoonda, they are utterly impassable for any description of wheel carriage, and during the ascent from the Konkun the cattle must be very lightly laden.

The passes on the Western Ghauts at Vishalgur, Anuskoora, and Bowra, are said to have been constructed by the Mahomedans, about the year 1660.

The filling up of the Rajapoor Creek, and consequent decline of commerce at that port, renders any expensive improvements uncalled for, to further communication on the line, and when any amount of capital can be secured at the new port of Waghotun, the traffic which was formerly carried on through the remaining outlets may in time proceed by the Phoonda Ghaut with greater facility to the merchant.

Altogether a distance of 306 miles of road work has been completed throughout the State, at an expense of Rs. 1,03,000.

The track, though generally unmetalled, is wide, and well cleared of all

obstacles to wheeled conveyances ; side gutters have been excavated, and an annual repair is allowed, at the rate of Rs. 20 per mile.

IMPEDIMENTS.—The impediments which chiefly militate against direct and continual transit and communication in Kolhapoor are the rivers, and deep valleys and hollows in the eastern half, and the mass of broken hill and Ghauts in the western half of the State.

During the months of June, July, and August the rivers continually overflow their banks for a distance of from 200 to 1,300 yards on either side, and the body of water, together with the nature of the soil, precludes the possibility of erecting cheap bridges over their soft channels, in their course through the plain and open country. Boats, therefore, are of necessity resorted to, which means of communication, however, are somewhat tedious in their transit, and not altogether satisfactory in the entire preservation of the property.

The hollows and valleys, also, containing black soil to a depth of 20 feet, become very heavy after rain, and through these portions considerable labour and expense are required to carry a good road ; otherwise the eastern half of the State is open and plain, and admirably adapted for transit and communication.

The western half, being a mass of broken hills, intersected by deep ravines, is very unsuitable, even at a great expenditure, for any line of roads, except along the circuitous bends of the rivers, as they wind to their source among the Ghauts.

FORDS, FERRIES, AND BRIDGES.—During the cold and hot seasons, from the month of November to the month of June, the water remains in the Kolhapoor rivers in a succession of deep reaches, separated by sandy plots, and there are fords over all these plots at intervals of about from two to four miles from the mouth of each individual river to its entrance into the hilly country, from whence it becomes fordable to its source.

During the rainy months, until November, boats have now superseded the use of sugar-pans on all the principal lines of traffic, and an extension of this means of communication is being gradually introduced.

Altogether there are 20 boats and 20 baskets which ply on the different rivers during the rains. The fares taken are as follows :—

| | | | | | | | |
|----------------------|----|----|----|----|----|----|---------|
| For men, with a load | .. | .. | .. | .. | .. | .. | 4 pies. |
| For cattle, ditto | .. | .. | .. | .. | .. | .. | 6 „ |

The following statement shows in detail the different stations and rivers at which they are placed :—

The mountain torrents in the Konkun Ghaut Matha are crossed during the monsoon on rude bamboo structures and jungle trees. Wooden bridges have been also thrown over the nullas and streams along the new road to the Phoonda Ghaut, and one stone bridge of ten spans, covering a space of 119 yards, has been lately erected, at an expense of Rs. 10,000, to preserve a direct communication with the country to the eastward of the city, which was nearly inaccessible during the monsoon, to the great discomfort of the inhabitants, the delay of the post, and the separation of the military and civil camps. Another bridge over the river Shalee, to benefit the Mulkapoor bazar, is under construction at an expense of Rs. 1,600. The general isolated position of the country, however, and the many large intervening rivers between Kolhapoor and Belgaum to the south, and Kolhapoor and Satara to the north, render the expensive measure of bridging the four internal rivers a matter of very doubtful benefit.

POSTAL ARRANGEMENTS.

There is a regular British Post Office at Kolhapoor, under the superintendence of a Post Master, and the annual postal revenue may be estimated at from Rs. 3,000 to Rs. 4,000, of which two-thirds is collected from the British camp, and one-third from the town and civil station.

The number of covers received for despatch monthly varies from 1,500 to 1,900, and those for delivery from 1,400 to 2,000.

Number of Covers that pass through the Office Monthly. The Post Office establishment at Kolhapoor consists of a Post Master, an English Clerk, and a small number of Peons, and the annual expense of the establishment, with contingencies, amounts to about Rs. 1,200 to Rs. 1,300.

The Post Office is situated in the suburbs of the fort of Kolhapoor, in a very central position, the military cantonment being about two and a half miles to the south, and the civil station about two miles to the northward.

There are generally two daily deliveries, one in the morning and one in the evening. The evening delivery, however, is only made when the mails arrive early in the afternoon, and the hours for receiving letters for despatch by the day's mail are from 10 A. M. to 5 P. M.

The packets are received and despatched by the line of the Bombay dawk which runs to and from Hureehur *viâ* Poona, Satara, Kurar, Kolhapoor, Belgaum, and Dharwar, and the line from Kurar to Hureehur is under the Post Master of Belgaum.

Previous to the year 1849 the runners were paid by Government at the rate of Rs. 5 per mensem, but latterly the conveyance of the mails from Kurar to Hureehur has been transferred to a contractor.

The regular post line runs along an extent of 21½ miles, through the Kolhapoor State, from the river Warna to the town of Kagul. There are six dawk Chowkees, at each of which three permanent runners are stationed, and in the event of the mails and banghies proving too heavy, Mahar Bigaries are employed, and receive 2 annas for every stage.

The rate of speed at which the different Dawks are supposed to travel during the fair and rainy seasons are as follows :—

Fair Season.

| | | | | |
|-------------------|----|----|---|----------------|
| Daily letter mail | .. | .. | 5 | miles an hour. |
| English mail | .. | .. | 4 | „ „ |
| Banghy mail | .. | .. | 3 | „ „ |

Rainy Season.

| | |
|-------------------------|--------------------|
| Daily letter mail | ..3 miles an hour. |
| English mail | ..2 „ „ |
| Banghy mail | ..1 „ „ |

The great delay during the monsoon is to be attributed to the muddy state of the roads, to the inundation of the rivers, and to the numerous nullas which intersect the line ; the rush of water, even after a slight fall of rain, being so great, that the dawks are often detained at each nulla for two or three hours, until the water has subsided ; and should the rain continue, the use of the sugar-boiler with pumpkins is enforced, as a means of transport, but generally at a great risk of life.

The present condition of the post road (for runners seldom keep to the highway) causes considerable delay, particularly at night. The present track is in many places ploughed up every sowing season ; at others, while the grain is on the ground, it is made to run round the angles of the fields, so as considerably to lengthen the distance ; and the descent to rivers and nullas, where the banks have been cut away during the floods of the monsoon, are never sloped or repaired at its close.

During the rains, much time is lost in crossing all the numerous rivers in the unwieldy ferry-boats, whilst at the large nullas there is no permanent convenience of transport, and a supply of the smaller sized fishing-boats and canoes would be invaluable for the purpose, as, although these impediments, considered separately, may appear trivial, in the aggregate they give rise to serious detention.

The great desideratum is to have a clearly defined broad pathway, as straight as circumstances admit, distinctly marked out, and a penalty inflicted wherever the line is encroached on ; and if light can be afforded during the night conveyance, the speed and safety of the mails will be greatly increased.

The mails are conveyed in leather bags or wallets, secured with a leather strap, and sealed with the seal of the last office of despatch, and the banghy wallets, in consequence of the loss of several banghy parcels, have latterly been secured with a lock and seal, a key to fit the lock remaining in charge of the clerk at each office. These wallets answer very well during the fair season, but are not proof against the heavy rains of the Southern Muratha Country, and the banghy wallets are susceptible of improvement, as the leather of those at present in use, when exposed to wet, expands considerably, and the hand may with ease be introduced to extract small parcels, without injuring the lock or seal.

An establishment of receiving houses at the adjoining principal towns of Sanglee, Meeruj, and Tasgaum would prove of great advantage, both to the public and to Government. At present service and paid letters addressed to individuals

General Remarks :
Establishment of Re-
ceiving Houses.

residing at these localities are sometimes forwarded by the district daw^k, but the letters on which postage is due are very frequently returned, to the great annoyance of the senders.

The yellow paper used by the Natives in carrying on their correspondence is of very fine texture and extremely light, a single letter seldom weighing more than three goonj ($5\frac{1}{2}$ grains Troy), on which a postage of 6 pies is charged for a distance of 100 miles. The system of clubbing letters together is carried on to a great extent, by which eight of these small letters, each weighing three goonj, can be posted to any station at a distance of 100 miles for a sum of 6 pies; but under the prevailing system, besides the loss to Government, a person is obliged to wait until a sufficient number of letters are collected before he can send his letter at the reduced rate of postage, and the establishment of a graduated system of weight and postage might prove advantageous both to the public and to Government.

The system of ready money payment is also a great temptation thrown in the way of the post office subordinates, and more so by there being little controlling check in the transaction. The public, particularly the poorer class, must leave a paid letter greatly to the honesty of the clerk, to be forwarded either as paid or bearing, and although the case is somewhat different with Europeans and Natives of higher rank, who generally have a receipt book on which the stamp is affixed, still the temptation is great, and is apt to induce dishonest entry.

LOCAL OR MOOLKEE DAWK.—Besides the regular post, there is a local district daw^k at Kolhapoor, by which official and occasionally private letters are conveyed to the different Petas from the Hoozoor Kucheree, but no postage is charged on either.

There are seven lines, which run from Kolhapoor to the following Petas, viz:—

| | | | | | |
|----------------------------------|-----|----|----|---------|--------|
| From Kolhapoor to Bhoodurgur.. | .. | .. | .. | 36 | miles. |
| „ „ to Punala and Kairlee . | .. | .. | .. | 12, 5½ | „ |
| „ „ to Alte and Sherole .. | ... | .. | .. | 15, 28½ | „ |
| „ „ to Gur Ingluz and Kudgaon .. | .. | .. | .. | 36, 38 | „ |
| „ „ to Mulkapoor .. | .. | .. | .. | 30 | „ |
| „ „ to Bowra .. | .. | .. | .. | 36 | „ |
| „ „ to Hoopree .. | .. | .. | .. | 12 | „ |

The annual expense for the district daw^k may be estimated at Rs. 2,500 to Rs. 3,000.

It is despatched every night about 9 o'clock, and the rate at which the runners travel is two miles an hour.

About 1,000 official packets and 100 private letters are received at Kolhapoor, and the same number despatched during the month; and owing to the

Native paper used in the correspondence, the estimated postage, calculated according to the usual rates, would amount on the official packets to a sum of Rs. 1,000, and on the private letters to a sum of Rs. 100.

TAXATION.

The public revenue is drawn chiefly from the rent of land, although a share is contributed by commerce under the head of customs and town duties. Other sources are also exhibited under the head of Sayer revenue, together with occasional imposts on Inamdars and Jageerdars.

On the issue of any grant, or on its removal from attachment, a considerable sum is received as Nuzurana. Payments are also made on acknowledgment of heirship, and upon the occasion also of marriages, and other ceremonies in the royal family.

The entire annual sum received for the purposes of State government, and Jageer management, throughout the principality, amounts to Rs. 19,33,426, which would involve an annual payment of Rs. 3-8-7 on every individual of the population. The proportion of the rendered produce, however, is very dissimilar on the Khalsa, and alienated land, the first being generally fixed at a high rate, whilst the rent of the Jageer land is fluctuating, and somewhat less in proportion.

Whilst the rates thus vary from Rs. 54 to 5 annas, the average amount paid on the beega amounts to Rs. 3-14-3; still very few complaints are in any part of the country made of over-assessment, and the instances are indeed rare of a cultivator's goods under ordinary circumstances being distrained for rent.

The following table exhibits the peculiar items of taxation, which appears to bear hard on the ryot, but which have been established from ancient times, and the abolition of which never formed the subject of petition :—

| | |
|-------------------------------|--------------------|
| Tax on forage. | Muslut Putee. |
| Ditto timber. | Mahamoor ditto. |
| Ditto Merasee. | Tota ditto. |
| Ditto water taken from tanks. | Wurgul ditto. |
| Kot Putee. | Toop Wurgut ditto. |
| Ooroos ditto. | Jhar ditto. |
| Sadilwar ditto. | Bhopla ditto. |

The following table exhibits the cesses which have formed the subject of petition, but the abolition of which the present state of finance will not admit :—

| | |
|------------------------|--------------------------|
| Putee on Inamdars, &c. | Putee on Hoozoor Sundee. |
| Ditto Moinee Inam, &c. | Ditto Khoonkhat. |
| Ditto Urjee ditto. | Ditto Bulootedars. |
| Ditto Inam Tijaee. | Ditto Dewuskee. |

Putee on Eksalee.
Ditto Ambilkhat.

Putee on Keerkole Beegawun.

These taxes certainly bear hard on the Government servants who pay, besides being required to perform service, but the abolition is too costly a measure to be at present thought of.

Transit duties have been abolished, together with the obnoxious Putees on hired tattoos, pack-bullocks, and the Fuskee Ookala; and if the finances of the State could afford the reduction, the following taxes might be with great benefit abolished :-

| | |
|-----------------------------------|--------------------|
| Toll on ferries. | Toll on Goolal. |
| Do. Pan leaves. | Do. Shradha. |
| Do. brokerage. | Do. Gosavee Jewun. |
| Do. Dhawur. | Do. Coir Putee. |
| Do. Wun Mhys to cultivators only. | Do. Chinda. |
| | Do. wood and fuel. |

In the absence of a correct survey, however, it is very difficult to arrive at the actual capability of the land, or the requirement of the cultivator; and the anomalous position of the Khalsa and alienated land renders the introduction of a revenue measurement a very delicate operation; still the exemption from all complaint, and the promptitude of payment, the thriving and increasing condition of the villages, and the trifling amount of waste land, would prove the non-existence among the ryots of any serious oppression or vexatious taxation.

MODE OF COLLECTING REVENUE.—The Lownee Putruk shows the names of all the village cultivators, the quantity and nature of land taken by each for cultivation, together with the amount of rent to be paid to the Government, the comparative profit and loss of the present and preceding year, together with the different rates of the various Huks and other taxes. The Shekdar then visits the village, and after a personal examination confirms the correctness of the statement, one copy of which is forwarded to the Mamlutdar, and one kept with the Patel and Koolkurnee of the village.

In Kolhapoor, the recovery of revenue formerly commenced during the month of August, and as at that season the crops had not reached maturity, the ryots were obliged to borrow from a Sowkar, to their great injury. This oppressive practice has been discontinued, and the collections now commence during the month of November.

The amount of rent due by each cultivator is shown in the annual Lownee Putruk, and after this amount, and the sum realized for the preceding year, together with the nature of the individual crop, have been fully taken into consideration, the actual balance is settled by the Mamlutdar to be paid by each cultivator in three or six instalments, according to the nature of the crops, from November to April, and a demand for the first instalment is made first by the Patel and Koolkurnee, then by the Sepoy sent by the Shekdar, and (sometimes) by the Shekdar himself. The money, when recovered, is carried by Sundee sepoys to the district treasury, and on accumulating to a sum of Rs. 10,000 is transmitted to the treasury at the Hoozoor.

Should the Government demand by any chance be made before the full time of harvest, the cultivator has in the first instance recourse to the Shekdar, and, failing of redress, he can proceed to the Mamlutdar, and in the event of his not obtaining the desired delay, he can apply to the Hoozoor, where instructions are always issued, that time be allowed, in the event of the facts being in accordance with the presented petition.

Should, however, the cultivator evade payment, or be otherwise suspected of any intention to appropriate the proceeds of the crops, it is usual to enforce a security to save the Government from loss, or to place a Rukhwaldar over the field until the rates be paid.

The dishonest cultivator who conceals the produce of his fields, and will not pay his settled instalments, is forwarded by the Shekdar to the Mamlutdar; and if the orders of the Mamlutdar prove of no avail, he is forwarded to the Hoozoor, with a recommendation that his property may be seized. A strict investigation is made, and, according to the merits of the case, should the cultivator agree to give security, and ask time for payment, his request is granted; but if he declines to give security, being at the same time solvent, instructions received from the Political Superintendent are sent to the Mamlutdar for the seizure and sale of sufficient property to satisfy the Government demand; but these extreme measures very seldom occur, and the Government revenue is generally realized without any difficulty.

Should any failure in the prospects of the crops be reported, the Shekdar and Mamlutdar proceed and inspect the fields; a rough calculation of the entire produce is made, together with an estimate of the damaged portion, and the Mamlutdar forwards a statement, showing a remission he thinks should be granted for the anticipated loss. A Karkoon is also deputed in all serious cases from head quarters to re-inspect and investigate, and after a full inquiry, the final permission of the Political Superintendent for the amount of remission is obtained, and the deduction is duly made.

After this deduction has been allowed, it is frequently found absolutely necessary to grant, as remission, any balance remaining due in consequence of insolvency, or on account of losses incurred from the death and the departure of individual cultivators, and the destruction by fire of houses or crops; and should these occurrences take place before the annual revenue settlement, the deduction is duly exhibited in the figured revenue statement for the current year. But if the settlement has been already effected, these losses are retained for disposal during the ensuing season, and a statement of the actual unrecovered balance only of the current year is forwarded for the instructions of Government.

The sale of the implements of husbandry and bullocks belonging to a cultivator, for the recovery of revenue, is never allowed in Kolhapoor; but if a cultivator chooses to reserve the produce of his field, and to send to the market any overplus of his farm stock, he is not prevented by the authorities from doing so.

MILITARY RESOURCES OF KOLHIAPOOR AND ITS DEPENDENCIES.

The population of the Kolhapoor territory, including the feudatory Jageers, may be estimated at about 550,000 souls, and the revenue at about Rs. 18,00,000. All the feudatory Jageerdars are involved in debt, as is also the parent State of Kolhapoor, whose entire revenue amounts at present to Rs. 5,50,000. On a very moderate calculation, 80,000 fighting men between the ages of eighteen and forty might be speedily entertained, and up to the present day from olden times, the inhabitants have been easily induced to engage in forays and predatory warfare, and the name of the great Shivajee is still used as the means of excitement. The great proportion of military dependents, with the exception of the established local force, serve as militia only when called upon, and enjoy for their service small grants of lands, for which they possess Sunuds in perpetuity, received from the different Rajas of the country, who, since the establishment of Kolhapoor as an independent State, have been always at feud with their neighbours. The inhabitants, however, are greatly averse to serve in foreign parts, or with foreign powers, and will not willingly quit their Native home. The country is a difficult one for military operations, on account of thick jungles, rugged ascents, and very imperfect pathways, principally on the western boundary; and, during the prevalence of the monsoon, from the nature of the soil, and the extensive overflowing of the rivers from their banks. Iron in small quantities is a product of the country, and a few guns were founded by the late Raja. Matchlocks were also formerly manufactured; but this trade has been lately discouraged, and the principal articles required for the manufacture of gunpowder were always received from the coast.

Although the extent and luxuriance of the grass lands are highly favourable for rearing horses, the Kolhapoor breed is very indifferent, and the demand is considerably supplied from the neighbouring States, and from foreign countries.

Horned cattle are numerous, but of inferior appearance and quality, and unsuited for purposes of heavy draught. Grain of various sorts, wheat, Bajree, Jowaree, sugar, and cotton, are exported to the coast, the country being in ordinary seasons highly productive, and producing a quantity in excess of the consumption. The hill forts, amounting in number to eleven, with the exception of Munohur and Munsuntosh, transferred to the charge of the Sawunt Waree Superintendency, which heretofore have been considered as the great bulwarks of the country, and the rallying points for the disaffected, have been all dismantled and destroyed, and each succeeding monsoon adds to the ruin of the existing masoury. The hills, however, must always remain as most powerful positions to the occupiers.

The annexed and following tables show the existing military forces of the principality and principal Jageerdars, together with their ordnance :—

Military Resources of the principal Jageerdars.

| Jageerdars. | Horsemen. | Foot Soldiers. | Girkurees, Shetsundoes. | Camp Followers. | Guns. | Annual Charges. | | |

PUBLIC BUILDINGS.

The following statement shows the details and value of Kolhapoor public buildings, which latter, exclusive of the forts, amounts to a sum of Rs. 8,63,534-13-8. An annual sum of Rs. 11,605 is allowed for repairs, which are effected as soon as possible after the damage has been reported to head quarters.

The old buildings are generally composed of stone and mud, and faced with chunam, and the modern erections have been constructed of pukka brick and chunam; the wood-work, however, of all, has been obtained from the Kolhapoor forests, and consists chiefly of Ayeen, Khuyeer, Jamblee, and jackwood.

The sum of Rs. 2,00,000, which has been expended by Government during the last eight years on public works of utility, amounts to nearly 5 per cent. on the revenues received during that period, and the inhabitants are generally willing to subscribe to any work of utility, according to their means, provided their consent is asked in a courteous manner.

I.—*Government Palaces.*

DEPENDENT JAGEERS.

The following additional details are given respecting the six dependent Jageers, whose returns of population and revenue have been already included in the general statements of the territory, and whose integrity has formed articles of treaty with the British Government.

VISHALGUR.—Krishna Rao is the fifteenth of a line of chiefs, who, during a course of 194 years, have held the Jageer, and filled the office of Pruteenidhee, or *alter ego* one of the eight Prudhans of Muratha rule.

Originally created in the year 1660 by the great Shivajee, on the separation of the Satara State in 1729, the Jageer was continued on Sunud to Junardhun Punt by Shivajee, the first prince of Kolhapoor, and since that period, service has been rendered to, or enforced by the parent State, the quota for feudal service being fixed at 49 horse and 150 foot.

The fort of Vishalgur appears from ancient inscriptions to have been in the twelfth century the seat of government of the western portion of the country, and, after the expulsion of the Mahomedans in 1600, continued to be the head quarters of the Pruteenidhee until the year 1844, when the fortifications were destroyed, and the small town of Mulkapoor, on the river Shalee, was selected as a more healthy and agreeable location for the Court than the confined fortress, where, during the monsoon, the continued fog and mist induced severe rheumatism, and where at other seasons strong unhealthy easterly winds were prevalent.

The productions of the country consist chiefly of rice, and the usual varieties of grain grown in a hilly country possessing a moist climate. Though not in sufficient quantity for the demand, oil, wood, flax, wool, ghee, honey, and iron are produced in considerable quantities, and large flocks of sheep are pastured among the hills.

The finer descriptions of rice are all exported, and common grain largely imported instead. The exports further consist of ghee, honey, turmeric, dyes, sheep, wood, and wax, and the imports of dried fruits, sugar, and condiments, cloth, metals, salt, and brass pots, forming a total of imports amounting to Rs. 1,13,963, against exports to the amount of Rs. 76,425.

The fortress of Vishalgur has been completely destroyed, but the country throughout is difficult for any military operations; and although the only high-road from Rutnageerry runs through this district, the passes up the Ghauts are impracticable for any description of wheeled conveyance.

The former possessions of this Suwasthan in the Konkun have been transferred to the management of the Collector of Rutnageerry, who forwards a fixed annual sum of Rs. 29,000 to the Vishalgur treasury, and the following comprise the details of the possessions above the Ghauts, which remain under the immediate control of the Chief:—

Number, Classes, and Proceeds of Villages.

| | | |
|--------------------------------------------|---------|-----------|
| 3 towns and 60 villages, containing beegas | .. | 13,797 |
| Inam lands, ditto | .. | 2,415 |
| Khalsa, cultivated, ditto | .. | 10,211 |
| Ditto uncultivated, ditto | .. | 1,317 |
| Proceeds of Inam | | Rs. 7,228 |
| Ditto of Khalsa | | 28,726 |
| Mahal Muzkoor | | 4,691 |
| Net proceeds of Khalsa | | 24,035 |
| Receipts from Rutnageerry | | 29,000 |
| Total annual revenue | | 64,954 |

Establishment.

| | | |
|-----------------------|---------|-----|
| Karkoons | | 57 |
| Horse | | 25 |
| Sundees and Gurkurees | | 201 |

The expenses of the Suwusthan have been fixed at Rs. 56,000, leaving a balance of Rs. 8,954 for accumulation, as the State is now free; the old debts, amounting to a sum of Rs. 3,92,063, having been lately compromised and paid off.

BOWRA.—The original Sunud for the Jageer of Bowra, with the office of Amatya, or Minister of Finance, was granted by the great Shivajee, in the year 1660, to Nilo Sondeo, a Konkunee Bramin, and the office and estate were continued in the year 1732 by Prince Shivajee of Kolhapoor to Ramchundru Nilkunt, who had greatly distinguished himself as a partizan of the Kolhapoor faction, and who bound himself to render faithful service with a quota of 24 horse and 75 foot.

Since the year 1732, eleven chiefs have held the office and Jageer, with very little distinction to themselves, or any benefit to the estate, which remained until lately overwhelmed in debt, and was nearly impassable to merchants, owing to the countenance and support afforded by the chiefs to the caterans of this wild tract.

The estate adjoins Vishalgur, and presents similar features of rugged hill and thick jungle: the climate is unhealthy, from the excessive falls of rain, and the inhabitants are poor and hardy, and of a somewhat warlike temperament.

The new road towards the coast, however, which has been lately carried through this tract, will materially tend to lessen the difficulties of any future military operations which may be undertaken, and the clear boundary line of the Western Ghauts, which has been established, will admit of easy approach to the foot of the hills, and of thus effectually closing the jungles of the Konkun.

The productions of the country are similar to those of the adjacent district of Vishalgur, the exports exceeding the internal demand, consisting of wood,

molasses, ghee, hurdey, gull-nuts, and rice, whilst rice and common grain, cotton, tobacco, sugar, and dried fruits form the great articles of import.

The following comprise the additional details of this estate:—

Number of Villages 72, containing a population of 29,845 souls, residing in 5,044 houses, of which 2,381 are built of stone and sun-dried brick, and 2,663 of wattle and mud.

| | | | | |
|---------------------------------|----|----|----|------------------|
| Inam lands, containing beegas.. | .. | .. | .. | 2,415 |
| Khalsa, cultivated, ditto | .. | .. | .. | 39,477 |
| Ditto, uncultivated, ditto | .. | .. | .. | 4,337 |
| Total.. | | | | .. Beegas 46,229 |
| Proceeds of Inam | .. | .. | .. | .. Rs. 5,151 |
| Ditto of Khalsa | .. | .. | .. | 46,446 |
| Fixed annual expenditure | .. | .. | .. | 40,633 |

Establishment.

| | | | | | | |
|--------------------------|----|----|----|----|----|-----|
| Karkoons | .. | .. | .. | .. | .. | 81 |
| Horsemen | .. | .. | .. | .. | .. | 16 |
| Seebundeas and Gurkurees | .. | .. | .. | .. | .. | 497 |

A large debt of Rs. 1,01,227 has been lately compromised and paid off, leaving an annual balance of Rs. 5,813 to accumulate in the treasury.

KAGUL.—The Jageer of Kagul belongs to Jeysing Rao Ghatgay, and is portioned among the different members of the Ghatgay family.

Originally received from Yusooif Adil Shah, the last King of Beejapoor, the Jageer was confirmed to the Ghatgay family by the Emperor of Delhi, and transferred by the treaty of 1729 to the supremacy of Kolhapoor.

The original fixed quota of 49 horse and 125 foot for feudal service has never been enforced, excepting on the most emergent occasions.

The district of Walwa, which forms the western portion of the estate, was confirmed to Wishwas Rao by Shivajee of Kolhapoor on his sister's marriage to the Ghatgay in the year 1786. On the marriage in 1792 of Eshwunt Rao Ghatgay, a cousin to the daughter of Shivajee, the Jageer of Kagul was confirmed in grant to that Chief, but on a series of most important services being rendered by his cousin, the notorious Sukharam, the younger brother of Wishwas Rao, the Sunuds for Kagul were made out in his name, and the district of Walwa was confirmed in Jageer in 1793 to Wishwas Rao, whose fourth wife, Rumabace Saheb, still enjoys the grant.

Jeysing Rao, styled Hindoo Rao Baba, the present head of the family, together with his sister, the celebrated Baiza Bace Saheb, reside in Hindustan.

The estate is situated chiefly in the plain country, and is easy of access on all sides. There is a small stone fort at the town of Kagul, but without any ditch, and of no strength whatever.

Kagul contains 17,012 beegas of land, and 28,290 inhabitants, dwelling in 70 towns and villages, and 5,194 houses, chiefly composed of sun-burnt brick, and tiled. The subordinate district of Walwa contains 2,637 beegas of

land, and 3,075 inhabitants, dwelling in 8 villages, yielding a revenue of Rs. 29,757.

The entire aggregate net annual revenue of the Kagul estate amounts to Rs. 46,166, which, according to the following figured statement, is barely sufficient to cover the expenses, which are allowed on a very liberal scale, the Chief possessing other resources in Hindustan at his command :—

| | | | | |
|-------------------------------------|-----|----|----|------------|
| Inam lands, containing beegas | *.. | .. | .. | 11,407 |
| Khalsa ditto, cultivated, ditto | .. | .. | .. | 5,605 |
| Total number of beegas.. | | | | 17,012* |
| Annual proceeds of the Khalsa lands | .. | .. | .. | Rs. 46,166 |
| Ditto of the Inam lands | .. | .. | .. | 1,34,562 |

Establishment.

| | | | | | | | | |
|--------------------------|----|----|----|----|----|----|----|------------|
| Sundees | .. | .. | .. | .. | .. | .. | .. | 1,150 |
| Itlak | .. | .. | .. | .. | .. | .. | .. | 250 |
| Karkoons | .. | .. | .. | .. | .. | .. | .. | 40 |
| Sowars | .. | .. | .. | .. | .. | .. | .. | 15 |
| Expense of the Suwusthan | .. | .. | .. | .. | .. | .. | .. | Rs. 46,000 |
| 70½ villages. | | | | | | | | |

The imports and exports are similar in description to those of the adjacent district of Inchulkurunjee.

INCHULKURUNJEE.—Naro Mahadeo, an inhabitant of the Konkun, and the first celebrated ancestor of the Chief of Inchulkurunjee, was entertained about the year 1700, as a domestic Bramin in the house of Suntajee Ghorepuday of Kapsee, to perform the worship of his family deities.

Naro Mahadeo having subsequently distinguished himself in the field, under Suntajee, during the struggle which was in progress with the Mahomedan forces, became a first favourite of the gallant Senaputee, who ever afterwards styled him as his son.

At this period, also, Naro Mahadeo assumed the surname of Ghorepuday, obtained sundry villages from his patron ; and the correspondence carried on since that time between the Chief of Inchulkurunjee and the Senaputee Ghorepuday is, as regards the address, similar to what is usually written from a father to his child.

Naro's son Venkut Rao added a further increase of honour and possession to the family by his distinguished conduct in the field under Shahoo Raja of Satara, and by his marriage in 1713 with Annoo Bae Saheb, the daughter of Balajee Wishwanath, who was appointed Peshwa by Shahoo Maharaj.

In consequence of this alliance, the district of Azra was conferred on Venkut Rao from the possessions of the Senaputee, but it cannot be ascertained whether any indemnification was allowed. The loss, however, was

* There are also 5,605 beegas of waste Khalsa lands.

entirely to the cost of the Kolhapoor State, who lost all hold on the district, and obtained a very faithless retainer in the room of a trusty adherent.

Venkut Rao was succeeded in his estates by two lineal descendants, his son Narayen and his grandson Venkut, who died without heirs, but an adoption was allowed to the widow by the Peshwa, on the payment to the Poona Durbar of a Nuzurana of Rs. 2,00,000, and the late incumbent, Tatia Saheb, the younger son of the adopted individual, dying intestate in 1852, was succeeded in 1853 by the present Chief, Venkut Rao Saheb, an adoption from the family of the Josee of Hoopree.

The ancestors of the Chiefs of Inchulkurunjee were active mercenaries during the troublesome times of the seventeenth and eighteenth centuries, selling their services to various parties : first to the Ghorepuday Senaputee, the original patron of the family, then again to a chieftain holding place in the Nizam's dominions, again under the Satara Raja, and latterly, as the power of the Peshwa expanded, commanding a Contingent paid by the Poona Durbar.

The entire remaining estate of Inchulkurunjee, with the exception of five villages respectively bestowed by the Raja of Kolhapoor, and the Desaees of Sawunt Waree, Wuntmoor, Gokak, and Nepanee, was received either from Shahoo Raja of Satara, or from the Ghorepuday Senaputee ; and if service was rendered at any time to Kolhapoor, it was in general made with 25 horse and 50 foot, and formed a matter of payment.

The following comprise the additional details regarding this Suwasthan :—

Number of Villages 88, containing a population of 43,000 souls, dwelling in 8,604 houses, 6,557 of which are composed of burnt brick and tiled, and the remainder of wattle and mud, and thatched.

This district frequently suffers from drought, although wells and small water holes are abundant. Owing to the religious tenets of the Chief, who is a Bramin, a few seminaries exist for tuition in Sanscrit, and about 15 small rudimentary schools have been lately established.

The exports from this estate consist of grain, tobacco, ghee, goor, cotton, and country cloth, amounting to an annual sum of Rs. 27,700, whilst imports are received to an annual amount of Rs. 40,300 in salt, spices, dried fruits, sugar, and English cloth.

KAPSEE.—The house of Ghorepuday, which is one of the oldest in the Muratha empire, is divided into three branches. At the head of the first is Narayen Rao, son of Govind Rao, eldest son of Malojee Raja. He resides at the family fort called Moodhole, on the Ghutuprubha.

At the head of the second branch is Bujing Rao, whose hereditary residence is at Gujungrugur. The famous Moorar Rao was of this branch, which has fallen into decay.

The present head of the third branch of this family is Ramchundru Rao Ghorepuday, who resides at Kapsee, and Jeswunt Rao Ghorepuday. Ameer ool Oomrao, who negotiated the peace of Surjé Anjungaon, belonged to this family.

The entire aggregate annual revenue of this estate amounts to Rs. 22,455, and the following comprise the additional details regarding this small estate :—

Number of Villages 13, containing a population of 8,035 souls, dwelling in 1,401 houses, half being built of sun-burnt brick, and tiled, and half of wattle and mud, and thatched with grass.

The exports consist of molasses, tobacco, cotton, oil, ghee, and vegetables ; whilst the imports are salt, spices, dried fruits, and cloth.

|-------------------------------|-----------|

| | |
|-------------------------------|--------|
| Ditto of Khalsa lands | 14,318 |
|-------------------------------|--------|

The expenditure of the Suwusthan has been fixed at Rs. 10,000, leaving a balance of Rs. 4,318 for the liquidation of a debt of Rs. 23,000, which, being of no length standing, is difficult of compromise.

The former quota for feudal service consisted of 9 horse and 30 foot.

TOREGUL.—The family of Toregul date their origin about the year 1690, when their ancestor Nursojee, son of Moorar Rao Sindia, commanded a large force under Raja Ram, and being successfully employed in taking the outlying fort of Toregul, which belonged to the Beejapoor State, was rewarded with the Jageer and title of Senakhaskhel.

His son Luxoomon proved himself a staunch retainer during Shivajee's numerous feuds, and bore the brunt of many of the Putwurdhun raids.

For his continued services and fidelity his son Sumbhajee received the title of Sena Dhoorundhur Wishwas Nidhee,* and was left behind to collect the revenues

* "Leader of the Army," and "The Ocean of Confidence."

after the Kolhapoor foray into the Carnatic. The Toregul troops assisted also at the battle of Pultunkooree, and in the siege of Kolhapoor, when the Chief was again honoured with the further title of Sumust Shree Dhoorundhur.*

The Toregul troops suffered considerable loss in the fatal fights with the Chief of Nepanee. A sum of Rs. 10,000 was distributed among them as blood-money by the Maharaj, at the termination of the feud, and many villages and pensions which are enjoyed by their descendants to this day, were bestowed on the relations of the Sirdars who fell in the battles.

The entire aggregate annual net revenue of this estate amounts to Rs. 32,820, which, according to the following figured statement, is barely sufficient to cover the expenses, without contributing anything to the large liability of Rs. 80,000 which is still outstanding against this petty Jageer.

| 6 | Jotiajee Rao bin Appajee Rao, <i>alias</i> Bhao Saheb, and his nephew Appajee Rao Dhondjee Rao. | Nimbalkur. | Naik. | <i>Rs. a. p.</i> 1,825 8 6 | The family assert that the title of Naik was first conferred on Appajee Rao Nimbalkur, father of Jotiajee Rao, by Shivajee II. of Kolhapoor. No information, however, can be obtained from the Government records, to corroborate the statement. |
| 7 | Ramchundru Rao bin Nagojee Rao, <i>alias</i> Dada Saheb, brother-in-law of H. II. the Raja Saheb. | Patunkur. | None. | 13,688 12 9 | A First Class Sirdar. |
| 8 | Narayen Rao bin Eshwunt Rao, <i>alias</i> Nana Saheb, brother-in-law of H. H. the Raja Saheb, the young Chief of Kagul. | Ghatgay. | Surjé Rao. | 21,942 15 7 | Bhanjee Ghatgay, Deshmook of Kagul, who was in the service of Shahaajee, the father of Shivajee, the founder of the Muratha empire, having encountered the forces of the Nizam Shahee Government, defeated Doodla Surjé Rao Rajpoot, and seized his horse and Surja (the crest of the horse). Shahaajee, father of Shivajee, the founder of the Muratha empire, accordingly conferred on him the title of Surjé Rao. |
| 9 | Shahaajee Rao bin Malojee Rao Khanvutkur, <i>alias</i> Dada Saheb. | Bhoslay. | None. | 2,991 11 6 | A First Class Sirdar. |
| 10 | <i>Ministers.</i> Krishna Rao Amroot Rao, <i>alias</i> Krishna Rao Bhao Saheb, the Chief of Vishalgur. | None. | Pruteenidhee, or the Raja's Deputy. | | On account of the meritorious deeds of Purushram Trimbuk, while in the service of Rajaram, the great-great-grandfather of the present Raja, the title of Sumsheer Bahadoor was conferred on him. |

| | | | | | | |
|----|----------------------------------------------------------------------------------|-------------|------------------------|--------------|--|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11 | Moreschwur Rao Ram Rao, <i>alias</i> Baba Saheb, the Chief of Bowra. | Bhadanikur. | Amatya. | | | In consequence of his subsequent valuable assistance in the acquisition of territory, the title of Pruteenidhee was bestowed on him in A. D. 1697, that of Sumsheer Bahadoor being cancelled. |
| 12 | Dajee Krishna | Pundit. | Rao Bahadoor. | 6,000 0 0 | | On account of the faithful services of Nilo Sondeo, Shivajee, the founder of the Muratha empire, invested him with the title of Punt Amatya in the year A. D. 1676. |
| 13 | All the Chitneesses of the State, eighteen in number. | | | | | The distinguishing title was conferred on the 14th of April 1845, by the Bombay Government. He enjoys a cash allowance of Rs. 500 per month. |
| | <i>Sirdars.</i> | | | | | |
| 14 | Jysing Rao bin Sukharam Rao, <i>alias</i> Hindoo Rao Baba Saheb, Chief of Kagul. | Ghatgay. | Surjé Rao Wujarut Mab. | 1,85,566 7 9 | | With reference to the title of Surjé Rao (vide No. 8), and during the military operations against the Chief of Napanee, Jysing Rao having rendered important services, the title of Wujarut Mab was conferred on him as a special mark of honour by Shivajee II. in A. D. 1808. |
| 15 | Dowlut Rao bin Bhoojung Rao, Chief of Gujendrugur. | Ghorepudav. | Hindoo Rao. | 6,401 9 6 | | On account of the important services of Bulirjee Rao Ghorepudav, the original recipient during military operations, the title of Hindoo Rao was bestowed on him by H. H. Raja Ram in A. D. 1688. The family of this Chief assert, however, that the title of Hindoo Rao was granted to it from very ancient times by the sovereign of Delhi. |
| 16 | Rutajee Rao bin Oodajee Rao, <i>alias</i> Rao Saheb. | Chowan. | Himmut Bahadoor. | 36,856 12 4 | | On account of the faithful services rendered to Shivajee, the founder of the Muratha empire, by Ranajee Rao Chowan, the original recipient, and subsequently by his son Witojee Rao, the title of Himmut Bahadoor was conferred on him by H. H. Raja Ram in A. D. 1688. Enjoys the privilege of civil and criminal administration. |

| | 6 | Buhirow Rao Ramechundru Rao Pundit. | ... | Rajadnya. | 1,016 1 9 | On account of the important services rendered by Rutnakur Ram, the original recipient, to Shivajee II. in military operations, the title of <i>Rajadnya</i> was conferred on him in A. D. 1796. |
| | 7 | Gunput Rao Shreeneewas Pundit. | Hunmuntay. | Soomunt. | 2,610 11 0 | Shivajee, the founder of the Muratha empire, assigned villages, &c., and conferred the title of Pundit Soomunt on the original recipient, Junardhun Punt Hunmuntay, in A. D. 1674, on account of his faithful services. |
| | 8 | Gopalcharya bin Mahaduwacharya. | ... | Pundit Rao. | 1,035 6 6 | Shreekrucharya, the original recipient, having rendered important services to H. H. Raja Ram, while at Tanjore, the title of Pundit Rao was conferred on him in the year 1688. |
| | 9 | Ramechundru Rao bin Suintajee Rao, Chief of Kapsee. | Ghorepuday. | Senaputee. | 22,747 5 9 | H. H. Raja Ram conferred the title of Senaputee on Suintajee Rao Ghorepuday, the original recipient, in A. D. 1688, he having proved himself useful in the acquisition of territory. |
| | 10 | Luxoomon Rao bin Sumbhajee Rao, Chief of Toregul. | Sinday. | Senakhaskel. | 53,056 0 9 | On account of the important services rendered in military operations to Shivajee, the founder of the Muratha empire, by Nursojee Sinday Jeev Rao and Sooltan Rao, sons of Moorar Rao Sinday, Toregul and other villages were assigned to them on Inam and Surinjam tenure. Soobhan Rao Sinday, the grandfather of the present Chief, having proved himself very useful in quelling an insurrection which had taken place in the Deccan, the title of Senakhaskel was bestowed on him by Sumbhajee I. in A. D. 1732. |

ON THE LEFT SIDE.

| | | | | | | | |
|----|----------------------------------------------------------------------------------------------------|-------------|----------------------|----------|----|---|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11 | Narayan Rao bin Malojee Rao, <i>alias</i> Nana Saheb (Chief of Dutwar), and Venkut Rao Saheb. | Ghorepuday. | Ameer ool Oomrao. | 17,083 | 12 | 9 | On account of the important services rendered by Malojee Rao, the original recipient, in military operations, the title of Ameer ool Oomrao was conferred on him by Raja Ram in A. D. 1688. |
| 12 | Hummunt Rao bin Sooltan Rao, <i>alias</i> Rao Saheb. | Nimbalkur. | Surlushkur Bahadoor. | 30,641 | 2 | 0 | Hummunt Rao was first adopted by Balabae Aka Saheb, the sister of the grandfather of the present Raja. Subsequently H. H. Bawa Saheb conferred on him the title of Surlushkur, which had been originally bestowed on his father by Sumbhaje I., in A. D. 1727, the great grandfather of the present Raja. The title of Bahadoor had been conferred by the Nawab of Hyderabad on Hybut Rao, Hummunt Rao's grandfather. He is one of the principal officers of the Kolhapoor army. |
| 13 | Keshow Rao Narayan, <i>alias</i> Tatia Saheb, Chief of Inchul-kurunjee, deceased, his adopted son. | Josee. | Ghorepuday. | 1,05,544 | 6 | 6 | Naro Mahadeo, the original recipient, having entered the service of the Senaputee of Kapsee, and rendered him faithful service, the title of Ghorepuday was conferred on him by the Senaputee; and villages were assigned out of his own possessions. The Jageer of Azra was subsequently added on his connection by marriage, in 1713, with the daughter of the Peshwa Balajee Wishwanath. This Chief is inserted in the Government list of First Class Sirdars of the Southern Muratha Country. |
| 14 | Sudasew Rao Jotee, <i>alias</i> Bhaoo Saheb. | . . . | Dewan. | 3,588 | 9 | 0 | This Sirdar states that he was originally entrusted with the care of their late Highnesses Sumbhaje II. <i>alias</i> Aba Saheb, and Shabhaje, <i>alias</i> Bawa Saheb Maharaj, the uncle and father of the present Raja, while they were at Punala during their minority, and during that time, about 1800, was styled Dewan, as a mark of courtesy. This title, however, has been continued to him up to the present time, in all official communications. The above statement is supported by the information obtained from the records. |

ANTIQUITIES OF KOLHAPOOR.

The antiquities of Kolhapoor exist in her legends, in a few rock caves, in the scarped faces of her fortresses, in her temples, and in the inscriptions which have been cut on slabs of stone, or indented into plates of copper.

There are no ruins of any great magnitude, the mementos of any large and former flourishing town, and no traces have been hitherto discovered of a pristine, materially differing from the present, race of inhabitants.

By the legends current, Raja Ram is said to have been king over all the country included between the river Nerbuda and the sea, during the early part of the sixth century. He was succeeded by Pelore, and in the year A. D. 579 by Roomdna, a great conqueror, who afterwards changed the ancient name of the city Indruprusta into Delhi.

In A. D. 789 the prince of Jyunugur overran the southern portions of the country under the guidance of his minister, Hemar Punt, to whom the invention of the Moree character is attributed. A blank follows for a period of 200 years, of which tradition renders no account, and until the year 1028, when the inscriptions afford a slight glimmer of light.

The rock caves, Mahtas or Grihas, are to be found in the immediate vicinity of the great sites of modern superstition; and although generally of the usual primitive form, some are more spacious and commodious than others, where the Venha, or reservoir of water, has been added for the convenience of the inmates; and many of the caves are still objects of veneration, occasionally forming the habitation of the wandering Gosavee, whose solitary figure, dressed in the usual orange-coloured habiliment, may be seen basking at the entrance.

The aspect of the apertures appears to be entirely accidental, as they variously face the four quarters of the compass, in accordance with the natural scope of the hill; but the site has been always well chosen, and the excavation, though rude, was completely impervious to the weather.

PANDOO DUREH.—One small cave is described, in Dr. Wilson's work on the subject, as existing in the Punala fort, but there are larger and more perfect remains of the Boodhist settlement, of which the accompanying sketch and ground-plan are given, on an adjoining hill of the same range, about six miles to the westward.

Situated at the head of a wooded chasm, elevated at a height of 1,000 feet above the plain, and far removed from mortal habitations, seclusion and pure air were fully attained by the recluse votaries at the Pandoo Dureh. The continual verdure must have been soothing to the senses, and favourable for meditative contemplation; and a natural cavern, which enters deep into the hill side, afforded an ample supply of water.

The scarp, which is at the extremity of the ravine, rises about 25 feet in perpendicular height, and various apartments have been pierced throughout along the semicircular face of the rock, the chord across which measures 37 yards.

REFERENCES TO THE GROUND-PLAN OF THE CAVES AT PANDOO DUREH.

CAVE No. 1 consists of a large hall, with a flat roof, divided into irregular squares, by the floor being raised about 6 inches between the columns; has a room at the back, with a raised seat in the centre cut out of the rock, and an open veranda in front.

DIMENSIONS.

No. 1 Apartment.

Side *a*, 27 feet 4 inches; *b*, 12 feet 8 inches; *c*, 28 feet 5 inches; *d*, 12 feet 7 inches; height of roof, 7 feet 5 inches.

No. 2 Apartment.

Side *a*, 28 feet 8 inches; *b*, 7 feet 10 inches; *c*, 29 feet 2 inches; *d*, 6 feet 8 inches; height of roof, 8 feet.

No. 3 Apartment.

Side *a*, 29 feet 2 inches; *b*, 3 feet 3 inches; *c*, 25 feet 11 inches; *d*, 3 feet 7 inches; height of roof, 7 feet 6 inches.

D Door.—Height 6 feet 7 inches; breadth 2 feet 6 inches.

R Room.—Side *a*, 10 feet 1 inch; *b*, 8 feet 4 inches; *c*, 9 feet 8 inches; *d*, 8 feet 6 inches; height of roof, 7 feet 7 inches.

V Veranda.—Side *a*, 6 feet 6 inches; *b*, 15 feet 8 inches; *c*, 9 feet.

CAVE No. 2 consists of three apartments, with a flat roof.

DIMENSIONS.

Apartment No. 1.

Side *b*, 5 feet 2 inches; *c*, 32 feet; *d*, 6 feet 3 inches; height of roof, 7 feet 5 inches.

Apartment No. 2.

Side *a*, 18 feet; *b*, 10 feet 1 inch; *c*, 15 feet 10 inches; *d*, 10 feet 6 inches; height of roof, 7 feet 3 inches.

Apartment No. 3.

Side *a*, 11 feet 9 inches; *b*, 9 feet 3 inches; *c*, 12 feet 2 inches; *d*, 10 feet 5 inches; height of roof, 8 feet 1 inch.

CELLS.

R C No. 3.—The remains of a range of cells. Side *a*, 23 feet 1 inch; *b*, 4 feet; *c*, 35 feet; *d*, 8 feet 6 inches.

C No. 4 cell consists of a room and a veranda.—Side *a*, 8 feet 1 inch; *b*, 5 feet 2 inches; *c*, 5 feet 2 inches; *d*, 4 feet 10 inches; height of roof, 6 feet 2 inches.

D Door.—Height 6 feet; breadth 2 feet.

V Veranda.—Length 8 feet 5 inches; breadth 2 feet 10 inches.

C No. 5 cell consists of a room and veranda.—Side *a*, 8 feet 8 inches; *b*, 6 feet 11 inches; *c*, 9 feet; *d*, 7 feet; height of roof, 6 feet 7 inches.

D Door.—Height 5 feet 4 inches; breadth 2 feet 11 inches.

V Veranda.—Length 7 feet 7 inches; breadth 2 feet 11 inches.

R C Nos. 6, 7, 8.—The remains of a range of cells. Length from *a* to *b* 36 feet.

R C No. 9.—The remains of a range of cells. Length from *a* to *b* 27 feet.

R C No. 10.—The remains of a range of cells. Length from *a* to *b* 19 feet.

T Tank.—Side *a*, 19 feet; *b*, 14 feet; *c*, 19 feet 6 inches; *d*, 3 feet.

— Column.

— Seats cut out in the rock.

REFERENCES TO THE GROUND-PLAN OF THE CAVES AT POWALA.

CAVE No. 1.

A A hall, nearly square, supported on three sides by pillars, with a flat roof.—Side *a*, 34 feet 10 inches; *b*, 34 feet 5 inches; *c*, 34 feet 9 inches; *d*, 32 feet 6 inches; height of roof, 9 feet 3 inches.

B An open passage on three sides of the hall, between the pillars and the cells.—Floor raised 1 foot; roof flat; each side 41 feet long, 4 feet broad; height of roof, 8 feet 2 inches.

C Cells.

No. 1.—Side *a*, 7 feet 9 inches *b*, 7 feet 9 inches; *c*, 7 feet 6 inches.

No. 2.—Side *a*, 6 feet 8 inches *b*, 6 feet 4 inches; *c*, 6 feet 9½ inches.

No. 3.—In ruins.

No. 4.—Ditto.

No. 5.—Ditto.

No. 6.—Ditto.

No. 7.—Side *a*, 6 feet 6 inches; *b*, 6 feet 6 inches; *c*, 6 feet 8 inches.

No. 8.—Side *a*, 6 feet; *b*, 6 feet; *c*, 6 feet 9 inches.

No. 9.—Side *a*, 6 feet 6 inches; *b*, 6 feet 6 inches; *c*, 6 feet 6 inches.

No. 10.—Side *a*, 6 feet 10 inches; *b*, 6 feet 5 inches; *c*, 6 feet 10 inches.

No. 11.—Side *a*, 6 feet 10 inches; *b*, 6 feet 5 inches; *c*, 6 feet 9 inches.

No. 12.—Side *a*, 7 feet; *b*, 7 feet; *c*, 7 feet.

No. 13.—Side *a*, 6 feet; *b*, 6 feet; *c*, 6 feet.

No. 14.—Side *a*, 7 feet; *b*, 6 feet 5 inches; *c*, 7 feet.

No. 15.—Side *a*, 7 feet; *b*, 7 feet; *c*, 7 feet 6 inches.

No. 16.—Side *a*, 6 feet 9 inches; *b*, 5 feet 9 inches; *c*, 6 feet 9 inches.

No. 17.—Side *a*, 5 feet 9 inches; *b*, 5 feet 9 inches; *c*, 5 feet 6 inches.

No. 18.—Side *a*, 6 feet 9 inches; *b*, 6 feet 9 inches; *c*, 6 feet 9 inches.

No. 19.—Side *a*, 5 feet 1 inch; *b*, 4 feet 1 inch; *c*, 5 feet 9 inches.

No. 20.—Side *a*, 6 feet; *b*, 6 feet 9 inches; *c*, 6 feet 6 inches.

No. 21.—Side *a*, 6 feet; *b*, 6 feet; *c*, 6 feet 6 inches.

No. 22.—Side *a*, 6 feet 8 inches; *b*, 6 feet 6 inches; *c*, 6 feet 6 inches; height 8 feet.

No. 23.—Side *a*, 10 feet; *b*, 3 feet; *c*, 10 feet 7½ inches; *d*, 7 feet.

Height of roof, 7 feet.

The exact height cannot be ascertained, a quantity of rubbish having accumulated on the original floor.

D Door, or principal entrance into the cave.—Length 9 feet, breadth 5 feet 4 inches.

W Windows.—Length 4 feet; breadth 5 feet.

V Open verandas.

No. 1 Veranda, in front of the large hall.—Length 35 feet; breadth, side *a*, 3 feet 5 inches; side *b*, 6 feet 6 inches; height of roof, 9 feet.

No. 2 Veranda, in front of the room to the east of Cave No. 1.—Side *a*, 9 feet 8½ inches; *b*, 5 feet 6 inches; *c*, 6 feet; *d*, 5 feet 6 inches.

● Posts.

R Room to the east of Cave No. 1.—Side *a*, 20 feet 5 inches; *b*, 11 feet 9 inches; *c*, 16 feet 2½ inches.

CAVE No. 2.

A Room, supposed to be a lecture-room: has a pulpit or seat for the priest carved out of the rock, marked P.

Dimensions of the Room.—Side *a*, 31 feet; *b*, 13 feet 11 inches; *c*, 26 feet 10 inches; *d*, 16 feet 5 inches; height of roof, 12 feet 4 inches.

D Door or entrance.—5 feet 7½ inches wide; length 7 feet.

V Open verandas.

No. 1, in front of Cave No. 1.—19 feet 5 inches long; 6 feet broad; height of roof, 12 feet 4 inches.

No. 2, in front of cells to the west of Cave No. 2.—Length 16 feet; breadth 4 feet 6 inches.

C Cells.

No. 1.—Side *a*, 3 feet; *b*, 2 feet; *c*, 3 feet.

No. 2.—Side *a*, 6 feet 2 inches; *b*, 6 feet 3 inches; *c*, 6 feet 8 inches.

No. 3.—Side *a*, 6 feet 6 inches; *b*, 6 feet 6 inches; *c*, 6 feet 7 inches.

No. 4.—Side *a*, 9 feet 8 inches; *b*, 9 feet 4 inches; *c*, 9 feet; *d*, 5 feet 9 inches; *e*, 6 feet 6 inches.

T Tanks.

No. 1 Tank.—Side *a*, 10 feet 6 inches; *b*, 7 feet 6 inches; *c*, 10 feet; *d*, 9 feet; depth 7 feet 10 inches.

No. 2 Tank.—Side *a*, 6 feet; *b*, 6 feet 9 inches; *c*, 8 feet 6 inches; *d*, 7 feet 9 inches. Depth cannot be ascertained; a quantity of rubbish has tumbled in.

*

The entrances face the rising sun. There are two large and wide excavations, which even now recede far into the rock. Each includes a cell at the furthest extremity, containing a carved elevation in the centre, and both apartments have been formerly adorned with rude pillars, of which the capitals and pediments alone remain attached to the rock.

One of these principal excavations appears to have been the place of worship, and the other the court of instruction, whilst eight cells for habitation, of various sizes, are cut out on either side.

Great masses of the cliff have given way during the course of time, and now lie at a distance of about 20 feet from the present entrances, leaving a bare vacated terrace. The projecting remains of several pediments of pillars, however, evidently prove that the terrace was at one time also included as a portion of the hive, and although the composite rock is soft, and liable to decay, still the extensive ruin may be attributed rather to the zeal of the Mahomedans, or to the convulsion of an earthquake, which appears to have occurred throughout the Kolhapoor country subsequent to the thirteenth century.

In some places the cliff has decayed nearly to the extremity of the original perforation, and the rude carving alone remains on the exposed face of the rock; but four cells are still perfect, and although there is no inscription to be found in any part, the remains of very rude carving are easily to be traced on the distinguishing Dagbods in the remains of a small dome, and in the capital of a pillar, which bears the form of a ring surmounted by a very perfect cross.

The hill of Joteeba contains similar though smaller cells, and adjoining this sacred eminence the caves of Powala have been cut out, an accompanying ground-plan of which is submitted, containing the measurement of this excavation, consisting of a principal hall of instruction, surrounded by individual cells, a separate place of worship, and reservoir of water. A narrow veranda, formerly supported by pillars, is scooped out along the face of the hill, and the entrance into the principal cave leads from this by a door through the attaching screen of rock, in which also a window has been pierced. On the same range, to the eastward, are some unfinished remains, and at the extremity, near the town of Alte, the Boodhist college has been successively occupied by the Jains and Bramins.

A natural spring on the hill side had been duly conveyed to the grove, and the cloisters were excavated round the tank, which was also cut out of the rock. At the present time, the Boodhist college is occupied as the temple of the Hindoo god Shiva, with a Jain church as a vestibule, which has been further surmounted by a Braminical apex. The individual cloisters have been also transferred into individual shrines for the worship of the Ling. Hindoo buildings are also studded over the face of the hill, and an annual Jutra is held in honour of the trident-bearing deity.

At Kolhapoor, Feralla, and Rangna, similar Boodhist remains have been discovered, but all without inscription. The caves are very rude excavations,

and the pillars have little pretension to any expression of beauty, excepting the simple massiveness of the supporting shaft, and the imitation of the wooden cross beam, which serves as the capital.

There is little doubt that many other caves exist, but the Native, especially the Hindoo, will not willingly render any information he may possess on the subject; and should an accidental discovery be made, the opening is again carefully and speedily closed in the utmost dread and alarm of arousing the displeasure of the venerable Rishee, who is supposed to have excavated his hole many thousand years ago, and to have passed the period in happy undisturbed meditation.

SCARPED FORTRESSES.—The gigantic scarps of the numerous forts exhibit an advancement in art, and a necessity of defence from external danger, and altogether point to a later age than the open excavations in the hill side.

From their number and contiguity, it may be concluded that they were not the work of one individual, who could neither have possessed means of execution, nor ability for use on their completion; but each scarped eminence must have been the eyrie of some petty chieftain, who in ancient days expended the labours of his gatherings in forming the elaborate defence.

The superabundant supply of water, also, which has been artificially obtained, would also tend to establish the fact that these resources were obtained for the wants of a numerous population, and not merely for a small garrison; and although little can be known of their very early history, still the extant inscriptions record this state of society during the twelfth and thirteenth centuries, and mention the names of different petty princes as existing at the same period in different parts of the country.

The works are, however, gigantic, and of very ancient date: there are upwards of five miles of scarp round the fort of Punala, and the forts of Vishalgur, Bowra, Rangna, and Bhodurgur present wonderful remains of the patient energy of a former race.

The earliest authentic record of the Kolhapoor strongholds is found in a copperplate which was discovered at Satara, and bearing the date of 1192, contains mention of the fort of Punala; and subsequent to the year 1204, the commencement of the Mahomedan invasion, Persian inscriptions are extant, detailing in some the date of capture and accession, and in others the minor events of the erection of towers, mosques, and gateways, during the occupation.

But the continual cloud which rests on the summits of the hills during the monsoon, together with the perishable nature of the material, have tended to more than the usual decay to be met with in deserted dwellings. The mark of the chisel, which is still fresh on the caves of Ellora and the scarp of Dowlutabad is here entirely effaced, and grassy mounds alone remain to mark the sites of the former flourishing residences.

TEMPLES.—Kolhapoor has long held a high station for the antiquity of her sacred shrines, and all the current legends state that her present capital origin-

ally existed as a purely religious settlement, of which the great temple, dedicated to Ambabae or Maha Luxoomee, remains to mark the site.

The cloisters which formerly surrounded this great temple now lie buried many feet under the surface of the earth, which appears to have undergone at no distant period a very startling convulsion. Many phenomena, however, favour this legend. The tiny temples are frequently brought to light on any excavation being made, and to this day no well for the purpose of irrigation is allowed within the sacred precincts.

Two of the subterranean temples over which dwelling-houses have been erected are even now much frequented, one being dedicated to Kartik Swamee and the other to Khundoba; and in further support of the oral tradition, that in olden times the dreary jungle was only marked by a multitude of holy temples and holy pools, the spring frequently gushes out when digging for a foundation. Stone slabs, covered with strange figures and ancient inscriptions, are found at a depth of upwards of 15 feet from the surface; the heights of the same wall of the great temple are unequal at different places, and the ground level is totally altered and destroyed.

The convulsion which altered the ancient aspect of affairs must probably have been effected by an earthquake, slight shocks having occurred again during the year 1853. Many geological facts also support this opinion, in the upheaving of small elevations in the neighbourhood, in the curious and singular arrangements of the clay about the locality, and in the existence of the old bed of the river Punchgunga, at an elevation of at least 70 feet above its present level, which was discovered whilst digging for a foundation in the year 1849, and which is clearly evinced by the broad strata of small pebbles, perfectly and smoothly polished, evidently through the action of running water.

Little information can be obtained regarding the founder of the great temple, or of the period of its existence; but two facts are universally acknowledged—that during the religious persecutions carried on under the Mahomedan rulers, the present image was concealed in a private dwelling-house, and that it was established in the present temple only 133 years ago, by Shidojee Hindoo Rao Ghorepuday, one of the ancestors of Himmud Bahadoor, who was deputed for the purpose from Punala, the seat of Government, to Kolhapoor, by Sumbhaje Maharaj, the son of Raja Ram; and there is a Sunud extant which was at the time passed by that prince, of grants assigned by him for the expenses of the temple.

In this document it is stated, that although, during the Beejapoor government, there existed many votaries well able to replace the image, Prince Sumbhaje has alone the merit of re-establishing it in its ancient temple.

The fact, however, of the great temple being the ancient shrine of Maha Luxoomee, may be doubted, at least for any lengthy period antecedent to the Mahomedan persecution.

The upper works of the temple, which are ascribed to the zeal of the Shunkuracharya of Sunkeshwur in later days, have certainly converted the edifice into a Hindoo temple ; but the symbol of the god Gunputee, which is the most important distinction of Braminical worship, cannot be distinguished in any part of the building. There are many figures on the walls in the Boodhistic attitude of prayer, one of which, moreover, is completely naked ; and the style of architecture altogether evidently proves that the temple was originally a Jain church.

The Jains assert that not only the temple, but the image itself, originally belonged to them, and that the name of their goddess was Pudmavutee.

The dates of certain Canarese inscriptions also testify to the existence of Jain superiority for a century anterior to the earliest discovered Sanscrit inscriptions relating to the victorious Hindoo princes, and it would appear natural that the conquerors, to gratify their animosity, and give their triumph a wider range of notoriety, should destroy all traces of the former religion, and appropriate for the use of their own images the temples of their vanquished enemy.

The stone slabs bearing the inscriptions above alluded to were discovered under ground in different situations. The Canarese portions commemorate grants by Gunduraditya and his cotemporaries in the eleventh century of the Shalivahan era, whilst the Sanscrit inscriptions relate only to Yadow Narayen, and his immediate successors of the Yadow family, as donors in the twelfth century of the same era.

Few of these ancient inscriptions, however, are now entirely perfect : the dates on many are unfortunately either wanting or destroyed, and are of comparatively little use as chronological aids ; but it would appear evident that the whole of this tract had been during the eleventh century in Boodhist possession, and all the ruins and remains of the various temples that have been hitherto discovered throughout the country further indicate one particular style of architecture which is considered as peculiar to that worship.

The name of Maha Luxoomee is, however, mentioned in one Sanscrit inscription, and from this it may be inferred that the present worshipped image of the goddess has been in existence for a period of about five centuries. The temple is of a cruciform shape, and belongs to the class designated Hemar puntee, notorious throughout Southern India for obscurity of interior and continuous rows of pillars. The length of the foundation from east to west is 144 feet ; and from north to south 157 feet ; the height of the dome is 36 feet, and 42 attendants are continually on duty.

The annual revenues of the shrine, which were stated in former years to have amounted to Rs. 60,000, have now dwindled down to about Rs. 4,000 ; but pilgrims from distant parts of India still resort in crowds to the spot, and voluntary contributions are daily received in support.

During the Nuoratra holidays, various ceremonies are performed. On the

15th Vyshakh a brazen image of the goddess is carried in procession through the town, in a triumphal car. On every Friday it is conveyed in a palanquin round the enclosure, when a salute is fired. On three occasions during the year the outside roof is thoroughly illuminated, and once every year attended by all the inhabitants of the town. The image is carried to the small temple of Temblae, in the immediate vicinity, where the customary offering to the deity is made by a virgin daughter of the Patel of Bowra.

The great bell of the temple bears the following inscription, and must have been obtained from the Portuguese about the year A. D. 1739 :—

AVE MARIA GRATIA PLENA DOMINUS TECUM.

Hail! Mary, full of grace; the Lord is with thee.

I H S

JOTEEBA'S HILL.—At a distance of five miles from the town, the hill of Joteeba rises from the plain in the form of a truncated cone to a height of about 1,000 feet, and although disconnected individually by a deep ravine, it forms a portion of the Punala chain, which stretches from the great Western Ghauts towards the river Krishna.

From time immemorial, this eminence has been celebrated for great sanctity, and a labyrinth of temples and gateways marks the misguided zeal of its numerous devotees. Large masses of stone and mortar have been heaped together by all the chiefs of the surrounding country. Pilgrims flock to the great festivals from a distance of 700 miles. A partial attendance from the immediate vicinity is obligatory on every Sunday and full moon, and here the presiding deity is said still to present tangible proofs of his presence; and it is currently believed that Joteeba, the protector of the reigning family of Sindia, was in a state of continual perspiration during the entire period of the last British campaign against Gwalior.

The location is known under the several names of Rutnageerry, Kedar Ling, Kedar Nath, and simply Nath; the first being derived from the demon Rutnasoor, and the last three from attributes and designations of Shiva, who is the principal object of worship on the hill.

The ancient tradition of the place runs that in olden times the two demons Kolhasoor and Rutnasoor, who tyrannized over the Deccan, were defeated and killed in this their stronghold, by Nath or Joteeba, the nominal son of the sage Powngud, but who was an incarnation of Shiva, and who, with the goddess Maha Luxoomee, had been granted to the prayers of the distressed and dispossessed rulers of the Deccan.

The downfall of the demons was followed by universal happiness, and votaries have ever since annually assembled in large numbers, on the 15th of the month Chytra, to hold rejoicing in commemoration of the victory.

The erection of the first temple is ascribed to a notable ascetic, Saya Nowjee, who is said to have built a shrine for Joteeba, but no inscriptions have been discovered to fix the date of his existence; and although it is probable that the image itself, which is at times worshipped in a state of nudity, may have belonged to the former religion, the temples and buildings cannot claim a greater antiquity than a century and a half.

The upper part of the hill is covered with groves of old trees, and in modern times the reigning family of Sindia have been the great contributors to the numerous shrines which have been built and repaired at a considerable expense, and an annual assignment has been fixed for the purposes of ceremony and entertainment.

Besides a host of small temples, gateways, stone canopies, resting-places for pilgrims, wells, and tanks, there are three principal temples in one enclosure dedicated to Shiva, whose emblem, the Ling, is prominent throughout. The buildings are generally composed of a fine description of blue basalt. In many parts the style of architecture, which is strictly Hindoo, is highly ornamented, and several of the sculptured figures and screens are covered with brass and silver plates.

The annual revenues attached for the support of the entire establishment amount to upwards of Rs. 12,000, of which His Highness Sindia pays Rs. 7,500. Twenty-eight wayfarers are daily fed at the gateway; ten Bramins are in continual prayer; nor is the stud of horses and elephants wanting to swell the grand procession which takes place at the annual Jutra.

The image of Joteeba is of a soft black stone, and that of his wife Emaec consists of a simple unshaped fragment, smeared with red lead, which is kept in a temple at a distance of a few hundred yards from the enclosure, and where, during the days of rejoicing, a brass image of Joteeba is carried, amidst the shouts of 20,000 votaries, for the annual celebration of his marriage.

The ceremony is concluded by placing between them the Sika and Kutar, the dagger and insignia of authority, and this would appear to appertain rather to the customs and rights of the Chutree, than to any form at present pertaining to the Braminical caste.

But in Kolhapoor a very great impartiality exists in the objects of veneration and worship, and Hindoos may be daily seen celebrating the Mahomedan feasts and festivals equally as their own peculiar holidays.

NURSOBA'S WAREE.—This Waree, which is situated at the Sungum of the Punchgunga and Krishna rivers, is celebrated for its holiness throughout Western India, and is resorted to as a place of pilgrimage by multitudes from every part of the country.

The principal object of attraction is the temple dedicated to Nursinhu Suruswatee, a holy being, an incarnation of Duttatraya, and one of the twelve supposed immortal beings of the Hindoo mythology.

Nursinhu flourished about 300 years ago, and resided at Gokak, but it is believed that he performed daily ablution on the bank of the Krishna where the present village stands. A Bramin of Sherole, who remained in daily attendance on the saint, is said at the time of his disappearance, and according to his instructions, to have placed a stone impression of his foot-marks on the spot where he offered his daily prayers, and to have instituted worship in honour of him.

This deity is said to possess at the present day miraculous powers, and is believed to afford immediate relief to people who are labouring under the influence of evil spirits, either in mind or body. Numbers continually remain on the spot to undergo the penances dictated by the priests, who avail themselves of every opportunity to fleece the credulous pilgrims.

A great fair is held annually in honour of the deity during the months of February and March, when a large assemblage is gathered together of about 50,000 individuals, and a brisk trade carried on, chiefly in cloth and copper vessels.

The remaining temples, which bear an undoubted appearance of antiquity, are situated at Azra, Raybaug, Kedrapoor, and Berud: they are of smaller dimensions than those already described at Kolhapoor, but evidently belong to the same school of architecture, and to the same era of construction.

To this day the greater portion of these buildings present no symptoms of decay, and their massive structure may have preserved an existence through many ages previous, as they have remained intact during the six centuries subsequent to the date referred to in the Halukanadi inscriptions which have been discovered in their immediate vicinity.

The territory throughout teems with religious edifices, and every village is most amply supplied with temples, endowed with all the appliances in wood and stone requisite for the purposes of the grossest superstition.

Few, however, possess any great notoriety or sanctity, which latter quality has been absorbed by Ambabae, Joteeba, and Nursinhu: they are comparatively of modern formation, and have been built within the last 300 years, and the following list contains the only deities who, among 10,000 shrines of Kolhapoor, hold any pretension whatever to a higher estimation over the ordinary ranks of Hindoo mythology.

TEMPLES OF TEMBLAEE.—The three temples dedicated to Temblae are situated on the east of Kolhapoor, at a distance of about three miles from the town. This goddess is believed to have been in existence for upwards of 1800 years, although the present temples were constructed about forty years ago by the late Akaram Baba Yadow, Superintendent of Public Works in the service of the Kolhapoor Government.

The sacrifice of a he buffalo is offered before the goddess every third year, but on the 5th of Ashwin Shood of each year a fair is held in honour of the

goddess. An idol of Ambabae is placed in a palanquin, and carried in procession to the hill during the day-time, and a Kolba (pumpkin) is afterwards cut to pieces before the goddess by a virgin, in commemoration of the destruction by her of a wicked giant named Kolhasoor. Besides the Raja and his retinue, upwards of 15,000 individuals assemble on the occasion.

TEMPLE OF MAHAKALEE, goddess, in the new Boodhwar street, Kolhapoor.—This building is dedicated to one of the guardian goddesses of the town, and is believed to be of ancient date. Goats are frequently sacrificed by the votaries for the accomplishment of wishes and desires; and fairs are held in honour of the goddess during the months of March, April, and July, principally attended by the lower orders of the people.

Previous to the introduction of the British superintendency a sacrifice of a he buffalo was offered before the idol at intervals of two or three years: the practice has been latterly discontinued.

TEMPLE OF PHEERUNGEE, *alias* PRUTIANGIRA, goddess, situated between the Mungulwar and new Boodhwar streets, in the town of Kolhapoor.—This temple is believed by the inhabitants to be one of the most ancient of Kolhapoor, and the water of the tank called Powlay Tulao, immediately in front, is considered as very holy.

Offerings of flour, salt, turmeric, Koonkoo (a red powder prepared from turmeric), and oil, are made in abundance to the idol, which is believed to afford relief to children suffering from itch.

The children labouring under this malady are first taken to the goddess, and the offerings presented; they are then washed in the tank Powlay Tulao. But the goddess is a favourite chiefly of the lower classes of the Hindoos.

In former days, buffaloes were offered in sacrifice, but the practice has been latterly discontinued, and the offering of goats substituted.

TEMPLE OF WITOBA, near the Pudmala gate, in the town of Kolhapoor.—This temple also is one of the ancient shrines of Kolhapoor. Fairs are held in honour of the god on the 11th day of the Hindoo months of Ashad (June and July) and Kartik (October and November), and which have been well attended for the last twenty-five years.

SUBTERRANEAN TEMPLES.—In the town of Kolhapoor there are several subterranean temples, which are supposed to have been overwhelmed by an earthquake about the fourteenth century, and have been gradually brought to notice whilst digging for water or foundations.

The foundations of these temples dip below those of the surrounding buildings from 2 to 15 feet. Pathways have been cut down to the thresholds, and to all appearance the lines of the buildings are straight and

unaffected by the former convulsion ; but the domes have been of late years renovated, and masses of chunam plastered in every direction to conceal defects.

The materials are stone and chunam, and in one the pavement consists of two enormous blocks of basalt. The temples are not of any large dimensions, varying from 10 to 25 feet in length and breadth, and from 15 to 30 in height.

The idols are still worshipped, and daily Pooja is offered to Mahadeo, Kartik Swamee, and Khundoba, as of old ; and the very peculiar locality into which they have been summarily forced does not appear to have in any way affected the respect paid to the odour of their sanctity.

A temple dedicated to the goddess Yellumma is situated on the east side of the city. This is a favourite goddess with the lower classes of Hindoos, and particularly with women, who make frequent vows to her, the non-fulfilment of which is regarded as originating diseases, or other bodily sufferings. The women, who wear a necklace of white beads as a sign of their devotion to Yellumma, do not marry, and lead a very immoral life ; and even a married woman when becoming Jokteen is required to obtain a divorce before following the precepts of Yellumma.

As the principal portion of the worshippers are of the Lingayet persuasion, who are averse to the destruction of animal life, no sacrifices of goats, &c. are offered. *

Formerly it was customary in Kolhapoor to perform the sacrifice of the he buffalo in the month of Ashad (June-July), but of late the time has been altered to Magh (January-February), or Falgoon (February-March).

Tuesday is the favourite day on which the sacrifice is offered to the Goddess Murgae, near Temblae. A young he buffalo, intended for the purpose, is previously set at liberty for a period of two or three years, to become fat and plump, in which state he is considered a fit oblation.

On the morning of the appointed day, the animal is anointed with oil, and washed in hot water. Afterwards red lead, the paste of sandal-wood, Goolal (red powder), and Koonkoo (a red substance prepared from turmeric), are applied to his body. At about 3 p. m. a cut is made with a knife on the right thigh, so as to bring out the blood profusely. The animal is then led around the city or village to a certain distance, his path being marked by the drops of blood issuing from the wound ; and toddy, Ambil, (conjee prepared from Nachnee), baked grain, and pieces of lemon and cocoanut, are thrown about by the party, consisting of the village officers and other ryots escorting the animal.

At sunset the animal is again brought before the goddess. His legs are tied, his head cut off with a knife, and his bones are broken with an axe. The right fore-leg is then separated, and thrust into his mouth, and the head in this

state is placed in front of the goddess. The white flesh is taken out of the body, and put on the head; a lighted lamp is also placed between the two horns, and loud music is then played incessantly.

The Mahars afterwards boil the flesh of the palate with rice, and make an offering of the mess to the goddess, and the lamp is allowed to burn until the following noon, when another similar offering is presented. The heads and carcases are then removed by the Mahars.

Two earthen images of Luxoomee and Jugloba in dress are placed beside the goddess, and the proceeds of the worship are taken by the potters. On the third day after the sacrifices the two images are carried on a cart to the skirts of the town or village, and the expenses attending the sacrifices are defrayed by Government, with a view to ward off the calamities incidental to cattle and crops.

TEMPLES AT ALTE.—These temples, which have passed successively from the possession of the Boodhists and Jains, are now dedicated to Shiva and Alum Prubhoo, and the latter is celebrated for the brilliancy with which the lamps emit the constantly lighted flames.

This is also one of the few places in Western India where the devotees of Shiva believe they can immolate themselves in the vestibule of the temple under a certain prospect of entire happiness in a future state.

Within the last eight years the victim has been more than once found in the morning weltering in his blood, with the sacrificial^d knife lying beside him, and the document detailing the circumstances of his birth, and his dedication to this sacrifice in early life.

TEMPLES AT SHEROLE.—There are a few very sacred temples in excellent preservation at Sherole, and one especially called Bhoja Putra, and dedicated to Duttatruxya, an incarnation of Shiva. The temple contains only a simple stone slab, indented with a foot-mark, and a stone vessel is preserved, which is said to have been used by the god, who formerly resided in person under the very roof.

COPPERPLATES AND INSCRIPTIONS.—The remaining copperplates are few, and now nearly illegible, the characters being much effaced; but the inscriptions on the various stone slabs have been decyphered. They are in Canarese, Sanscrit, and Persian, and afford a glimmering on a portion of the ancient history of the country.

The Canarese refer to the era of the twelfth century, the Sanscrit to that of the twelfth and thirteenth centuries, and the Persian commemorate the presence of the Moslem from the thirteenth century.

A collection of these inscriptions has been made after very considerable trouble, and decyphered, chiefly through the zeal and perseverance of the Nazir Venayek Rughoonath Kaley.

The difficult task has been ably executed, and the pity is that the work had not been attempted at an earlier period, previous to their mutilation ; for had the date been complete and perfect, these inscriptions would have proved highly interesting old records. Still a glimmering is to be obtained on a very dark period of ancient history, and from a general survey certain results may be reached.

The following table gives the date and substance of twenty-three inscriptions which have been discovered, in Canarese and Sanscrit ; and the copies of original inscriptions, together with their translations, are appended.

Table of Ancient Inscriptions discovered in the Kolhapoor

| Number. | Place where the Inscription was found. | Character of Inscription. | Language of ditto. | Number of Letters in the Inscription. | Date of Inscription. | | Dimensions of the Stone. |
|---------|----------------------------------------------------|---------------------------|--------------------|---------------------------------------|----------------------|----------------|--------------------------|
| | | | | | Native Era. | Christian Era. | |
| 1 | The Mosque of Baboo Jumal. | Old Balbodh. | Sanscrit. | | 1032 | 1110 | |
| 2 | Herley, Peta Kurweer .. | Old Canarese. | Old Canarese. | 683 | 1040 | 1118 | |
| 3 | The Jain temple near Friday Gate, at Kolhapoor. | Ditto. | Canarese. | | 1058 | 1136 | |
| 4 | In the Jain temple near Friday Gate, at Kolhapoor. | Ditto. | | | 1064 | 1142 | |

Territory, with translated Substance in English.

| Name of the King. | Dynasty. | By whom granted. | Substance. | Remarks. |
|-------------------|----------------------------------------------|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| Gunduraditya Deo. | Jeemootwahan Dynasty. | Gunduraditya Deo. | In the year 1032 (A. D. 1110), on the occasion of an eclipse of the moon, on the 15th Vyshakli Shood, the prince granted in charity a lot of land in Moujé Koord, in the Meerunjee (now called Meeruj) Desh, to Someling Bhut, for the maintenance of Brahmias. | |
| Ditto. | Ditto. | Ditto. | In the year 1040 (A. D. 1118), on the occasion of an eclipse of the moon, this prince, at the suggestion of Mogal-devec, granted in charity to Acharya Shantee Deo, of the Kolhapoor Bustee, a lot of land, and deposited a certain amount of money at interest, for the temple of Moujé Herley. | |
| Nimbraj, a Jain. | | Nimbraj, a Jain. | On Kartik Wud 5th, Shuké 1058, Monday, the Prince Nimbraj, who called himself a servant of Gunduraditya Deo, of the Jeemootwahan dynasty, ordered all the Shetres and Mahajuns of the country to levy certain customs in kind, &c. on merchandize passing through the Kolhapoor and Meeruj Nakas, and to make it over to Noorun Swamee, for the temple built by him near Kuodee Gole village, for the timely worship of the idols, the repairs of the temple, and the maintenance of the priests. | |
| Vijiaditya Deo. | Shilahar branch of the Jeemootwahan Dynasty. | Vijiaditya Deo. | On the occasion of an eclipse of the moon, which occurred on Monday the 15th of Magh Shood, Shuké 1064 (A. D. 1142), this king, who was reigning at Walwud, granted to Mankia Nundee Pundit Deo a field and a house situated in the village of Hirveen Herley, for the offering of worship to Purushnath in the Jain temple in the latter place, &c. &c. | |

| 6 | On the bank of the Koteerth tank. | Ditto. | Old Canarese. | 345 | 1101 | 1179 | Guz 1, by 13 inches. |
| 7 | Store-house of H. H. the Raja. | Ditto. | Ditto. | 1451 | 1109 (Bhadrupud Wud 30th, Friday.) | 1187 | 19 by 18 inches. |
| 8 | Wall of the house of Anacharya Pundit Rao, at Kolhapoor. | Old Balbodh. | Sanscrit. | 938 | 1112 and 1114 | 1190 and 1192 | |

| Name of the King. | Dynasty. | By whom granted. | Substance. | Remarks. |
|-------------------------|-------------------------------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| Vijaditya Raja, a Jain. | Shilahar. | Vijaditya Raja. | This king, while reigning at Walwud, granted to Arhunundee Sidhant Deo 10 Dunds (each Dund equalling 10 Hathas) of land, and a house situated in Mudloor, for the defrayment of the expenses of the subsistence of the priests attached to the Jain temple at the latter place, of the performance of eight kinds of worship to the idol in it, and of repairs to the building. | |
| Bhojdeo, a Hindoo. | | Bhojdeo, a Hindoo. | While King Bhojdeo, who was a devout worshipper of the emblem of Shiva at Koteteerth, was reigning at Walwud (probably the modern Wulewday), he erected, in the year Shuké 1101 (A. D. 1179), a temple for that deity, and assigned a certain quantity of land, situated near the Koteteerth, for the expenses attending the worship of eight kinds to be offered to that god daily, &c. | |
| Bhoj Raja, a Jain. | Of the Jee-mootwahan Dynasty. | Bhoj Raja. | This king, while reigning at Kolhapoor, granted in charity to Koomarkirtee the village of Korumbey, in the Meerunjee Desh, now called Meeruj, bounded on the south-east by Kurumbee, on the north-west by Koo-binoor, and on the north-east by Sadrree, for the repairs of the Jain temple at Kolhapoor erected by Pradhan, the disciple of the said Koomarkirtee, and for the subsistence of mendicants. | It appears from this inscription that two kings, named Chole and Singuldeo, were contemporaries of Bhoj Raja. |
| Bhoj Raja. | | Bhoj Raja. | Bhoj Raja granted to his dependent Bramins, Aditya Bhut and three others, a lot of 550 Katces of batty ground in the village of Kopurwad, in the Eedhur country, and a house, for the defrayment of the expenses attending feasts to Bramins, the offering of worship to the idols of Umrooteshwur, and Ooma Muheshwur (Shiva and his consort), the supply of food to be offered three times a day to Maha Luxoomce, and the making of repairs to the Muth erected by his protégé Lokun Naik. This grant was made | |

| | | | | | Native Era. | Christian Era. | |
| 9 | In the Jain temple, at Moujé Raybaug. | Old Canarese. | Sanscrit. | | 1124 | 1202 | |
| 10 | In the temple of Kopeshwur (Shiva), at Khedrapoor, Peta Sherole. | Balbodh. | Ditto. | | 1135 | 1213 | |
| 11 | On one of the pillars of the portico of the temple of Gunpute, in the compound of the temple of Ambabace. | Old Balbodh. | Ditto. | 411 | 1140 | 1218 | Guz $\frac{3}{4}$ by $\frac{1}{2}$ Guz. |
| 12 | On the wall of the temple of Rameshwur, near the Rowneshwur tank. | Ditto. | Ditto. | 89 | 1157 | 1235 | Guz $\frac{1}{2}$, by 8 inches. |
| 13 | Near the western gate of the temple of Mahakalee, in the large temple of Ambabace. | Ditto. | Ditto. | 385 | 1158 | 1236 | 18 by 13 inches. |
| 14 | This stone is kept in the palace. | Ditto. | Ditto. | 335 | 1172 | 1250 | Ditto. |

| Name of the King. | Dynasty. | By whom granted. | Substance. | Remarks. |
|----------------------------------|----------------|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | | for securing the prosperity of his kingdom. Kulian Naik, the son of Lokun Naik, having obtained a gift of two Wutuns, bestowed the same in charity on the said Bramins in 1114, Shalivahan era. | |
| | | | This inscription contains the genealogy of a very famous prince, named Luxoomce Deo, who is represented to have undertaken expeditions against the countries called Shoke, Malwa, Chole, and Guzerat, the rulers of which were afraid of him. | |
| Shingun Deo, a Hindoo. | | Shingun Deo. | This prince assigned, on Monday the 30th Chytru Wud, Shuké 1135 (A. D. 1213), the village of Koondulrawur, situated in the Meeruj district, to the idol of Kopeshwur. | |
| Tylim, a Hindoo. | Yadow Dynasty. | Tylim Raja. | In Shuké 1140 (A. D. 1218), King Tylim caused a gate to be erected in front of the temple of the goddess Ambabace of Kolhapoor. | |
| Shingun Deo, a Hindoo. | | ... | This inscription is incomplete, but it appears that in the year A. D. 1235 the King Shingun Deo reigned at Kolhapoor, by the blessing of the goddesses Ambabace and Mahakalee. | |
| Juyuseel Raja. | Yadow Dynasty. | Daroo Naik. | During the reign of King Juyuseel, Daroo Naik, on the occasion of an eclipse of the moon, on Monday the 15th of Magh Shood, Shuké 1158 (A. D. 1238), remitted the duties due to Government from a place not ascertainable, and gave 25 bullocks for securing the performance of worship, &c. to the idol Soowurn Jaleshwur. | The word <i>Juyuseel</i> means victorious: it may therefore either be the name of the king, or an adjective qualifying it. Some letters after the word Juyuseel have been destroyed. They, it may be presumed, contain the name of the king. |
| Yadow Narayen, alias Konher Deo. | | Kamaya. | During the reign of the King Konher Deo, Kamaya remitted the customs leviable in the village of Koord, which had been originally bestowed in charity in honour of Ambika, the wife of Shree Gowtamaree Keshow Deo. | |

| Number. | Place where the Inscription was found. | Character of Inscription. | Language of ditto. | Number of Letters in the Inscription. | Date of Inscription. | | Dimensions of the Stone. |

| 15 | On the rampart of the Wuroonteerth gate. | Old Balbodh. | Sanscrit. | 1,285 | 1194 | 1272 | 1 Guz by $\frac{3}{4}$ Guz. |
| 16 | The portico of the temple of Shideshwur, at Moujé Shidnorlee, Prant Kagul. | Ditto. | Ditto. | | 1199 | 1277 | |
| 17 | Temple of Sheshashayee, on the east side of the portico. | Old Balbodh, and Old Canarese. | Old Canarese. | 129 | | | |
| 18 | Jain temple at Kusba Saogaon. | Old Canarese. | Ditto. | 290 | | | |
| 19 | The portico of the temple of Sheshashayee, in the compound of the temple of Ambabace. | Ditto. | Ditto. | 168 | | | |
| 20 | Ditto ditto. . . | Ditto. | Old Canarese, mixed with Sanscrit. | 166 | | | |

| Name of the King. | Dynasty. | By whom granted. | Substance. | Remarks. |
|-------------------------|------------------------|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| Shingun, a Hindoo. | | Ramdeo, King. | During the reign of Shingun, a very powerful and brave King, Ramdeo Raja, of the Yadow family, who brought glory to that dynasty, granted, on the occasion of an eclipse of the moon, on the 15th of Magh Shood, Shuké 1194, a village called Geereewulee, situated in the Toolmee Ghole (Turf), to his spiritual guide Wishwaroop, for the performance of Pooja (worship) to Brumheshwur (near Wuroonteerth), and for feeding religious mendicants, &c. &c. | . |
| The son of Shingun Deo. | | The son of Shingun Deo. | This prince, whose name cannot be ascertained, in consequence of the destruction of certain letters in the inscription, at the suggestion of Gund Naik, relinquished, on the occasion of an eclipse of the moon, on Tuesday the 15th of Shrawun Shood, Shuké 1199, the duties leviable on goods, manufactures, and childless persons of Shidnorlee, which had been bestowed in charity by Ramchundru Deo to Bramins. | . |
| Nagarjoon. | | | It is difficult to make out the exact purport of this inscription; but, from the parts which can be decyphered, it appears that a king bearing the name of Nagarjoun flourished at the time. | This inscription is incomplete; but from the ancient characters used, it would seem to be of very ancient date. |
| | | Bummun, a Jain. | Bummun, who was the disciple of Kumak Shantee, the disciple of Sydhantik, the son of Wudeeyoogun, built a temple at Saogon for securing the perpetual existence of the Jain religion. | This inscription would seem to have some connection with those found at Konoor and Koguo-lee. It contains no date, nor the name of the reigning king. |
| Nimb Raja, a Jain. | | | This king, who was a Jain, is described to have countenanced that religion. | It does not appear that this inscription was intended to record a grant. |
| Gunduraditya Raja. | Jeemoot-wahan Dynasty. | | This king is described as countenancing the Jain religion, which he professed. | Ditto ditto. |

| Number. | Place where the Inscription was found. | Character of Inscription. | Language of ditto. | Number of Letters in the Inscription. | Date of Inscription. | | Dimensions of the Stone. |

| | | | | | Native Era. | Christian Era. | |
| 21 | The portico of the temple of Sheshashayee, in the compound of the temple of Ambabae. | Old Canarese. | Old Canarese. | 158 | | ... | |
| 22 | Honoor, Prant Kagul .. | Ditto. | Sanscrit, mixed with Canarese. | 87 | | | |
| 23 | In the temple of Ambabae, at Kolhapoor. | Balbodh. | Sanscrit. | ... | | | |

| Name of the King. | Dynasty. | By whom granted. | Substance. | Remarks. |
|-----------------------------------|--------------------------|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|
| Nimb Raja, a Jain. | | | This king is described as a very accomplished and handsome prince. | It does not appear that this inscription was intended to record a grant. |
| Bullal Deo, and Gunduraditya Deo. | | Bullal Deo, and Gunduraditya Deo. | These two kings assigned a field at Veenoor (now called Honoor) in charity to the Jain temple built by Bumgaoond at that place. | |
| Somedeo, a Hindoo. | Of the Chalooka Dynasty. | Somedeo. | This prince, at the suggestion of his spiritual guide, Shree Shumbhoo, granted the village of Koombhar for the performance of the worship of Shree Maha Luxoomec (probably of Kolhapoor). | |

From the year 789, the latest date of any current tradition which ascribed the possession of the country to one powerful monarch, the succeeding period of 200 years, and until about the year 1028, is entirely blank, when we find by an inscription found at Roybaug, bearing date 1202, that a dynasty was then established on the western part of the principality, which must have extended during 170 years, and must consequently have been in existence early in the eleventh century.

In the event of information being hereafter obtained from other quarters similar to what has been collated at Kolhapoor, the fact might be fully established whether the names inserted in this inscription are identical with those mentioned in Vol. III. of the Journal of the Literary Society of Bombay, page 395, or whether the names appertain to an existing branch of the same dynasty in Kolhapoor, who from their connexion had retained the family names.

The probability certainly is in favour of the latter fact ; and further, that in consonance with custom, the high-sounding titles of the original family have been preserved by these Kolhapoor princes, who really did exist, although as petty rulers of a country divided into very minute compartments.

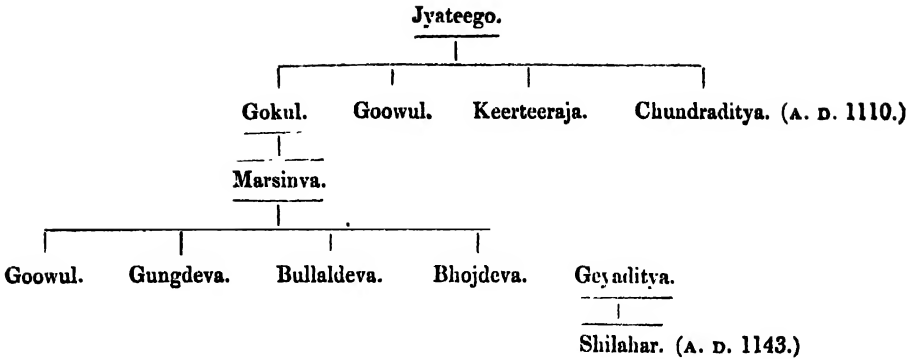

From the remaining inscriptions it would appear that this portion of Maharashtra was ruled by sundry Jain chiefs in the latter end of the eleventh century, and that in the close of the twelfth century (A. D. 1192,) it was subject to a powerful chief, who, according to a copperplate inscription found at Satara, reigned over the whole tract extending from the Mahadeo range north of Satara to the river Hurukasee, and including the southern tract of the Konkun.

The reduction of his power, according to the oral tradition mentioned by Captain Grant Duff, by a Raja named Shingun, seems to be well supported by the Sanscrit inscription now found in the temple of Kopeshwur, bearing the date 1214, and stating that the building was erected by the powerful and courageous Shring Deo, whilst a subsequent sub-division of rule appears to have taken place, and remained in existence until the Mahomedan conquest.

It further appears from the extant inscriptions, that the present principality of Kolhapoor was at that period divided into four portions, Roybaug in the east, Berud in the centre, Khilna, afterwards called Vishalgur, in the west, and Sunkeshwur in the south, all forming the seats of independent princes, the names and dates being given as follows :—

1st.—*Roybaug.*

Founder Jeemootwahan Shilahar.

2nd.—*Berud*, which included Kolhapoor and Punala.

| | | | | | | | | | |
|------------|----|----|----|----|----|----|----|----|------|
| Tylim.. | .. | .. | .. | .. | .. | .. | .. | .. | 1218 |
| Ramdeo. | | | | | | | | | |
| Nagarjoon. | | | | | | | | | |
| Shingun | .. | .. | .. | .. | .. | .. | .. | .. | 1235 |
| Juyuseel | .. | .. | .. | .. | .. | .. | .. | .. | 1236 |
| Ramdeo | .. | .. | .. | .. | .. | .. | .. | .. | 1272 |

There are many ancient ruins at *Berud*, which is situated on the Punch-gunga river, about eight miles from Kolhapoor, and tradition assigns its last occupancy to Juyuseel, who transferred the seat of Government to Kolhapoor, most probably after the great earthquake, which must have occurred between the thirteenth and fourteenth centuries.

A curious monolitto, of a circular form, measuring 18 feet in circumference, but without inscription, is inserted in the vestibule of the old Boodhist temple at *Berud*. There are also the remains of a palace and other buildings, and a hill spring is still in preservation, from whence it is said that during the reign of the Adil Shah dynasty the water was daily dispatched to *Beejapoor*; but the ruins are scanty, and the location never could have been of any very great extent.

3rd.—*Khilna or Vishalgur*.

The existence of Prince Bhoput, about the year A. D. 688, is the subject of tradition, and that of Bhoj, in the year A. D. 688, is proved by an extant Persian inscription, which has been preserved from the effects of the weather. The humidity of the atmosphere may also have effaced any other stone records, had they existed, which is hardly probable among a race notorious to the present day as being less advanced in civilization than their neighbours.

4th.—*Sunkeshwur*.

The inscriptions at *Sunkeshwur* have unfortunately been greatly mutilated, but the following names are preserved as the members of the dynasty which were in power subsequent to

Shingun Deo, 1214.

Kurnadeva.

Nroosinva (Cage of Thunderbolts).

Wetoogeedeva.

Someshwur.

Somedeva.

The remains left by the Mahomedans during the period from the twelfth to the seventeenth century pertain rather to works of absolute necessity, for the purposes of their defence or their religion, than to works of pleasure and art, and evince the occupation of an outlying province by the lieutenant with his garrison, rather than the residence of the governor with his court.

In the hill forts, the chief site of occupation, the battlemented wall and the ponderous gateway, the tiny mosque and the Eedga, are still in existence, but no permanent palace was erected, and few vestiges remain of any description whatever on the plain country.

The earliest Persian inscription, which was found in Vishalgur, bears the date of A. D. 1234, in commemoration of the capture of the fort by the Mahomedans under Mulik Rahim, who from another inscription, dated sixty years later, appears to have enjoyed during life a high odour of sanctity, and was canonized after death, miracles being wrought through invocation of his name at the shrine.

An inscription of the same period (A. D. 1247) shows the attention immediately given by the Moslems to strengthening the outworks. Other inscriptions of much later date give the arrangements made at Beejapoor for the division of certain mosque fees, and the remaining Sunuds bear the date of A. D. 1600, and pertain to the entertainment of the fort officers, and are interesting only as containing information of the current coin of the realm, which at that period consisted of Moans equal to Rs. $3\frac{1}{2}$, and Saharees equal to 3 annas, and showing the annual pay of a Fort Treasurer to be Rs. 175, and of a Fort Karkoon to be of the same amount.

The Punala inscriptions are more numerous, but of later date, and merely, according to custom, commemorate the erection, from A. D. 1311 to A. D. 1607, of sundry gateways and towers, and the construction of tanks and wells.

Although the vanity of the nation is highly flattered by the terms lavished in favour of its wonderful sanctity, by the author of the Kurweer Mahatma, where every river, hill, and stone, is proved to be more sacred than those in the environs of any other locality in the world, and where Kolhapoor itself weighs in the scales one grain heavier in holiness than Benares, Dwarka, and Ceylon, still it would appear that these Sanscrit verses can only boast of a short existence of 150 years. The author has allowed a considerable stretch to his imagination, and the allegories, if they are not the simple creations of the brain, would appear to perpetuate the conquest of the aboriginal inhabitants by a nation from the northward, more advanced in arts and sciences, and whose deeds of prowess have been celebrated in the work under various characters of the Hindoo pantheon.

Still the country has no doubt from ancient times been esteemed a place of pilgrimage. The existence of many of her sacred buildings has been proved for a period of at least six centuries, and her rock caverns prove the presence at a very early period of the Boodhist worship.

We may, therefore, cease to wonder at the extravagant fiction which has

Translation of an Inscription on the Dowlut Boorj, at Vishalgur.

Perseverance overcomes all difficulties in this world.

The Dowlut Boorj has been completed (by its assistance) with elegance.

If you are anxious to ascertain its age,

It can be discovered in the (letters of) Dowlut Boorj.*

* The date of this bastion is shown by the Arabic Abjud or alphabetical notation. The letters contained in the words Dowlut Boorj represent the year 645 of the Hejira, corresponding with the Christian era 1247.

been raised on such facts. The delusion of sanctity was further fostered by the isolated state of Kolhapoor society, and even after the darkest ages of superstition had passed away elsewhere, here the fiery ordeal still continued as the test to accused-innocence, the battlemented turret was erected over the victim buried alive under the foundation stone, and human sacrifices threw a foul stain over the character of her faith.

The following translations of two extracts from the Kurweer Mahatma are given as specimens of the work :—

Chapter II.—" At one time the deities Shiva and Luxoomée disputed the superiority of their respective favourite abodes, when Vishnoo became the umpire, who weighed the places in a balance. When Vishnoo held up the balance, he asked the parties to declare candidly as to which of the scales preponderated. Shiva confessed, that his place appeared the lighter ; and Luxoomée in her turn joyfully said that her place seemed to be down to the very ground. After having thus obtained the opinions of the parties, Vishnoo repaired to the Court of Brumha, and, with the view of pleasing both, stated as follows :—

" ' I have created both the places in question, yet Kurweer appears a grain heavier than Benares. On hearing this declaration, all the gods present confirmed it by their votes.' "

Chapter LVII.—" This Kolhapoor Kshétra (sacred place) has existed from eternity. In seven different Kulpas (ages) it received as many distinct names : as at one time it was the residence of Kam, it was termed Kamalaya ; at another time, it was known as Pudmalaya, after the name of its king Pudma. In the third age the god Shiva passed his time here in the company of his wife Parwutée, and hence it was called Shivalaya. In the fourth age (as mentioned in Chapter XVIII.) Brumha Deo gave himself up to devotion in this Kurweer Kshétra, and it was then called Brumhalaya. In the fifth age, in consequence of its being the abode of Yukshas, it was designated Yukshalaya. In the sixth age, as the Rakshas (demons) resided here, this place was distinguished by the title of Rakshasalaya. (Such are the successive classical names of this place : it should be borne in mind that the affix or termination Alaya, which appears in all these compounds, means *a house*.) In the seventh or last age (*i.e.* the present), this place was first called Kolhapoor, and then Kurweer."

No. 1.

Translation of an Inscription on a Stone found in the Musjeed of Baboo Jumal.

* * * The King Gunduraditya Deo was the son of the King Soowurn Guroodadwaj, a descendant of the King Jeemootwahan. His (Gunduraditya Deo's) punishment to his enemies was fatal as serpents' bites. He was a Bhyrow (an incarnation of Shiva) to the petty kings at enmity with him, and a lion to his elephant-like inveterate haters. He was (to his enemies) what the sun is to the moon (in outshining them). He had gained the favours of Shree Maha Luxoomec. He looked graceful among the rows of kings. In the year Shuké 1037 (A. D. 1110) he granted to the Mahajuns in Inam (to please the God Nursinhu of Kolhapoor), for feeding twenty Bramins, the village of Koord, situated in Ednad, &c. &c.

No. 2.

Translated Substance of an Inscription on a Stone found at Moujé Herley, Peta Kurweer.

May the command of the God of the Universe, which is very grave, and bears the title of Shadwar, act with all prosperity ! Balchundru Yutee (or saint) was like the moon to the learned personages who were regular in their religious observances, who were learned in scientific treatises, and had consequently humbled themselves. The praises of this saint were sung by all in this world ; * * * he was very diligent in maintaining the best religion, which had descended through a succession of generations ; * * * he was the foremost of those who have made themselves glorious by the greatest achievements. * * * This Balchundru Yutee caused this command to be inscribed for the sake of Chundru Prubh, who was the principal of Yutees (saints), much renowned, principal of the Kollhapoor spiritual guides, the highest priest of the Jain temples, and who was liberal like the wishing-cap ; * * * the disciple of the feet of Balchundru, * * * who so called himself, and who was the principal of the Moonees, and was named Shantadheer ; * * * who was served by the Sadhoos (saints) ; who possessed the best qualities ; whose beauty was very attractive ; who had conquered the Ruttee Devec (the wife of Kundoo, the Hindoo Cupid), whose lustre was like that of the moon. * * * Be it prosperous with all people ! The family of Jecmootwahan, the King Shilahar, who had conquered all the petty princes, and who had made steady the Suptang* kingdom, and wealth. In this dynasty was born the King Bhoj Deo. The King Gunduraditya, the Sovereign of Walwud, whose fame was very extensive, and who every day increased his dominions and wealth, in Shuké 1040, Wilumbee Sunwutsur, on the occasion of an eclipse of the moon, granted in charity, at the request of Mogaldevce, to Shantadheer, the priest of the Bustee or Jain temple at Kollhapoor, after worshipping his feet, with the usual ceremony of pouring water, and after removing all obstacles, a field measuring 60 Wulas,† in the village of Heroolgey (since called Herley), situated near the village of Indranad. He also deposited a certain sum of money with a Sowkar, the interest of which, as well as the proceeds of the above grant, to be applied to defray the expenses of the Jain temple situated in the said village. The above grant is bounded on the south-east by a stone placed in the ground, on the south-west by a rivulet, on the north by a stone,

* This word is used to denote the seven things which constitute a Rajia or kingdom, viz. 1, Raja ; 2, Amatya, or minister ; 3, Soorboot, or well-wishers ; 4, Kosh, or treasury ; 5, Doorga, or forts ; 6, Rashtra, or ryots ; 7, Bula, or army.

† This is a Canarese word, and means a field ; but the term implies a lot of land that can be sown with a Kooree, with the assistance of a pair of bullocks, from sunrise to sunset.

on the north and north-west by a winding of the rivulet, and on the north-east by a stone. A charitable grant is more poisonous than the poison itself, for the latter kills only one person, while the former destroys the whole progeny. One who withholds land given in charity, whether by himself or another, remains in the excrement in the form of a worm for 60,000 years. Be it prosperous !

No. 3.

Translated Substance of an Inscription found in the Jain Temple near the Shookrawar Wés (Friday Gate) at Kolhapoor.

Gunduraditya Deo, the son of the King Shilahar, the ruler of an extensive dominion, and the lord of Tugurpoor, born in the family of Jeemootwahan, whose standard bore the sign of a golden eagle, was brave, very generous, gallant, and possessed of the blessings of Maha Luxoomec. On Monday, Kartik Wud 5th, Shuké 1058 (A. D. 1136), his servant the King Nimbdeo, who was endowed with all qualities, patient, bold, and glorious, caused duties to be levied for the performance of timely worship in perpetuity of the Deity in the Bustee built by him near the village of Kuodee Gole, for the repairs thereof, and for the maintenance of the saints, from the great merchants and other men of Kolhapoor, Meeruj, &c. and placed the collection of the levies at the disposal of Noorun Swamee for making the above disbursements.

The following are the names of the merchants paying the levies:—

Beelvun Shetee, of Kolhapoor.

Govind Shetee, of ditto.

Komar Anna, of ditto.

* * * * *

Beej Shetee, of Meeruj.

Moje Shetee, of ditto.

Desuya Shetee, the principal man under the King Gunduraditya, of Meeruj.

Bhome Shetee, of Beed.

Chowdhuree Bhane, of ditto.

Kupari of Kuodee Gole.

And other Shetees of the entire country.

Having assembled the above merchants, Nimbdeo ordered them to give out of their imports and exports a certain quantity to the deity of the said Bustee.

The following is the proportion enforced:—

On betelnut, turmeric, cummin seed, &c. and cloth, *

| | |
|--------------------------------------------------|------------------|
| imported and exported on pack bullocks, per load | 1 Fulum of corn. |
|--------------------------------------------------|------------------|

| | |
|---------------------------------------------|---------------|
| Ditto ditto on carts conveyed by 2 bullocks | 1 Seer of do. |
|---------------------------------------------|---------------|

| | |
|----------------------------------------------|------------|
| On betel-leaves, conveyed on pack bullock .. | 50 leaves. |
|----------------------------------------------|------------|

| | |
|--------------------------|-----------|
| Ditto ditto by man | 25 ditto. |
|--------------------------|-----------|

| | |
|-----------------------------|----------------|
| On oil, for each mill | 1 seer of oil. |
|-----------------------------|----------------|

In the same manner a small quantity should be given out of the perfumery imported and exported. *

To this, all the said merchants having consented, began to give accordingly. Those who will raise objections against this benevolent outlay will be deemed guilty of the five great sins committed in the Koorosketra.

No. 4.

Translation of an Inscription in the Old Canarese Character on a Stone found in the Jain Temple near the Shookrawar Gate of the City of Kollapoor.

There was in the family of Jeemootwahan a king of the name of Shree Shilahar, whose descendant was king Jyateego, the awe of all his enemies. He had four sons, named Gokul, Goowul, Keerteeraja, and Chundraditya. Gokul had a son named Marsinva, who had again five sons, named Goowul, Gungdeva, Bullaldeva, Bhojdeva, and Geyaditya; the last of whom had a very glorious son named Shilahar, who was the king of Tugurpoor. He had a son of excellent qualities, and a very gallant and liberal prince, and blessed by Maha Luxoomce, and who reigned happily in Walwudgaum (probably the present Wulewday). This prince in the year 1064, Pruwurteemaney Doondoobhee Nam Sumwutsur (A. D. 1143), on the full moon in the month of Magh, on Monday, on account of an eclipse of the moon, granted in Inam to Mankia Pundit Deva (after washing his feet), a disciple of Shree Mun Magh Nundee Deva, the Acharya (a conductor of religious ceremonies) of the Jain temple at Winherlecgau (probably the present Herley), called Roop Narayen Bustee, in the aforesaid village, a house extending to 12 hands square, and a farm to the extent of one-fourth of the area of that village, for the worship of Purushnath in the temple built by another disciple of the said Acharya, named Wasoodeo, for the repairs of the temple, and for the support of a Sunyasee that resided in it; and in order to prevent all future obstruction to the continuance of this grant, he caused this inscription to be written, such as would remain as long as the sun and moon continue to be on the earth. This grant should by all kings, both of mine and other families, be allowed to continue unmoled, if they aspire to the happiness of the next world.

*Translated Substance of an Inscription on a Stone in the Jain Temple at
Moujé Bamnee, Prant Kagul.*

Be it prosperous ! May the pure and comprehensive command of Arhan-poor Deo successfully prevail ! In the Shilahar dynasty there was a person named Gorawnteesh, who had two sons, named Gokul and Goowul. Gokul had a son named Marsinha Deo, whose son was Gunduraditya Deo. His son, who was the king of Tugurpoor, descendant of the Shilahar dynasty, and progenitor of the Jeemootwahan family, attained to the knowledge of the Punch Maha Shubda (five great words). The king Wujceaditya, who was graced with the Birudawulee of kings belonging to the Jeemootwahan dynasty, such as Soowurn Aguroodudhwuj, Muroowuksurp, Anjunsing, Reepoo, Mandlik, Bhyrow, Widwishtguj, Kuntirun, Kulecgoog Vikramaditya, Roop Narayen, Geereedoornglanghun, Shuniwarshidee, Shree Maha Luxoomee, Lubdha, Wur-prusad, &c. This king, while in the midst of his glory, and passing his time in hearing delightful stories read in his camp at Walwud, on Friday, in Shuké 1073, Prumadee Sumwutsur (15th Bhadrupud Shood), on the occasion of an eclipse of the moon, granted in charity, at the request of his maternal uncle Luxoomon, who was a petty prince, to Arhunundee Sidhant Deo, the disciple of Shree Roop Narayen Chytialingacharya Magh Nundee Sidhant Deo, by washing his feet, with the usual ceremony of water, a piece of field ground, measuring $\frac{1}{4}$ Neewurtun, a flower garden measuring 30 Dunds, and a house measuring 12 cubits square (a measure approved by everybody), after removing all restraint thereto with a command engraved on stone, for the continuance of the said grant during the existence of the sun and moon, and the constellations, for performing the eight kinds of worship to the god Shree Purushnath, whose temple the king had caused to be erected by Kamgownda, in the said village, for repairs to the temple, and for feeding the Yutees residing therein. One who takes away (or withholds) land granted in charity by himself or another, becomes a worm, and remains in the excrement for 60,000 years. Poison is not so venomous as the riches of the deities, for the former kills only one (or person who swallows it), but the latter destroys the whole progeny. One who takes away the Yudnya (offerings) of charity is thrown into the hell, in which he remains during the existence of the sun and moon, and made to suffer great torments.

No. 6.

Translation of an Inscription in the Old Canarese Character found on a Stone near the Koteteerth, near Kolhapoor.

Be it prosperous ! The King Muhamunduleshwur Bhojdeo used to reside at Walwud (probably the present village of Wulewday), amusing himself by hearing and discussing subjects of interest, and protecting his subjects. On the 10th Ashad Shood, Shuké 1101, Weelumbee Sumwutsur, in the Duksheenayun Sunkramun fortnight, having been engrossed with the devotion of the god Koteshwur, caused a temple to be erected in dedication to him, and made a certain allowance for the *Ashtaweedharchun* (eight forms of worship) of the idol. There used to live the younger brother of the Aya, named Narayen Shetee. To the east of the Koteteerth was a plot of ground covered with Babool trees, to the east of which was the Wrootee (land given in charity) called Bhoree Kaleeyan, and to the north of which was the Wrootee called Kankoweya, which measured $5\frac{1}{2}$ Gudyans* of land, and which has been given in charity with the usual ceremonies of water, &c. attendant on such occasions. Out of the annual proceeds of this Wrootee, the inhabitants thereof should appropriate such portion as is exclusively necessary for their maintenance, and the rest is to be applied to the timely *Ashtaweedharchun* as heretofore. He also bestowed, with its contents, a lot of ground in which his ancestors had deposited a quantity of gold, on which this stone is placed under a tree. * * * The confiscator of this patrimony, * * * like the perpetrator of the eighteen sins, * * * will become a worm.

* The word Gudyen is a long measure, and is prevalent in Southern and Western Carnatic, beyond the Toongbhudra river. It varies according to the prevailing customs of the different districts. In one of them it measures 16 beegas.

A Pillar of the Temple alluded to in the Inscription.

Translated Substance of an Inscription on a Stone in a Wall of the House of Anacharya Pundit Rao, in the Compound of the Temple of Ambubae, at Kolhapoor.

Be it prosperous ! The great King Bhojdeo, who heard the best of stories read, was reigning in happiness on the hill fort of Punala. On Tuesday the 12th Poush Wud, Shuké 1112, Sadharn Sumwutsur, in the Ooturayen (or the progress of the sun northward from the Tropic of Capricorn), he, with a view to ensure the prosperity of his kingdom, and for the maintenance of the people residing in the monastery, erected by his dependent Lokun Naik, for performing five kinds of worship of the deities Umrooteshwur and Ooma Muheshwur, for offerings to the goddess Shree Maha Luxoomee, three times a day, and for the maintenance of his dependent Bramins, and the repairs of the monastery in question, granted in charity to four persons residing in the aforesaid monastery, named Aditya Bhut, Luxmeelhur Bhut, Kurhatuk Prubhakur Bhut, and Ghaisaswasecanna, with the usual ceremony of water, with the command (or rather grant), duly inscribed, and the same to be enjoyed during the existence of the sun and moon, 550 Dulees or beds of batty ground, situated within the boundary, and to the east of the village of Kopurwad, in the Eedhur district. The above grant is bounded on the east by the villages of Teerwar and Beed, the road to the Punala fort, and the field called Kurdkshetra, to the east of which is the God Kshétrapal, having the side of a tank near him. On the north the grant is bounded by the rocky ground called Rejmal, on the west by the field of the village deity named Chundika, and on the south by the field called Kurunja.

In Shuké 1114, Pursedhavee Sumwutsur, on Friday the 1st Ashwin Shood, Kulian Naik, the son of the aforesaid Lokun Naik, purchased a moiety of the Wrootee (or Dhurmadao land) of Luxoomon Ghaisas, situated within the boundaries of the village of Powgao, from the Mahajuns of the said village, and granted the same in charity to the aforesaid four Bramins, with the usual ceremony of water, after removing all obstacles, to be continued unmolested during the existence of the sun and moon, the grant being made for the purpose of defraying the expenses of the Chutra (or daily feast to Bramins), ordered by his mother Yosakowa.

In Prumadee Sumwutsur, on a Friday, the 1st Balgoon Shood, this same Kulian Naik purchased some Wrootec or Dhurmadao land, belonging to Mayee-kowa, the daughter of Chundog Someshwur Bhut, $\frac{1}{2}$ Neewurtun* of the best kind of land, situated within the boundaries of the Dhurmadao village of Powgao, and granted it in charity to the aforesaid four Bramins, for the subsistence of certain students learning the Vedas, with the usual ceremony of water, after removing all obstacles, and to be continued during the existence of the sun and moon.

* *Ancient Land Measure.*

10 Cubits = 1 Dund or Katec.
30 Square Katees ≈ 1 Neewurtun.

Translation of an Inscription on a Stone found at Raybang.

May the command of the God of the Universe, which is the best, most grave, and which bears the title of Shadwar,* conduct itself with all joy ! May the God Wuraha, who with his enormous tusk lifted up the earth, along with its mountains, be the giver of wealth to the world ! May the God Shiva, whose eye in the forehead looks beautiful beside the two rows of the perspiration drops which exuded on embracing the most beautiful Parwutee, like a wreath of the most beautiful pearls, with a ruby in the middle, be the giver of happiness to the world ! The King Krishna, who was born in the Soorya Vunsha, made his own family prosperous. He had acquired much wealth by his legal power, had become very popular among his subjects, and whose commands were obeyed by all the princes on the earth. His Commander in Chief was held in great reverence. The King Krishna Raja, who possessed brilliant talents, and who made his obedient subjects happy and contented, who was a just king, and the author of many good laws, had four wives, viz. Suruswatee, the Goddesses of the Earth, Wealth, and Fame ; from among whom Fame, unwilling to confine herself within the bounds of his empire, betook herself to the different princes in the four quarters of the globe (*i. e.* his fame spread throughout the whole world). He was succeeded by his son Kartaveerya, whose feet were beautified by the lustre of the gems fixed to the crowns of many petty princes, and who killed with his sword innumerable powerful princes, who illuminated for him the road to heaven ! He was succeeded by the Prince Luxoomee Deo, who could tread over the heads of all princes, was the destroyer of ignorance, protector of thousands of cows, possessor of great wealth, and free from all blot ! This prince could be compared with the sun : as the sun is the destroyer of darkness, he was the destroyer of ignorance ; as the sun possesses a thousand rays, he was the protector of thousands of cows ; as the sun holds the Lotus in his hand, he had grasped Luxoomee (wealth) in his hands ; as there is no night with the sun, the prince had no stain about him ! When this prince set out on his expedition to conquer the whole world, the surface of the earth was filled with the hoofs of his innumerable chargers, and filled the air with the dust, which ascended in clouds to the sky. At the sight of this, the horses of the sun, thinking that it was the earth that had crossed their way, made a low bow, and took their road from over the dust ! When this king arrived at the Shoke Desh, the king of that country brought to him a present of vegetables, as the only produce of his territory. From thence the king proceeded to Mallon Desh (probably Malwa), the king of which country fled away at his approach. Thence he proceeded to Chole Desh, the king of which country fled to the woods on the sea coast, where he spent the rest of his life. The king from thence went to Guzerat, the king of which country

* Turkshastra (Logic).

fled to such a solitary place as no human being dared live in. This conquerer had so inspired the world with awe, that it destroyed the slumber and ease of all people. From this king was descended Kartaveerya, who was blessed with the best temper and the most graceful form, who had filled the world with his fame, and who wore about his feet the lustre of the gems attached to the crowns of kings. When the overflow of the fame of this king filled the whole sky, the moon, who moves about in it (sky), thought it was the fame of the Sheshashayee Bhugwan (Vishnoo). The horse he used to ride upon was swifter than the very wind, and the receptacle of all good qualities. Whenever the king rode out on this horse, the sound of his Bheree (kettle-drum) would make his enemies quake. The following is the blessing by which the God Shree Mulukarjoon was made pleased :-

“ May you enjoy long life ; be you prosperous ; let justice be your ornament ; be you charitable ; be you the giver of joy to the world, as the moon is to the sea ; be you the conqueror of heaven ; be you the fit object of worship for the people ! ”

Now for the King Kartaveerya, who was descended from the Luxoomee Deo Raja, had acquired the Punch Maha Shubda (five great words), was the possessor of extensive dominions, the king of Atumpoor (probably the present Uthnee, in the Belgaum Zilla), was blessed by the learned, was fond of hearing great personages praised, was the author of the Sahitya Shastra (or treatise on rhetoric) : he bore a golden statue of a Gurood at the top of his flag ; was beautiful like the Madan (Hindoo Cupid) ; fond of military exploits ; was the fighter with Guda (a mace) ; was the destroyer of his enemies' heads ; was the catcher of his enemies' heads tossed above : he widowed the wives of his enemies ; he was a great devotee of the Mahadeo ; was just and wealthy ; he made his enemies quake by the strength of his arms ; was the king of kings, the sun of his dynasty, the receptacle of best qualities, and possessed best fame with such qualities. He reigned at Venoogaon. His mother, named Chundeecka, who was the wife of Luxoomee Deo, who was very chaste, and charitable, and whose fame has been described by the learned as being pure like the Gunga, and brilliant like the rays of the moon, died of the disease called Ghutasarp (*Cynanche maligna*).

To Shree Shooabhachandru Butaruk, who was the chief of all Butaruks, who was very honorable, a great devotee of the God Anterdnyance (one that knows intuitively whatever passes in the world) ; was a destroyer of pride as a lion does an elephant ; who was always respected by the Jain king ; who was free from sin and the cares of life ; who belonged to the sect called *Mool Deohee Gun Poostuk Guscha* ; who was born in the Koond family, and whose conduct was the purest. The king granted in Inam, with the greatest delight, with the usual ceremony of water, and with such injunctions that none of his subordinates should do even so much as to look at them, in Shuké 1124, Dooruntee Sunwutsur, on the 15th Vyshakh Shood, on a Friday, on the occasion of a Wyuteepat (the seventeenth of the astrological

Yoges), the villages of Budehinchbee and Bamonwar, situated within Korce Suhusra, and near Hooveenbaug (present Raybaug), after defining their boundaries, along with hidden treasure-gardens attached to them, and with everything contained therein, for the purpose of repairing the temple of Rut Jain, which had been caused to be erected by the king's mother Chundreeka Devce, and for the maintenance of, and medical assistance to, the students in the college. Also in the village of Hooveenbaug, two fields, named Mahunapul Korce and Siteeyun Korce, two houses, two markets, two houses of oil-sellers, one Koorun or pasture-ground, one garden situated to the north of the field called Nachnee, and another to the west of it, and a third situated to the north of the garden of Shree Bunkuatideo; in the village of Hooveenheraljee, in the southern direction, and near the villages of Bustwar and Bhendwar, and to the west of the public road, a field measuring 105 Koorees, with the boundaries marked with stones, one house, and a Koorun or pasture-ground. Also in the village of Bustwar, to the south of it, and by the side of the river of the village of Aklee, a field measuring 2,000 Koorees, with the boundaries marked with stones, one house, and a pasture-ground. Also a field measuring 1,000 Koorees, with a house, and a pasture-ground, to the south of the village of Bekoor. A similar lot of land, with a house measuring 16 cubits, and a pasture-ground, to the east of the village of Kureepkodee. Also a similar grant to the north of the village of Ukhullee, which is situated to the north-east of the village of Kureeooroo; a similar grant to the east of the village of Bekorce, which is situated to the south-east of the village of Soogundhuritee, together with a field called Gudda (land in the middle of a river), measuring 10 poles. Also a lot of land measuring 1,000 Koorees, with the boundaries marked with stones, together with a house and pasture-land to the north of the village of Nilunjee. * * * A similar grant to the north of the village of Nooroo. Also a field in the village of Kondnoor, measuring 700 Koorees, to the east of which * * * a house and pasture-ground near it, 127 pack bullocks, &c. &c. exempted from all duty. * * * About these grants * * * formerly great Rooshes (saints) * * * The earth was possessed at different times by different kings like Sugur, &c. and each in his turn enjoyed the benefit of it (meaning each enjoyed the fruits, according to the use he made of it). * * * The person who withholds the land given in charity, either by himself or another, is thrown in the excrement in the form of a worm for 60,000 years. * * * A greater merit is achieved by the continuance of a grant than by giving a fresh one, for by the latter is procured a place in the heaven, while the former procures everlasting happiness in the world to come. * * * This is the command of the Jain temple, erected by the Rut family in Hoosheehoovenbaug.

No. 10.

Translation of an Inscription on a Stone found in the Temple of Kopeshwur, at Khedrapoor.

Obeisance to the God Mahadeva, over whose head is the beautiful moon, and Chowrees, and who is the support of the universe ! May the God Mahadeva Kopeshwur render the religion of the whole world steady ; may he ever be the giver of happiness to all creatures ; and may he be the source of aggrandizement to his worshippers ! As I have at present been blessed with prosperous circumstances, I am going to establish a religion, which to your wise, learned, and generous progenitors, and Bhoodeva (Bramins), was ever like the shower of nectar, and which may God grant always spread like the Kulpturoo (a fabulous tree, like the wishing-cap), that from a sprout proceeds to leaves, from leaves to flowers, and thence to fruit ! The illustrious Maharaj Shree Shingun Deo,—who was crowned with the ceremonies of the *Vedas*, who is the support of the whole world, the descendant of Vishnoo, the God of the World, the King of Kings, and the Emperor of Dwarka, (to the Yadow race he is like the sun, that causes the bud of a Lotus to be blown), destroyer of enemies, the most excellent and pre-eminent among the circle of the kings, and whose commands are obeyed by the dread of his powers,—does hereby enjoin that the village of Koondulrawur, in the province of Meeruj, situated at the junction of the Krishna, Venec, and the Tapsee rivers, with all the trees, farms, fields, and everything contained within its boundaries, from the confluence of the Krishna, Venec, and Sooweynee, to the boundaries of his empire, be apportioned to the self-existent God Shree Kopeshwur, in order that all the inhabitants of the village may apply its revenue to his worship, &c. in different forms. The King Shingun Deo, who is like the moon, that causes the ocean of nectar to overflow ; like the sun, that destroys the darkness of poverty ; and like the sea of milk, in whose bosom the God Vishnoo perpetually lives, also assigned the two villages which are to the east of Koondulrawur for the repairs of the temple.

No. 11.

Translation of an Inscription in the Old Balloah Character, on the Pedestal of a Pillar in the Pagoda of Gunputee, situated to the West of Ambabacc's Temple.

Bow to Shiva ! May that Maha Luxoomce, who wears the emblem of Shiva on her head, and who is the destroyer of all sin, be your deliverer from (the cares and troubles of) this world ! May that Vishnoo, who by his will creates and destroys the universe, whom the gods and the giants pay obeisance to, and who is worshipped by the Rooshes and other men, be always favourable ! The illustrious King Tylin, who resembled the sun in valour, and who was descended from that King Shingun ; * * * who granted lands to many learned men, and pleased Shree Maha Luxoomce by many presents of jewellery ; * * * praised by the learned ; * * * whose roll of names * * * ; who gratified the chief Bramius like Raja Narayen by the sixteen Mahadans (great gifts) ; * * * who made the Lotus of the Yadow family bloom on the earth ; * * * who in the strength of his arms was Bheema (one of the Pandows) ; who was mighty, the god of his people, and the very receptacle of reason ; who in bravery was Muudrachul (a fabulous mountain, said to have been used in churning the ocean) ; who was to the Malweshwur Kings (probably the Kings of Malwa) what Sudasew (a name of Shiva) was to Madan (Hindoo Cupid) ; * * * like a jewel on the neck of Suraswntee (the Goddess of Learning). * * * There flourished in the Kaleeyoog a king named Tylin, who was renowned for the kindness of his commands. In Shuké 1140 (A. D. 1218), Buhoodhanya Sumwutsur, he caused to be erected a gate in front of the temple of the goddess. * * * There is a splendid Torum, (awnings, &c. on festive occasions) in front of the goddess. * * * Be it prosperous !

No. 12.

Translated Substance of an Inscription in the Old Balbodh Character in the Sanscrit language, on a piece of Stone fixed to the Wall on the South Side of the Temple of Rameshwur, near the Tank Rowneshwur.

Be it prosperous ! May the Goddess Shree Maha Luxoomee, Maha Kalee, the resident of Kolhapoor, who is at present the dispenser of happiness, and the redeemer of the three worlds, continue herself in all joy for a long time !

Be it prosperous ! The very famous King * * * and the world-conquering Shree Shingun Deo, reigned with all success. Dated Shuké 1157, Munmuth Sumwutsur, Friday, the 30th Shrawun Wud.

No. 13.

Translated Substance of an Inscription on a Stone found near the Steps in front of the Western Gate of Mahakalee, in the Temple of Ambabae.

Be it prosperous ! In Shuké 1158 (A. D. 1236), Doormookhee Sumwutsur, on the 15th Magh Shood, on a Monday, during the reign of Juyuseel, who, like the sun, that causes the bud of a Lotus to bloom, rendered famous the Yadow race, which descended from Vishnoo, the master of Luxoomee, the best of kings, and the sovereign of Dwarawuteepoor (now called Dwarka), who was to Malwa and Guzerat what Anukoosh (an elephant goad) is to elephants; who conquered Teloongraya; * * * who was very glorious, world-conquering, and successful. * * * While Lushooyee Deo, the son of Jenoo Naik, the great minister, who lived by serving the feet of this king, was in power, * * * Daroo Naik, who was appointed at Kolhapoor by the Naik * * * caused the following command to be written by him :—
* * * On the occasion of an eclipse of the moon, after the usual ceremony of water, * * * forsecuring the performance of the five kinds of worship of the God Soowurn Jaleshwur, of Dhoop, Deep, Nywedya, &c. after relinquishing the claims of Government to the revenue, to the satisfaction of everybody, * * * he gave twenty-five bullocks for warding off calamities. * * *
It is bounded on the north by the Kuree (ground containing pebbles), on the south * * *. He who will resume the land bestowed in charity by himself or by another person will, after death, become a worm, and live as such for 60,000 years. He who will obtain authority over this country will likewise be entitled to the merits of this grant. Be it prosperous !

No. 14.

Translation of an Inscription in the Old Balbodh Character, on a Stone lying in the Palace.

Be it prosperous ! On a Friday, the 30th Vyshakh Wud, Shuké 1172, during the reign of the glorious, world-conquering, and successful Yadow Narayen, *alias* Shree Konher Deo, and during the ministry of Kamaya Naik, while Jaitmul Raoot was on duty, Wunuya of Eedhur, who was appointed a Collector of Customs at Kolhapoor by Kamaya, the General Superintendent of Customs, transferred into the hands of the Mahajuns (principal men), with the usual ceremony of pouring water, all kinds of duties levied in the village of Koord (which had originally been granted in charity), for the prosperity of Ambika, the wife of Shree Gowtamaree Keshow Deo. He who confiscates the land given in charity, by himself or another, shall remain a worm in excrement for 60,000 years. Be it prosperous !

No. 15.

Translation of an Inscription on a Stone found fixed to the Rampart near the Wuroonteerth Gate, contained in 39 Lines, of which 19 Lines are worn out.

Peace ! I serve the feet of the Loaknath (God of the People) ! * * * May the sight of Maha Luxoomee protect you ! * * * Be the pastimes of Vishnool in the sea the source of your wealth ! * * * May the Saint Wishwaroop, who is respected by the greatest of Moonees (Rooshes), flourish with all joy ! * * * At that time was reigning the King Shingun, who conquered many refractory elephant-like kings at enmity with him ; who was the master of all people, and whose valour was like that of a lion. * * * From Sinha Mahipal * * * proceeded the king * * * wonder * * * confidant of Ram Raja * * * was a most opulent Commander in Chief * * *. The King Ramdeo, who was the master of all the people, who made the Yadow Kool (family of Yadows) famous, as the sun causes the bud of the Lotus to bloom ; who was very powerful, and a universal king ; who shone in the midst of the rows of kings like Rayu Narayen and others ; who was very successful, granted in charity, with the usual ceremony of pouring water, in Shuké 1194 (A. D. 1272), Wurtman Angeerus Sumwûtsur, on the full moon day of the month of Magh, on the occasion of an eclipse of the moon, for the performance of Punchamroot Pooja (a worship with five nectarious substances), in the morning, and Ashtang Pooja and Maha Nywedya of

the brilliant and self-existing God Brumheshwur, and for feeding Tupuswees, to his Gooroo Wishwaroop, a great devotee of Shiva, the well-known village of Geereewulee, situated in the Toolmee Ghole, with its trees, with its four boundaries, and with everything appertaining to it, viz. the hidden treasures, the revenue derived from the collection of customs, fines, &c. &c. for securing the prolongation and the prosperity of his dominions and wealth, with injunctions that no king should even dare to point at it with his finger, and to be enjoyed during the existence of the moon, the sun, and the stars, with the exception of a portion of land valued at 8 Nishkas (a Nishk is equal to 4 coins current at the time), which he granted in charity to Rewuldeo, the son of Bhutopadhyia Gudadhur, Pundit belonging to the Bhargow Gotra, and Jum-bey Naik the son of Govind Naik, also belonging to the Bharudwaj Gotra. He also granted lots of land to other Bramins in the village of Dewta, in conformity with the Shastras, as well as to Wishwaroop Mooneendra; 4 Nishkas worth of land to Wasoodeo Bhut, the son of Maynewdeo Naik, and the grandson of Bhut Gungadhur of Wutsa Gotra, and 2 Nishkas to Keshowdeo, the son of Damodhur Triwedee, born in the Gowtum Gotra, were granted by the Gooroo Wishwaroop. These charitable grants should be hereafter allowed by all the succeeding heads of his family, the authorities of the country, Collectors of Customs, &c. &c. to continue unmolested. For there are two things, *Dan* (granting) and *Palun* (maintaining): the latter is more meritorious than the former, because by *Dan* is acquired (a place in) heaven, and by *Palun* everlasting station or happiness. The following punishment is stated to be awarded to those who have been guilty of taking away gifts:—Those who take away gifts made to Bramins become black snakes, and are cast into the cavities among the waterless jungles on the Vindyachul (Satpoora mountain). These lines were written by Wasoodeo Bhut, son of Gungadhur Bhut, the receptacle of learning. Be it prosperous!

No. 16.

Translation of an Inscription on a Stone found on the Wall of the Portico of the Temple of Shideshwur, at Shidnorlee, Ilaka Kagul.

Be it prosperous! I pay obeisance to that lustre which has emanated from the feet of Shree Maha Luxoomee, and which fills the whole world with joy. The sportful God, in the form of Wuraha (a boar) * * * The most glorious king Shingun, Lord of the Universe, who overawed all his enemies by his valour, conquered the world by personal exploits. * * * His sons also were distinguished for valour, liberality, and bravery. Among them was * * * who, to ensure the preservation of his fame as long as the existence of the sun and moon, on Tuesday the 15th of Shrawun Shood, Shuké 1199 (A. D. 1277), at the suggestion of the venerable Gund Naik, relinquished, with the usual ceremony of pouring water, in the presence of five abbots, the right of levying customs and taxes on artificers and persons not blessed with sons, which were levied in the village of Shidnorlee, which had originally been granted in charity during the glorious reign of Shree Ramchundru Deo, who was graced with the string of the meritorious deeds of his ancestors. The continuance of this grant should be duly observed by the succeeding authorities and Collectors of Customs; for a greater merit is attained by continuing what has already been granted, than by making a new grant. There is much sin in seizing a gift, for it is written that he who takes away possession of land granted by himself or by another is destined to live a worm in excrement for a period of 60,000 years.

No. 17.

Translation of an Inscription on a Stone found fixed to the Eastern Side of the Portico of the Temple of Sheshashayee, at Kolhapoor.

There was a king of the name of Nagarjoon, who destroyed the power of the greatest foreign kings. He having filled with dust the cities belonging to his inveterate enemies, performed such actions as caused the beating of kettle-drums for his most renowned victories. He was so famous that he was even fit to be wedded to Prowess herself. * * * Having conquered * * * great kingdoms, he was great among the petty princes, and like Indra who shines in heaven.

No. 18.

Translation of an Inscription on the Throne of the Idol of Purushnath, in the Jain Temple at Kusba Saogaon, Peta Sherole.

There lived a person named Sydhantik Jain, of the Wudeeyoogun Namuk family. His fame was widely spread. He was the delight of his family, as the sun is that of the Lotus. He possessed eminent qualities. He was very attentive to the observance of his rules. His disciple was Kumak Shantee, who had a very learned, rich, and eminent disciple of the name of Bummun. This last-named personage caused a temple to be erected in the village of Shawoo, to secure the everlasting existence of the Jain religion.

No. 19.

Translated Substance of an Inscription on a Stone fixed to the Portico of the Temple of Sheshashayee, at Kollhapoor.

There was a large and beautiful pillar of honour erected near the dwellings of the principal merchants, and in the middle of the beautiful house of dancing girls, the lustre of which pillar reached the sky. The beautiful Nimbdeo, who had caused a temple to be erected to Aditeertheshwur by the artificer named Indra, and who used to look constantly at the very ancient gold pinnacle at the top of the Jain temple erected by the famous King Nimb Raja, which was like the stock of merit acquired by him, and whose upper structure was very beautiful. This king was like a Kulpwriksha to the songsters attached to the Mitia Shala, and other petitioners who used to collect themselves there. This King was obeyed and worshipped by everybody: he threw the beauty of Indra (King in Heaven) into oblivion. Like Madan (Cupid) he captivated women in a most splendid palace, and had acquired a very high station, and great divine perfections, by making offerings to the sun.

No. 20.

Translated Substance of an Inscription on a Stone to the North of the Portico of the Temple of Sheshashayee.

May the God Mahamunduleshwur grace the victorious King Gunduraditya ! He is graced with young maidens like a tree with climbing plants. He is like the Kulpwriksha. * * * For Brumhacharya (chastity) he can be compared with Bhishmacharya. He was born in the family of Widyadhur. In beauty he resembled Narayen Deo Bhooputee (master of the world). He was an inquirer after the tenets of the Jain religion, in order that the God Roop Narayen Deo, who presides over the Jain religion, may make him prosperous. He is praised for his Madan-like beauty. He is praised by the most glorious personages. He belonged to the Jeemootwahan dynasty. He is a reservoir of pious conduct, and his glory was solely acquired by himself.

No. 21.

Translated Substance of an Inscription on a Stone to the West of the Portico of the Temple of Sheshashayee, at Kolhapoor.

* * * Reliever of the world from adversity. * * * In the dominions of Nimbdco, whose conduct was pure, who was the conqueror of the Kings of the Kalceyoog (iron age); who was grave and glorious like Bhishma, and who conquered the affluent feudatories with their immense retinue. Idols of Jeeneswar, and the best Jains then existed everywhere. At that time, having been actuated by the thirst of knowledge, the King Nimb Raja, who was the reservoir of many good qualities, became the Kulpwiksha (wishing-cap) to the learned Yutees (saints, &c. of the Jain religion).

No. 22.

Translated Substance of an Inscription found on a Stone in the Shrine of the Temple at Honoor.

Be it prosperous ! Obeisance to the reasoning of Gooroo Moolgun, the professor of Poonagvaksas.* It is the light of wisdom and knowledge to the darkness of ignorance and superstition. The chiefs of extensive dominions, Bullal Deo and Gunduraditya, granted in charity a field in the village of Veenzor (the present Honoor), to the Bustee built by Bumgaoond.

* Doctrine of a certain religious sect among the Jains.

Translation of an Inscription on a Stone in the Temple of Shree Ambabae.

Reverence to Shree Maha Luxoomee! May the God Gunputee, who with the lustre of his white teeth destroys the darkness of ignorance, and who is ever ready to do good to the universe, protect you! May the Goddess Maha Luxoomee, who is omnipresent, destroyer of all evils and of the giants, and affectionate to her worshippers, protect the king Somedeva! As the sea is the mine of all jewels, and the sun that of brightness, so was the pure and victorious family of Chalooka celebrated for propitiousness, beauty, riches, &c. and to which the above king belonged. Where can I find words adequate to praise those most illustrious princes that were born in this family, whose very recollection lowers the princes of the ancient times, like Mandhatroo, &c. in the estimation of the world? I shall, however, try here to give a brief description of those few who were celebrated for their virtue at Sungameshwur in the Konkun. One of these was Kurnadeva, who with his charitable conduct could purify the earth, with his power punish the unjust sovereigns; was famous throughout the world for his benevolence; had pleased the deities by many a sacrifice, and whose qualifications were unsullied. The king that succeeded him was Nroosinva, who had under his control many petty princes, whose capital was Vijuyaput, the most famous city in the East, who caused the Chalooka race, like the Lotus flower, to be blown; who struck a certain gold coin called the Wura, which he wore as a symbol on his flag; whose fame as the best wrestler was spread over the world. For his glorious deeds he obtained the title of Shurnangut Vujru Punjur (Cage of Thunderbolts to those who sought his protection); who was ready in the service of God, the Bramins, and his spiritual guide; who was learned among the learned, and whose hands glittered with innumerable gifts. He was just in ruling over his subjects, was the author of many glorious deeds, was the destroyer of the *Kulee Kal*, and was the ocean of prosperity. He was also a receptacle of riches, and made the world happy by his benevolent actions. His son was Wetoogeedeva, the extent of whose brightness was great, and in manners and ferocious looks he resembled the sun. This Wetoogeedeva ruled over his subjects with the virtue and valour of his father, and made the people happy like the moon. He was succeeded by his son Someshwur, who was the most prominent among the kings, and who enlightened his family like the moon in winter. This prince by his virtue and valour enabled the earth to accomplish the object of her existence, and then went to heaven, probably to beautify it, but observing the earth desolate without him, he again returned to the earth, and lived in the form of a *Linga* (emblematic representation of *Shiva*). He was succeeded by his younger brother Somedeva, who was much celebrated over the world as the best of men, by the grace of Shree *Shumbhoo*. He was very

beautiful ; a great lover of truth. He loved to walk in the path of virtue, and was very expert at the destruction of his enemies. This prince, when he came to perform (Madhyam Pooja) worship at midday of the Goddess Shree Maha Luxoomee, whom all demi-gods and giants respect, granted in Inam, by the advice of his spiritual guide, as well as at the entreaties of the Bramins, the village of Koombhargaum. This village is situated in the rear of the abbey of Kuladeva, and he who confiscates it would be guilty of having broken to pieces a hundred Lingas (symbols of Mahadeo), and would be subjected to the torments of hell. There have been several kings who ruled at different times over the earth, such as Sugur, &c. but they have all been in their turns sharers in this meritorious action for the continuance of such grants. He who sequesters any land granted in Inam, either by himself or another, would lead the life of a worm in excrement for 60,000 years. This King Somedeva having been inspired by Shree Shumbhoo and his religious guide, granted the above village in Inam, to be enjoyed until the existence of the sun and moon.

The above verses were caused to be written by Widyadhur Pundit, at the desire of King Somedeva.

1. *Inscription on a raised Piece of Masonry opposite the Fort Gate, leading to the Tank near the Durgah.*

"In the name of God ! There is but one God, and there never was or ever shall be any other God but him.

" This bastion of strength was, by the grace of God, completed during the reign of Alee Badshah, the king of kings.

" Built by Shums-ood-Deen, who was worthy to ride kings ; the chief of artificers.

" The cost of building this single bastion exceeded in rupees ! the number of years of the Arabic era 955 (A. D. 1554-55)."

2. *Inscription on the Gate of the Fort opposite the Durgah, since fallen into Ruins.*

" The gate of this fort was built by the slave Muksood, in the reign of Ibrahim Adil Shah, the father of victory. This inscription was written in the year 994 (A. D. 1593-94), by Moolla Zaofuran Dubeer."

3. *Inscription on the Door of a Tank near the Mamlutdar's House.*

" This tank was built in the days of Adil Sultan Mahomed Shah Bamnee—may

under the directions of Sekunder Bahadoor—may
his wealth be eternal!"

" If you seek to know of me the history and age of this reservoir, see that you inquire in a good spirit. The date of the door of the reservoir of Punala corresponds with the era of Sekunder Shah."

the Almighty protect his kingdom and empire !

and in the days of the reign of Adil Khan Ghuznee—may the Almighty &c., and

4. *Inscription on the Bungalow, the residence of Major Graham.*

“ During the reign of the resplendent-faced Ibrahim Adil Shah, a heart-enchanting palace was built upon the top of the terrace of the fort.

“ Its breadth is 1 Nowroos, and its height is 2 : the delightful spot, worthy of contemplation, was erected by Muksood Aka.

“ It was in the year 1003 (A. D. 1602-03) that this habitation was built.

“ Oh God, preserve it ! and may thy far-spreading shadow rest upon it for ever !”

5. *Inscription near a Pool of Water situated beyond the limits of the Town.*

“ Mountain and sphere (of heaven) are met together : a hundred springs of water gush forth from them ! All who have come and gone have been enchanted with this spring and mountain.

“ Built during the reign of Ibrahim Adil Shah, in 995 (A. D. 1594-95), by Daood Aga.”

6. *Inscription on Tank opposite the Durgah.*

“ In the name of God, the All-just Artificer, who creates sweet water from the stony rock !

“ Do thou ordain that glorious victory may attend the reign of Ibrahim Adil Shah, the king of kings.

“ This building, the beautiful reservoir which you behold, was excavated by Khizer,* (the fabulous deity of water, and inhabitant of Paradise,) the chief of all nobles.

“ It was in the year 964 (A. D. 1563-64) that this spring of Khizer's became a lasting monument.

“ Oh God ! preserve it until the end of the world, in the name of the Prophet—may the salutation of God rest upon him !”

* Through his intervention, he being invisible ; therefore, I suppose, by his spirit.

*Inscription on a raised piece of masonry, opposite the
fort Gate leading to the Tank near the Durgah.*

ANNALS OF KOLHAPOOR.

From the earliest inscriptions extant, it would appear that in the twelfth century, about the year A. D. 1110, several Rajas of the Jain faith held a divided rule in this country, and the conquest by the succeeding Hindoo dynasty of Yadow occurred about the year 1179, when we find mention of a Hindoo Raja who reigned over the entire tract extending from the Mahadeo range, north of Satara, to the river Humkasee, south of Kolhapoor, and including all the southern part of the Konkun as far as Sudasheogur.

On the Mahomedan irruption during the thirteenth century, a Hindoo Raja named Bhoj was in possession of the western portion, holding the fort of Vishalgur as his head quarters. Another petty prince occupied Punala, whilst the plain country was under the divided government at least of two Hindoo rulers, who held Courts at Berud and Khedrapoor.

The subjection of the country by the Mahomedans was not effected until the close of the fifteenth century. In the year 1690 Kolhapoor was reckoned as a district of Bejapoor, the fifth Soobha of Aurungzebe's conquests in the Deccan; but the dominion was resisted with great pertinacity. The country never fell entirely under the subjection of Delhi even during the lifetime of Aurungzebe, and at his death it was entirely abandoned to the Murathas.

Included among the possessions of the great Shivajee, Kolhapoor remained an integral part of the Muratha empire, until the treaty in 1729 formed it into an independent principality.

The Kolhapoor is a younger branch of the great Shivajee's family, and the following brief sketch exhibits the respective relationship and genealogy.

Babajee Bhoslay, according to some accounts the illegitimate descendant from a Rance of Oudepoor, was hereditary Patel of several villages near Dowlutabad. He had two sons, the elder named Malojee, the younger Witojee; and Malojee, an active soldier, was employed during the year 1577, under the banner of Lookhajee Jadow Rao, a Muratha chief in the Bejapoor service.

His son Shahajee was born in the year 1593, and Malojee, taking advantage of a speech made by his leader Lookhajee on the occasion of the Holi saturnalia, procured the unwilling consent of that chief to the betrothal of his daughter Jeejee Baee to the young Shahajee.

An opportune discovery of a large treasure, or more probably the fruits of a successful foray in the Konkun, reconciled the contracting party to the unequal match, and enabled Malojee to purchase rank from the venal Court of Ahmednuggur. The nuptials between the young couple were duly celebrated, and in the year 1627, Shivajee the Great, the issue of this marriage, was born in the fort of Sheonere, near Poona.

Shivajee had four wives, and left two sons, Sumbhajee and Raja Ram. The former was beheaded by the Emperor Aurungzebe, leaving behind him a son of the same name; and Raja Ram was declared Regent of the Muratha empire in the year 1689, during the minority of his brother Sumbhajee's child.

This young prince was shortly afterwards taken prisoner by the Moguls, and although kindly treated by a daughter of Aurungzebe, who re-named him Shao,* he was detained as a captive in the emperor's camp.

After a brief but eventful career, Raja Ram died of fatigue in 1700, leaving two sons, Shivajee and Sumbhajee, and the former, although imbecile, and only ten years of age, was placed on the Gadee under the management of his energetic mother Tara Bae.

On the death of Aurungzebe in 1707, Shao the son of Sumbhajee fell into the hands of Prince Azum Shah, who immediately released the Muratha chief to serve as a counterpoise to the increasing influence of Raja Ram's family; and supported by the Mogul deputy in the Deccan, and many other influential parties, early in the year 1708 he seized Satara, where he established his head quarters, and claimed his inheritance as head of the Muratha nation.

Young Shivajee, his cousin, the son of Raja Ram, however, had still a strong party to the southward. During the monsoon of 1709 his adherents cantoned at Kolhapoor, and in the next year, after an unavailing attempt to proceed to the northward, it was determined to make that town and the adjacent fort of Punala the permanent residence of his Court.

In the year 1712 this young prince died of small-pox, when Ramchundru Punt Amatya, the ablest supporter of the Kolhapoor faction, and upheld by common consent, removed Tara Bae from the administration, and in accordance with Hindoo usage, placing her and her son's widow† in confinement, seated on the Gadee Sumbhajee, the son of the younger widow of Raja Ram.

The notorious Surjé Rao Ghatgay of Kagul now joined the party of Sumbhajee, and henceforward acted in the various conflicts which took place as an energetic partizan of Kolhapoor, under the orders of Cheya Koollee Khan, the Mogul viceroy of the Deccan, who was ever desirous to weaken the Muratha power by fomenting any internal quarrel and dissension.

The struggle for supremacy continued with alternate success during the following thirteen years, and at length in 1727 the Kolhapoor troops were entirely subsidized by the viceroy, large sums of money were advanced on loan, alliances were everywhere entered into, and great preparation was made for a vigorous and final campaign; but the Satara party, whose cause was now managed by the Peshwa Bajee Rao, gained the day in every contest, and on these repeated reverses, being abandoned by his allies Kanojee Angria and the

* Shao, honest man, in distinction of his grandfather's thieving propensities.

† Bhowanee Bae, the widow, was pregnant at the time, and the child afterwards in 1750 became Raja of Satara, under the name of Ram Raja.

Nizam, Prince Sumbhajee was in the year 1729 so utterly discomfited below the walls of Punalá as to be obliged to yield up his claim of Muratha sovereignty to Shao, and to accept the principality of Kolhapoor as a distinct and independent sovereignty, comprehending, with certain restrictions, the tract of country between the Warna and Krishna rivers on the north and east, and the Toongbhudra on the south, containing about 4,000 square miles, and yielding a revenue of Rs. 28,00,000.

The treaty now made was offensive and defensive, and provided for the division between the parties of such conquests as might be conjointly made to the south. But there never has been any great cordiality between the Kolhapoor and Satara Chiefs; and from the first a decided animosity has existed between the former and the usurpers of the authority of the latter, for within ten years of the abovementioned compact, the Peshwa Bajee Rao completely defeated the Gaikwar and his other rivals in a battle near Baroda, which left him the virtual head of the Muratha sovereignty.

From the year 1729, therefore, the separation is to be dated of the Kolhapoor principality from that of the elder and Satara branch; and the Kolhapoor princes, henceforward holding as little intercourse as possible with the detested upstart servants of their family, although often brought in collision with their power and intrigue, proceeded on a tedious course of piracy and warfare with the Desaces of Waree, and the chiefs and Jageerdars in their immediate vicinity.

During an existence lasting little more than a century, this small principality has successively and rapidly progressed through the various phases of feudalism, despotism, and anarchy.

Forming for a time an integral portion of the Muratha empire, her principal nobles at the period of separation were closely connected by ties of blood with those characters who so nobly supported the national name in the armies of the Peshwa; and the distinguished families of the Ghorepuday, the Chowan and the Gaikwar, the Powar and the Bhoslay, all had their representatives among the hundred feudatory barons of Kolhapoor, who also, enjoyed their large fiefs entirely for military service, and preserved their rights and privileges with equally zealous care, but who nevertheless joined heart and hand with their prince on any pressing emergency, and who during a period of eighty years struggled most manfully for the independence of their country.

Impoverished at length by the protracted wars, and unable under the British Government to recruit their finances as heretofore by marauding forays beyond the frontier, the estates of the nobility gradually passed into the hands of the bankers; and the proud chieftains, who during the preceding years paid even an unwilling homage, sunk into the mere minions and vassals of a prince, who reigned for a season of twenty years on a term of the most capricious despotism.

On the demise of the ruler, being left without a controlling power, the ill-cemented mass tumbled into confusion, each fragment jarring against the other in the crash, and a period of utter anarchy followed, which was only reduced to order by the prompt interference of the paramount authority.

During the entire period of her existence, however, little change has been experienced in the manners and customs of the principality; and if a more peaceable state of feeling has been accomplished in the minds of her inhabitants, the state of literature and the arts has somewhat retrograded.

Formerly Kolhapoor bore considerable weight throughout the peninsula for the learning of her Pundits, and the sanctity of her ancient temples. Original works are said to have issued from the pens of her erudite preceptors, and pilgrims flocked from afar to visit the shrines of Yellumma and Ambabae, and to the sacred heights of Jotee; but the stern necessity of the times proved unfavourable to the votaries of all learning with the exception of astrology: continued scenes of violence scared the pilgrim from his venerated haunts; the tale of innovation in foreign parts became scarce; and whilst in other portions of Hindustan science was shedding a faint gleam on a benighted nation, its complete isolation tended to enwrap this little State in comparative darkness.

From the first the Kolhapoor Government was modelled on the system introduced by the great Shivajee, although the chief feudatories of the State, who had been transferred along with the sovereignty, having possessions and interests in other countries, or still enjoying their estates in Kolhapoor only on the Mogul or Satara Sanud, did not settle down for a season as very peaceable subjects; and addicted to war from olden times, and, in the language of Tacitus, "more lavish of their blood than their sweat," the nation rather resembled a band of robbers, who preyed without remorse on their weaker neighbours, and gradually assumed a proprietary right in all they had the power to destroy or molest.

But the practice of depredation altogether tended to strengthen the bonds of the small community: frequent and common danger rendered valour and fidelity subjects of national admiration, and materially served to unite the people by a close and clannish feeling, which entirely precluded all idea of seeking livelihood in foreign countries.

In accordance with the principles which had operated so favourably for the great founder of the Muratha empire, the village system was continued in its original purity: Panchayets decided pressing civil suits, and the administration of the Government was delegated to eight subordinate officers, whose rights, contrary to the spirit of eastern legislation, became hereditary. The district of Vishalgur, with the title of Pruteenidhee, was conferred on Bhugwunt Rao, the grandson of Purushram Trimbuk; the office of Punt Amatya, with the Jageer of Bowra, was bestowed upon Ramchundru Nilkunt, who under Raja Ram had successfully carried the fort by assault; the office of Senaputee was conferred upon Shidojee, the nephew of the great Santajee Ghorepuday; and the

remaining offices, similar to the Ashta* Prudhans of the Muratha empire, were duly conferred chiefly on the relations of those who had distinguished themselves during the period in which Hindoo emancipation was effected.

Under these chiefs Kolhapoor gradually assumed a respectable solidity: the secluded locality of the principality was highly favourable to its national integrity, and her Sirdars, plunged in continual border warfare, had neither time nor inclination to engage in the schemes and contests of the greater powers of Western India.

The mass of people entertained an enthusiastic veneration for the reigning dynasty, and all the details of government were most efficiently conducted by the Junta, although Prince Sumbhaje, who was at all times ready to mount for the foray, was accused of spending too great a portion of his leisure hours with dancing girls, and of dissipating his revenues in drinking and debauchery.

The formation of the country also added greatly to her independence. The frontier forests were exceedingly difficult of approach, and the summits of her Ghauts were formed into national strongholds.

Many of these had been improved by art, and from the earliest times the mountain fortresses of Punala, Vishalgur, Bowra, Rangna, and Bhodurgur have been considered among the strongest in India. All contained springs of pure water, and ample reservoirs, and in Native warfare their weak garrisons could defy powerful armies, and were alone accessible to gold or stratagem, to treachery or famine.

The garrison was composed of mixed classes, as mutual checks, and the whole, termed Gurkurees, were subsisted by hereditary assignments of land, generally in the neighbourhood, in which the ruler maintained an interest, and a portion of the proceeds, more, however, as a means of coercion than as a source of revenue.

The Ramoosees, Mangs, and Mahars were the scouts; the Murathas formed the fighting portion; and all relied for their daily bread on the charge of their post. In their own terms, "the fort was the mother that fed them."

Besides these protective forts, every village contained its distinct party of able-bodied militia, who held small lots of land on a service tenure; and crowds of these military ryots, trained from youth to the use of arms, eagerly assembled to support the regular standing army of the State when called upon for the defence of their land, or for a marauding foray into the enemy's country; and from the earliest times an army of 20,000 men could be brought into the field on a very short notice.

** Names of original Ashta Prudhans, with Descendants at present.*

Peshwa.—Abolished in 1818; no descendants in Kolhapoor.

Amalya.—Descendant in present enjoyment of title and Jageer.

Sucheo, Bhotekur.—Abolished; descendant enjoys a small Jageer.

Muntree, Poondur.—Abolished in 1844; no descendants.

Senaputee, original Jadav, now Ghorepuday.—Descendants enjoy title and Jageer.

Soomunt, Hunmunt.—Abolished in 1844; title still retained.

Nayadhish Naya Shastree, Acharya.—Abolished in 1844; title not retained.

The destruction of the State records in the year 1812 has necessarily reduced the history to a very meagre annal, and has wholly consigned to oblivion all accounts of the first thirty years after the separation. There are few monumental records now remaining of the battles which tradition has handed down as occurring during this period, but no event of magnitude appears to have happened to break a monotonous detail of petty intrigues and plunderings, which, however, left Kolhapoor of similar extent and importance as at the date of its elevation to an independent State.

In December 1760, after a reign of thirty-four years, Sumbhajee, the last lineal descendant of Shivajee, died without issue, when it was resolved in the council of his widow and her eight ministers, that, according to the expressed wish of the deceased prince, the son of Shahjee Bhoslay of Khanwat* should be adopted as heir to the Kolhapoor territory; and letters and envoys were despatched to conclude a negotiation, which was interrupted by the menaces of the Peshwa, who was desirous to reunite Kolhapoor and Satara into one principality.

Failing in the legitimate course of arrangement, the Kolhapoor Durbar determined upon kidnapping the youth destined to royal preferment. The enterprise, entrusted to the women of the palace, was successfully executed, and the boy, seduced by kindness and caresses from the house of his parents, was carried off by forced marches to the fort of Punala, and, in pursuance of the intrigue, the queen with 5,000 followers and a large retinue of Mankurees† proceeded under pretence of making the pilgrimage to Benares.

The Poona Court was unprepared to meet the odium attaching itself to this decided step. The party was accordingly met at Jejooree by the Peshwa, Mahdow Rao Bullal, who, after great solicitation, was at length prevailed upon to admit of the adoption, according to the terms of the treaty entered into in 1750‡ with Shao Maharaj of Satara. The pilgrimage to the holy city was duly abandoned, a daily allowance of Rs. 1,500 settled for the Kolhapoor party during their sojourn at Poona, and a favourite diamond ring (which is still preserved in the Kolhapoor treasury) was given by the Peshwa as a pledge of continued favour and affection.

After a residence of two months at the Muratha capital, to await the concurrence of her ancient ally the Nizam, the queen returned to her own estate,

* A descendant of the tenth son of Bhosajee, the common ancestor of the Bhoslays, and who claimed descent from the famous Bapa Rawul of Chetoor, who reigned over Rajpootana in the year 134 of the Christian era.

† From ancient times the Deshmooks, Desaces, and the other rural chiefs, whether they acquired authority by birth, or as collectors of revenue, or as military leaders holding lands in wild and secluded quarters, were allowed, on paying their tribute, or furnishing their quota, to continue to their posterity their estates and rule; and from these chiefs are descended the Mankurees, literally great men, many of whom claimed superiority to the reigning family.

‡ This paper directed that the Kolhapoor State should always be considered as an independent sovereignty.

bearing with her the written agreement from the Peshwa for the adoption of the child, together with a sum of Rs. 4,00,000 in money and jewels, which had been presented to her on the occasion.

In the month of October 1762, the ceremony of adoption was performed at Punala,* with unusual magnificence : much treasure was expended on the occasion ; magnificent presents were given to and received from Hyder Ali, the Nizam, and all the neighbouring chiefs ; and the youth, under the name of Shivajee, was placed on the Gadee of Kolhapoor, amidst general rejoicings.

Bhugwunt Rao of Bowra was now invited to conduct the affairs of State. The brave Amatya, however, declined the post, adding somewhat uncourtously in his letter that there was little sincerity to be found in the words of a woman ; and the queen, highly incensed, informed the chief in her answer that the business she required could be performed even by despised women, and actually formed a junto of five of the palace handmaids, who with Bajee Punt, an old Karkoon of the family, nominally performed for a season all the functions of Government.

Under this administration, great irregularities of course prevailed, and free scope was allowed to the plundering propensities of the nation : armed Pra-hows issued in fleets upon the passing merchant ship from every creek on the western coast, and the marauding horse of Kolhapoor carried their excursions far over the river Krishna into the territory of the Peshwa.

In secret alliance with the Nizam, however, and surrounded by her great feudatories of Vishalgur, Bowra, Kagul, and Kapsee, who held on military tenure the districts on the immediate confines of the State, on whom the brunt of the existing feuds was chiefly expended, and who guarded almost every pass into the country, the sovereign lady was allowed to remain unmolested in the indulgence of all the pomp and ceremonies of a Court at Punala,† which claimed the highest privileges and pretensions, and whose lavish expenditure was amply supplied, not only by the lawful revenues of the country, by bribes and presents from the contending factions of the Muratha and Mahomedan powers, but also by a large share in the wholesale robbery which was carried on by sea and land.

*. Vide letter No. 1 in Appendix, from the Peshwa Bajee Rao to Bacc Saheb.

† The triangular terrace on the summit of the hill has been fortified from a very ancient date, and evinces a gradual progress in the art from the rude Polygar fortalice and the gigantic scarp of the Hindoo to the battlemented walls, the ponderous bastions and gateways, and the encircling *troces descoups* of the Moslem.

The walls encircle a circuit of $5\frac{1}{4}$ miles, and the hill has been carefully scarped in those places where the columnar basalt has not provided a sufficient barrier to escalade.

The ordinary establishment entertained for this fort consisted of 845 men-at-arms ; 100 pieces of ordnance were planted on the towers ; extensive granaries have been erected, capable of holding 25,000 candies of grain ; and a never-failing supply of excellent water rendered the place impregnable to a Native force.

From a copper-plate inscription, the fortress appears to have been in the twelfth century in the possession of a Hindoo prince called Bhoj. The Mahomedans obtained possession of

Piracy, indeed, rose to such a height, as to induce the dispatch in the year 1765 of an armament from Bombay, and the capture by the British Government of the fort of Malwan; and in order to circumscribe its power, and punish its aggressions and intrigues with the Nizam, the Peshwa Mahdow Rao Bullal for a time forcibly dispossessed the State of the districts of Chikoree and Munolee, which were transferred to the family Jageer of the Putwurdhuns.*

The Queen Jeejee Bae died during the month of February 1772, after having been at the head of affairs for a period of eleven years.

During her administration the fort of Malwan was recovered on the payment to the British Government of a sum of Rs. 3,82,896 for all losses and expenses sustained. The disputes with the authorities of Kagul, Vishalgur,† and Wurgaum were settled with a strong hand, the rulers being dispossessed of their Jageers until they proved obedient. The great temple on the bank of the river Punchgunga was built at an expenditure of Rs. 30,000, to the memory of her deceased husband Sumbhaje. The districts of Chikoree and Munolee, which had been attached by Mahdow Rao Bullal, were restored to the State among the last acts of the Peshwa, who, it is said, informed the envoy that his last fatal sickness was produced by the curses of the Princess, whom he had annoyed, and Kolhapoor altogether sustained a reputation which preserved her integrity from external aggression.

A foul blot, however, will eternally stain the character of this lady, who otherwise merits honour for her talent and decision. Human sacrifices were encouraged to a fearful extent during her reign, and parties scoured the plains at night to procure the victim, who was to be sacrificed within a few hundred feet of her palace.

The temple to the infernal deity was situated in the inner fort, where the walls of two towers close together, and where every ray of sunshine is intercepted by the dense foliage of the overhanging trees. Dark, dismal, and lonely, the spot appears suitable for the vile purpose for which it was used, and to this day the Black Tower of Punala enjoys a most unenviable notoriety.

Shortly after the demise of the queen (1772), disturbances broke out in several directions, and the neighbouring chiefs, gathering like eagles to the

it about the thirteenth century, and, whilst located in considerable numbers, greatly improved the fortifications. The fortress afterwards fell into the hands of the great Shivajee, and was unsuccessfully besieged by Aurungzebe in 1701, when he was visited by the English envoy, Sir William Morise, who wasted the large sum of £80,000 in fruitless negotiation with the Mogul emperor. For many years the fort formed the seat of the Kolhapoor Government, and the residence of the Kolhapoor Princes. It was breached and taken in a few hours, in 1844, by the British force under General Delamotte, and has since been completely dismantled, though still continued as the head station of one of the districts.

* From this period may be dated the commencement of the petty warfare with the Putwurdhun family, which was so long and so rancorously carried on.

† Vide letters Nos. 2 and 3 from old Records.

carcase, strove to increase their stores by the plunder of the country, and revenge themselves for ancient grievances during the minority of the young Prince Shivajee, who, under the direction of his tutor and spiritual teacher,* resided within the fortress of Punala.

Foremost among the enemy appeared the Poona Powar and her numerous partizans, who were located on the confines of the State. A large body of Poona troops was employed for a time on the eastern bank of the river Krishna, and the great spoliation called forth a spirited remonstrance† from the Kolhapoor Durbar, when, finding the feeling of the country engaged with the Bhoslay house, and having other more important matters to settle, the Peshwa withdrew his troops, although the annoyance from his partizans still continued in full vigour. An alliance,‡ however, with Hyder Ali, who was at this time infesting the Carnatic, tended considerably to preserve the balance of power, and the energies of the nation were successfully exerted to contend with her more immediate enemies.

In 1773, a raid was made into the heart of the country by Konher Rao Trimbuk, Putwurdhun of Koorundwar, who, after destroying many villages, was defeated at Bhoj by the minister Yesajee Sindia, and driven across the boundary with the loss of two guns; but in another direction the Kolhapoor troops were totally defeated by the Pruteenidhee of Kurar, with the loss of their standards, and two elephants. A further reverse was sustained from the gathering of Ramchundru Gunesh Dhere, and in the fall of the same year the Putwurdhun Konher Rao again overran the country, and beleaguered the town of Kolhapoor for a period of seven days.

On this occasion he burned and pillaged the celebrated Muth which was situated in the suburbs, when a rich spoil was taken, the property of the affluent inhabitants of the city, who, trusting to the protection of the holy sanctuary, had stored their most valuable effects within the sacred walls.

On the outrage being committed, the chief priest left the Muth, and, proceeding to the village of Shengaum, buried himself alive, invoking the curses of his deity on the sacrilegious Putwurdhun; but notwithstanding the malediction, Konher Rao carried off an immense treasure in safety to his own country.

In 1777, stirred up by the intrigues of the Poona Court, the Chiefs of Kagul,

* Some time after the death of his mother, being troubled by a painful boil, the young prince dreamt that a stranger Gooroo, after repeating a spell over him, had touched the affected part, and on awaking, the boil had disappeared, to his complete relief.

In the person of Seedheshwur Baba Maharaj, the great saint of Nursingpoor, whose remedies and incantations were extensively patronized by the Peshwa and Sindia, the stranger Gooroo was recognized, and henceforward one of his family remained as spiritual director of Kolhapoor, in the enjoyment of considerable grants of lands, which were conferred upon him by the prince.

† Vide Nos. 4 and 5, Selection from old Records.

‡ Vide Nos. 6 and 7, Selection from old Records.

Bowra, and Vishalgur* rose against the minister, strengthened, however, by an alliance with Angria, and assembling an army of 25,000 men. Yesajee Sindia Sena Saheb quickly brought the rebels to reason, and after overrunning the districts of Malwan and Inchulkurunjee, and crossing the river Krishna, he signally defeated a large army of the Peshwa, under the command of Jewajee Gopal Joshee, who had been sent to re-occupy the districts of Chikoree and Munolee.

The results of this victory were disastrous to the conquerors, as Mahadajee Sindia was immediately detached with an overwhelming force from Poona, and this energetic chief, suddenly marching upon the city of Kolhapoor, committed great damage throughout the territory, and was only induced to withdraw the Poona troops on a promised payment of Rs. 15,00,000 for losses sustained during the late foray by the subjects of the Peshwa,—the districts of Chikoree and Munolee were taken as security for payment,—and on an agreement being made to abstain in future from plundering the adjacent countries, from receiving Poona rebels into Kolhapoor, and from maltreating the frontier feudatories.

The policy of the Poona Court with respect to the principality appears to have been very variable, and greatly depended on the individual character of the Peshwa, and on the degree of repose enjoyed at the time by the Poona Durbar.

Kolhapoor, however, was always regarded in the Deccan as a species of hornet's nest, and looked upon with a degree of fear and suspicion, as a country from

* The earliest tradition regarding this fort, which was then called Khilna, relates to its possession, about the year 1000, by a king called Bhopal, who excavated a tank, which still bears the name of this prince. By inscriptions and old papers still extant, the fortress appears to have been taken by the Mahomedans in the year 1234, and then called Vishalgur, and afterwards being annexed, it remained under the Beejapoor Government until its capture by the great Shivajee and a band of his Mawuls. Shortly after the murder of Afzul Khan, Shivajee took shelter in its strength, and stood a successful siege from the Beejapoor army, and on their retreat, 55 villages in the Konkun, which number was increased to 90, were apportioned for its expenses, and many of the hereditary lands granted to the Gurkurees in these settlements were in the possession of their descendants at the outbreak in 1844.

The fort was frequently used as a place of refuge by Sumbhajee, who erected two strong towers, at an expense of Rs. 10,00,000, and by Raja Ram, who built stables for 12,000 horses, and it twice successfully withstood the whole force of Aurungzebe, although suffering great loss during the siege, as it is related that on the retreat of the Moguls 700 Suttees took place among the wives of the garrison who had fallen.

Until the outbreak in 1844, the fortress was the residence of the Kolhapoor Pruteenidhee, when it was completely dismantled and destroyed. The former fixed establishment of this fort consisted in 1,200 foot, 100 horsemen, and 18 guns, with a supply of grain for two years in the granaries.

The following inscription in Persian is inscribed on the great mosque :—

“ A Muratha king, named Bhoj, possessed the fort. J, Mulik Rahan, came and unsuccessfully besieged it six times; in the seventh attempt I took it. Be courageous, and thou shalt prosper.”

which little but hard knocks could be expected. There were no rich towns to be sacked; its numerous impregnable forts precluded all idea of lasting conquest over a nation who fondly clung to their ruling dynasty, and who were always eager to fight. Every family of distinction also possessed relations in the camp and the court, and her position and connection with Satara and the Konkun, and the rich Southern Muratha country, rendered her neutrality at least a most desirable object, amidst the continuous intrigues and open warfare of the Poona Durbar.

Thus, although under-hand influence in fomenting dissension and arraying the border chiefs and the Putwurdhun family against her authority was at all times exerted to restrain the State from foreign alliance, or from conquest beyond her bounds, until Kolhapoor became involved with the Poona Court by repeated acts of aggression, she was left undisturbed, and, even after her marauding expeditions, was always allowed fair terms of settlement.

Neither were these overt acts of contumacy few or far between: from the commencement of her independence, whenever any opportunity offered, either from a fancied slight, or from an unavenged feud, or when the Poona partizans were off their guard, the Kolhapoor troops immediately crossed the border, and laid the country under contribution.

During all the attempts of Raghoba, particularly to assume his nephew's seat of power, Kolhapoor remained in a state of more than usual ferment; intrigues were continually entered into with the aspirant and with Hyder Ali, and promises of co-operation liberally made; but the desire of glory in the battle-field, or of assisting Raghoba to the Poona palace, succumbed on all occasions to the more humble desire of private gain and private revenge.

During the year 1777, the Mysore Prince came in person to Kolhapoor, to give greater confidence, tendered the aid of a large party of his army, and advanced the sum of Rs. 1,00,000;* but although completely committed in the alliance, the presence of Mahadajee Sindia† overawed the Kolhapoor authorities, who never allowed their troops to venture far beyond their limits, and who appeared rather desirous, through continued correspondence, to extort further supplies of money from Hyder, or to obtain it by marauding forays.

Although disgusted with the timid behaviour of his ally, Hyder nevertheless kept faith‡ with the Kolhapoor Prince, and at his express request a Kolhapoor Vukeel attended, on the treaty being eventually concluded in 1780, when the good will of the principality was considered to be worth the cession of the districts of Chikoree and Munolee, which were, however, retained until the liquidation of the contribution of Rs. 15,00,000 formerly levied.

On the departure of Sindia (1777), the Putwurdhun Purushram Ramchundru of Meeruj attacked the town of Akewat, which was for a time courageously

* Vide Selections Nos. 9 and 10 from old Records.

† Vide Selection No. 11 from old Records.

‡ Vide Record No. 12.

defended by two gallant brothers ; but the inhabitants, being unsupported from head quarters, and becoming pressed by famine, and the two brothers being shot in an assault, the place surrendered, and was forcibly taken possession of ; and, on the western frontier, the ruler of Waree* continued his intrigues to foment disturbance, which the existing connection between the States rendered easy, and which hereditary enmity strove to accomplish.

Internal dissension was also added to foreign aggression, and a plot to assassinate the minister was formed by certain discontented Mankurees of Vishalgur and Nerlee. The intended assassins, however, were timely discovered, whilst hiding in the palace, and the bloody attempt was met by a barbarous punishment, the eyes of two of the principal conspirators being summarily scooped out, and the remainder of the band banished to their respective estates.

Persevering in his continued aggressions on the eastern frontier, and making himself master of the town of Sherole (1779), Purushram Ramchundru† now instigated the Ghorepuday of Banghapoor and others to successful rebellion, assisted them with his troops in their resistance, and henceforward, under the open auspices of the Poona Court, steadily pursued a system of plunder and aggrandizement at the expense of the Kolhapoor State.

In addition to the constant irritation arising from these vexatious inroads, during the year 1780 a serious mutiny broke out in the fort of Bhodurgur. Alarmed by a new revenue survey, the Gurkurees drove the Mamlutdar out of the fort, and successfully repelled the repeated assaults of 2,000 men, who were despatched from head quarters to the assistance of the authorities.

The Sawunt of Waree, marching to support the mutineers, was, however, defeated under the walls of Rangna, by the troops of Vishalgur and Bowra, but the rebel Gurkurees, supplied with money by the Desaees of Nerlee, after resisting for a period of twelve months all attempts from Kolhapoor, and having at length utterly exhausted their means and supplies, rendered up the fort to the Putwurdhun Purushram Ramchundru, and, on receiving the amount of the money which had been expended during the siege, admitted his troops into his stronghold.

Yesajee the Sena Saheb died in 1782, leaving the little State considerably shaken by the successful inroads of foreign marauders, and deprived of one of her most powerful bulwarks to the southward in the fort of Bhodurgur.

* Sukun Sawunt is said by Hamilton to have been the first of the family whose name is Bhoslay, and a Naik in the service of one of Sumbhajee's Soobedars, but the Sawunts were originally hereditary Deshmooks of Waree, and acquired the title of Bahadoor from the Kings of Beejapoor. For a time they transferred their allegiance to the great Shivajee, but on his meeting with reverses, they resumed their allegiance to Beejapoor, and on the dissolution of the empire were left independent.

† Vide Records Nos. 13 and 14.

He was succeeded in his ministerial office by Rutnakur Punt Apa, who had risen from the humble situation of a Karkoon to the Potnis, to be the head of the military department, and whose talents and fortitude altogether exercised a salutary effect on the destinies of his native land.

His first act evinced vigour, and influence over the young prince.

Turning his attention to the bitter feud which existed with Waree, nominally on account of disputed villages in the Talooka of Malwan, and the privilege of using the peacock feather which had been obtained for her husband Kan Sawunt by Luxoomee Baee,* niece of Mahadajee Sindia, he persuaded the Maharaj to quit Punala,* and lead his forces in person to the field. The descent was rapid, unexpected, and perfectly successful; and the Sawunt, being compelled to pay the balance due to Kolhapoor, the title of Himmuto Bahadoor, with a Jageer, was bestowed upon Pritee Rao, the son of the famous Oodajee Chowan, an ancient retainer of the family, for his distinguished conduct during the expedition.

For a sudden foray, and individual skill in the use of their weapons, the Kolhapoor army was indeed long famous throughout the Carnatic. They were said to carry off the palm even from the veterans of the Peshwa; and until the introduction of European discipline into the Poona army, they seldom avoided any fair fight in the open field.

Practised from earliest youth in the Botalee, the lance was the favourite national weapon in after life; and defended with a variety of armour, composed both of metal chains and quilted cotton, with the addition of his sword and shield, the Kolhapoor horseman was always a formidable enemy to encounter in the plain. Battle-axes† of strange and fantastic shape were also at this time frequently carried, to use when the lance was shivered. Commissariat was little heeded, supplies being gathered on the spot with a strong hand. The saddle formed the pillow of the hardy partizan, and when further inflamed by the hope of plunder, in addition to the ranklings of the national feud, fatigue and danger were unheeded in the attainment of his object.

Shortly after the return from the Konkun, the seat of the Court was removed to the city of Kolhapoor, and interference with the rights of the Gurkurees induced a mutiny in the fort of Bowra. The royal forces were again successfully resisted by the rebels behind their scarp defences. The Maharaj marched in person from head quarters, but being twice fired upon whilst

* The fort of Punala was considered to be impregnable, and alike secured from all fear of attack, not only from the strength of the fortifications, but also from the sacrifices to the evil powers which had been offered. I have seen a Sunud, granted to an oil vender, giving him in perpetuity a lot of land for making over to the authorities his daughter-in-law, to be buried alive below the foundation of one of the large towers, as an offering to the Goddess of Destruction.

† The extraordinary weapon called Punhayatu was used in assaults of towns and forts, and in close quarters in piratical warfare: it is of the shape of a gigantic cleaver, and would require a very powerful man to wield.

endeavouring to address the mutineers, and unable to obtain an entrance, he withdrew his forces; temporizing measures were adopted, the terms sought for, restoration to their original rights, were granted to the Gurmurees, who then sought pardon for their misconduct, and were ultimately allowed to hold possession of the fort.*

In the year 1786 Prince Shivajee was disturbed during the celebration of his nuptials with the daughter of Rutnajee Rao Khanveelkur, by a rebellion of the Gurmurees in the fort of Samangur,† who, instigated by the Sawunt of Warce, had shut their gates, and defied the royal detachment.

On the appearance, however, of the Maharaj, the garrison surrendered at discretion, and the intrigues of the Sawunt having been satisfactorily brought to light, it was forthwith resolved to carry the war into the enemy's country.

Speedily assembling a large body of troops, and supported by his Sirdars, Shiva^{je} marched during the month of Kartik (November), and descending the Ghauts, overran with rapidity a great portion of the Konkun, storming Bhurutgur, Nivtee, and Vishalgur, and appointing governors and Mamlutdars to the newly conquered country. The Maharaj returned to Pynala after a most successful foray, having forcibly acquired possession of territory which was hereafter called the Duroonee Mahal, yielding an annual revenue of Rs. 1,50,000, and enjoyed for a period of seven years, until restored in 1793 on the intercession of Mahadajee Sindia.

During this expedition to the Konkun, the Bhoslay of Anoor, assisted by the discontented Chief of Nesree, a younger branch of the Toregul family, had assembled a hostile force among the Western Ghauts, whither Rutnakur Punt now proceeded to quell the insurrection.

By fair promises of settlement, having induced the Bhoslay to quit his followers, and visit him in his tent, in the spirit of the times, the minister, without any scruples, caused this chief to be waylaid and murdered whilst returning to his camp. The rebel army was immediately attacked and dispersed during the panic occasioned by the death of the leader, and this success

* The hill fort of Bowra rises perpendicularly from the Konkun, and presents most formidable difficulties in its high scarps to any attacking force.

The former establishment consisted of 25,000 horse and foot. The fort was originally taken by surprise by Ramchundru Nilkunt, the founder of the Bowra family, and remained in their possession until surrendered in 1844 to the British troops, when the fortifications were completely dismantled.

† The fort of Samangur was thoroughly repaired by the great Shivajee in 1676. It had been besieged without success by the Hyderabad troops, who beleaguered the fortress for twelve years, and by the various Putwurdhuns, assisted by the Poona troops. The marauding Chiefs Tambur and Wad, and the brave Chief of Nepanee, also failed in all their attempts at possession. It was always accounted the smallest and most impregnable fort in Kolhapoor, and was taken by the British troops in 1844 after a few hours' battering from the breaching guns.

being followed up by the capture of Wulubgur, Bheemgur, and Gundhurgur, and the Nesreekur being compelled to fly the country, Rutnakur returned triumphant to Punala.

For the succeeding five years Kolhapoor enjoyed a partial rest from any foreign aggression, and the crown revenues were considerably increased by the attachments consequent on the frequent rebellion and misdemeanour of its chiefs, only, however, to be squandered in lavish profusion on a royal pilgrimage to Tooljapoor,* and in the nuptial ceremonies of one of the Princesses to Yeshwunt Rao Ghatgay,† of Kagnl, whose Mogul Sunuds for his Jageer were now confirmed by the Maharaja.

During this period the conditions of former treaties remaining unenforced, the depredations of the Sawunts on the high seas had increased without check, and the Kolhapoor authorities also again returned to their old habits.

During the year 1789 the Bombay Government determined to crush the piratical powers, but, in their anxiety to avoid giving offence to the Poona Court, a doubt arose as to the propriety of attacking Kolhapoor, which was supposed to be a dependency of the Peshwa; and Nana Furnavees, taking advantage of the reference made to him, endeavoured to draw the Kolhapoor State to seek the Peshwa's protection, and ultimately to yield obedience to the Poona Government.

At first the Raja appeared inclined to accept the mediation, but suspecting the design, and hearing that the English were to be engaged with Tipoo, he revoked his consent, and piracy was never more rife than during the war with Mysore.

In the year 1792, however, a force was fitted out from Bombay to carry out stringent measures along the Western Coast, but a humble apology was tendered and accepted, and a treaty formally concluded, by which permission was obtained for the establishment of British factories at Malwan and Kolhapoor, and the territory forcibly acquired from Waree was peaceably restored through the intervention of the Peshwa.

In the following year (1793) Purushram Ramchundru, who had lately returned from co-operating with the English in the reduction of Mysore, continued to harass the Kolhapoor State, and in the month of January his troops, under his son Ramchundru Rao, devastated the eastern frontier, and encamped

* Bhowanee, Goddess of Tooljapoor, is the Kool Swameenee, the tutelar divinity of the royal family of Shivajee the Great. A Chowghuda (kettle-drum) and other establishments are maintained in honour of the goddess, at an annual expense of Rs. 1,000.

† The founder of the Ghatgay family was Kamdeo, of the Ratpoo or Rajpoot race, a distinguished retainer of Yusoof Adil Shah, the last King of Beejapoor, from whom he received the Jageer of Kagnl, with a grant of 67 villages, which were further confirmed by the Sovereign of Delhi on his conquest of Beejapoor.

The name of Ghatgay was obtained from the destruction by Kamdeo of a famous marauder, called Ghat, who, at the head of a large band of desperadoes, for a long time infested the Konkun, stopping the roads, and plundering the merchants and travellers.

before Alte. The force of the Putwurdhun was speedily encountered, and totally defeated by the Maharaj, who, on the predictions of his astrologer,* personally headed his army in the fight which ensued below the walls of the town, and Ramchundru with his principal officers were captured and carried prisoners to Kolhapoor.

They were, however, treated generously by the prince, their wounds were skillfully attended to by the palace physician, and, being presented with jewels, horses, elephants, and dresses of honour, they were dismissed in peace to their own country.

But the rancorous spirit of the elder Putwurdhun was in no way soothed by this act of kindness on the part of Kolhapoor; and, disregarding the entreaties of his son, who declared he would not again draw sword against the Chutruputee, he collected his scattered followers, and again crossed the frontier.

Much desultory fighting ensued, to the advantage of Purushram, who succeeded in laying close siege to the city of Kolhapoor, and was only induced to raise it, and conclude a peace, on the Maharaj binding himself to give Rs. 3,00,000 as the price of exemption from plunder, and to make over as hostages† a body of Kolhapoor chiefs until the money was paid into the treasury.

The complicated intrigues at Poona which followed the flight of Nana Furnavees, and ended in raising Bajee Rao to be Peshwa, now occupied the entire attention of the greater powers; and, taking advantage of the cessation of internal feuds, and being now secretly incited by Nana Furnavees himself to attack the districts of Purushram Bhow, and to create a hostile demonstration in favour of Bajee Rao, the Maharaj prepared to employ his legions on a series of extended forays, and to enrich himself amidst the anarchy which prevailed throughout the Southern Muratha Country; and having called out the entire force of the State, he proceeded to settle a few internal dissensions previous to his proceeding southward and eastward.

The Duroonee Mahal was restored to the Sawunt at the intercession of Mahadajee Sindia. Oodajee Ghatgay and Hybut Rao Gaikwar were secretly despatched with a portion of the gathering, and the fort of Bhoodurgur, being suddenly attacked during the night, was taken by surprise from the garrison of the Putwurdhun Purushram, who had now forcibly held possession of this stronghold for upwards of ten years. Chikoree and Munolee were again recovered from the Nepaneeekur, Bhasker Rao Trimbuk; a neighbouring chieftain

* Balacharya was the third in descent from a very learned Joshee, who received his instructions at Benares, and assumed Gunputee as his peculiar deity; and, foretelling the future reign of Raja Ram, was presented by that prince on his accession to honour with a small Jageer, the title of Joshee Rao, and the office of Astrologer to the State.

† The hostages were Oodajee, eldest son of Himmat Bahadoor, Narayen, son of the Rajadnya, and Dowlut Rao Gaikwar, who were detained for ten months, first at Tasgaum, and afterwards at Meeruj, until ransomed.

was forced to pay his arrears of tribute, and on their successful return, a village was bestowed upon the Ghatgay, and the title of Surkhuwas on Hybut Rao.

In the month of Kartik 1796, the Kolhapoor force, under the immediate command of the Maharaj, marched from Kolhapoor, and entered the enemy's country, plundering the towns of Hooblee, Wulubgur, and Nulamdhee, and after many skirmishes appeared before Tasgaum.

In the absence of their virulent enemy Purushram, and on the plea that the articles had not been duly carried out, as settled in the late treaty, his palace and the town of Tasgaum were thoroughly sacked, and committed to the flames, and the raid was successfully continued to Mandwee.

Whilst on the eve of returning to Kolhapoor, secret instructions were received from Nana Furnavees, that the fort of Jumkhundee was held by Bhasker Set Deo, contrary to his wishes, and that the employment of the Kolhapoor force against the obnoxious occupant would prove highly acceptable.

A progressive movement was accordingly ordered, and batteries were raised against the fort, which speedily surrendered; and being handed over to the Poona agent, the Kolhapoor troops returned in triumph to their own country.

The title of Rajadnya was bestowed on the minister for his gallant conduct on the taking of Jumkhundee, and he was dispatched with a detachment against the forts of Sowndulga and Birdee, which were also captured, with some loss, however, owing to the obstinate resistance of their garrisons, who had mined the principal towers, and blown them into the air as the assailants entered.

Amidst this continuous tumult and war, the Bramins following the example of the minister, personally engaged in the strife, the odour of sanctity evaporated in the daily contact, and the priestly order was not held in such high and holy repute as elsewhere. The temples, also, were frequently stripped of their ornaments to supply material for the army, and superstitious feelings were absorbed in the greater excitement of war.

Still, on all momentous occasions, the deities were appealed to; the vow was taken, and, in the enthusiasm of victory, it was duly performed. Grants of land, and presents of money and jewels, were liberally bestowed upon the favourite idol, and the highest in the land performed most painful pilgrimages, progressing on bended knees for many miles to the shrine.

Towards the close of the year, the royal force again proceeded like a flight of locusts towards the Carnatic. The district of Gokak was forced to pay a contribution of Rs. 1,20,000; tribute was also levied from Kitoor, and officers being left to manage the country, and collect the revenue, the king returned to Kolhapoor, distributing on this occasion, also, honours and rewards among all the chiefs who had in any way distinguished themselves.

The Satara insurrection of 1798 occurred shortly after these marauding expeditions, and the prince of Kolhapoor heartily engaged in the attempt of

the Raja to recover his power from the Peshwa. A negotiation was entered into for a respective family adoption, and on the capture of Satara by the Peshwa's army, the gallant Chutoor Sing, the Raja's brother, with a small band of faithful followers, escaped to Kolhapoor.

Joined by the Maharaj with a strong reinforcement from Punala, Chutoor Sing turned on the pursuing troops of the Peshwa, who had encamped near the river Warna, and cut them off almost to a man, and, proceeding to Kurar, the Kolhapoor troops again came in collision with those of the Putwurdhun Purushram, who were surprised, and totally routed.

During the return march, an unsuccessful attempt to assassinate the Kolhapoor prince was made, at the instigation, according to the current report, of the Putwurdhun. A man rushed from concealment in the village of Sheerala, and wounding Mansing Ghorepuday, the only Sirdar in attendance, made a desperate cut at Shivajee, who was resting in his palanquin. The sword, however, struck on the wood-work. Mansing, closing with the ruffian, secured him, after having received several severe wounds in the struggle, and the soldiers, hearing the disturbance, hastened up and dispatched the assassin. The villages of Husoor and Hebaul were bestowed on the spot in perpetuity on Mansing, and after settling the affairs of Boregaum and Asthee, Prince Shivajee returned to Punala.

Affairs in the Southern Muratha Country still remained in a most distracted condition, and a large detachment under the minister was dispatched for the purpose of plunder. During the first march a band of 400 Thugs was seized, and hanged or beheaded.* At Savanoor the Kolhapoor troops were, however, totally defeated by Dhondo Punt Gokhlay, and driven back ; but being joined by the Maharaj in person with reinforcements, Konoor was taken and sacked, the Desaee killed, and the force advancing, laid the country under heavy contribution as far as the Phatapoor district.†

During the year 1799, the interests of Nana Furnavees had induced a reconciliation with Purushram Punt, and previous to undertaking an intended expedition against Tipoo, who was always a favourite, and generally an express ally of Kolhapoor, Purushram was ordered by the Poona Court to watch the Raja of Kolhapoor, and restrain him as much as possible from devastating the country.

* For some years previous to this summary justice, very many persons were known to have been murdered ; but after the destruction of this gang, such was the salutary terror excited, that the province has ever since been studiously avoided by these miscreants.

† In the absence of the Kolhapoor army Luxoomee Bae, the wife of Mahadajee Sindia, at the head of a swarm of marauding horse and Rohillas, had, during her progress to the southward, plundered many of the Kolhapoor villages, and, for the purpose of extorting a ransom, seized the sacred person of Bowa Maharaj. The spiritual director of Kolhapoor was with difficulty released by the presence of the minister, who advanced by forced marches to the rescue, and a temporary friendship was afterwards patched up by a marriage between the illegitimate children of Sindia and the Kolhapoor Prince, Luxoomee Bae personally superintending the nuptials, which were, as usual, celebrated with reckless profusion.

He accordingly encamped in great force at Chikoree, and for three months continued skirmishes took place, to the disadvantage of the officers commanding the Kolhapoor detachments, and at length, in the month of September, when this feud had been sufficiently prolonged fully to exasperate the parties engaged, assembling all his men at one point, and accompanied by the chief officers of the State, the Maharaj joined the camp at Puthankoorree.

The choice force of the kingdom had been collected for the struggle, and, crowning the low hills above the village, presented a gay and lively appearance. Elephants with silver Howdas were conspicuously posted beside each commander, and camels in scarlet housings, bearing Jinjals and field-pieces, covered the entire front of the army.

The body-guard in chain armour, with sabre-proof head-dresses, marked the position of the Maharaj, whilst groups of horsemen, with their glittering pennons and spears, were interspersed at intervals between the dark masses of the foot soldiers.

The army, which consisted of 16,000 men of all classes, was drawn out in battle order, formed into four grand divisions, and commanded respectively by the Senaputee, the Ghatgay of Kagul, the minister, and the king in person.

The followers of the Putwurdhun were equally prepared. Purushram himself quitted the mimic game of war on the chess-board in his tent for the actual and earnest conflict in the field, and the fight commenced by an impetuous attack of the enemy's force on the division commanded by the minister, which was thrown into great confusion, the elephants and colours being taken, and many of the principal officers killed.

Encouraged, however, by the presence and the words of the king, the minister succeeded in rallying his retainers, and leading them in a charge which recovered the colours, and the division of the Senaputee, at the same time breaking into the enemy's camp, commenced an indiscriminate slaughter among the followers.

Purushram, hastening to the scene of confusion, was attacked by Narayen Rao Wishwas Rao, at the head of a body of cavalry, and mortally wounded in the encounter. His son immediately fled on hearing of his father's fate, and the army scattered in every direction.*

The funeral obsequies of the Putwurdhun were performed by one of the Kolhapoor Sirdars where he fell—the spot is still marked by the humble tomb which was built over his ashes; and after the downfall of his great enemy, and the settlement of affairs at Chikoree, the Maharaj returned in triumph to Kolhapoor.

Ramchundru, the son of the fallen chief, in disregard of his former oaths of

* Although strenuously denied by all belonging to Kolhapoor, it is generally reported, and received as a fact, that Purushram, when wounded and taken prisoner, was carried into the presence of the Raja, and barbarously cut to pieces.

eternal friendship, fled from the field of battle to the Court of Poona, and expressed his willingness to sacrifice all that he had in the world, and retire a naked mendicant to Benares, if he could only adequately revenge the slaughter of his father ; and the aid earnestly solicited was readily granted both by the Peshwa and by Sindia, who were more than ever anxious to repress the State of Kolhapoor from rising into importance.

The auxiliary force, which consisted of a large body of the Poona troops, with five battalions under Major Brownrig, from Sindia's disciplined levy, being joined by the old adherents of the deceased Putwurdhun, and led by his son Ramchundru, crossed the frontier, and encamped during the month of November at Sherole.

They were met by the minister, and somewhat worsted in the ensuing fight (1799), but receiving fresh reinforcements from the Putwurdhun's country, Ramchundru appeared at the end of the month in overwhelming force before the city of Kolhapoor.

A battle was fought under the walls, the Senaputec Narayen Rao was taken prisoner, the royal troops were driven within the fortifications, and Venktesh of Inchulkurunjee, withdrawing his retainers in this hour of need, and plundering the suburbs, retired to his own country.

A council of war was held in this dire emergency, and after a solemn appeal to the tutelar deities, it was finally resolved that the defence of the capital should be entrusted to the minister, assisted by the principal chiefs, and that the king, with a portion of the army, and all the royal family, should forthwith proceed to the impregnable fortress of Punala.

All classes took oaths of determined resistance. The town was apportioned for defence to the different chiefs, with their retainers. Messengers were dispatched to request assistance from Goa, and an embassy was sent to Poona to deprecate the anger of Sindia and the Peshwa.

The town of Kolhapoor had been originally strongly fortified, being surrounded by a granite wall, with bastions at regular distances, with a wide wet ditch, and rough glacis ; the gates were strongly defended, and all the entrances were over draw-bridges. Pritee Rao Chowan was stationed at the Beejapoor gate ; the minister held his post at the Gunga entrance ; and the troops of Bowra, Vishalgur, and Kapsee aided the large garrison in the defence of the walls.

The force which had marched with the Maharaj, remaining encamped below Punala, was attacked by the enemy, defeated, and driven into the fort, on the evening of the 3rd February 1800, with the loss of many Kolhapoor Sirdars killed and wounded, and among the rest of the two brothers Dowlut Rao and Wishwas Rao Gaikwar,* and the batteries of the enemy commenced playing

* Dowlut Rao was killed outright by a spear, and Wishwas Rao was taken prisoner, and put to death in the enemy's camp. Their bodies were recovered, and buried in the fort, where a temple was built to their memory ; and on the Maharaj paying a visit of condolence

on the walls of Kolhapoor on the 4th of January, shortly after which Dhondo Punt Gokhlay joined the besieging force, and encamped on the west of the town. The cannonade was continued for two hours every morning and evening, during a period of two months, and the fortifications, which gave way in many places, were zealously repaired and replaced by the defenders during the night.

On the 12th of March the guns played incessantly during the entire day and night, and a wide breach being effected, scaling ladders were applied, and the enemy moved to the assault.

The fire of the garrison, however, could not be silenced; the scaling ladders were hurled from the walls, and after a bloody contest, which lasted throughout the day, the enemy retired, with the loss of 3,000 killed and wounded, including several of Sindia's European officers, whose graves are still visible near the rampart of the town.*

In the evening, permission was granted by the minister for the undisturbed removal of the bodies from the trenches, and peremptory orders (owing to a fresh revolution at Poona) arriving that afternoon, Ramchundru, with his followers, secretly quitted the siege, and retired to the Carnatic, and the besieging battalions of Sindia immediately marched to attack the estates of the flying Putwurdhun.

On the following day the king made a triumphant entry into the city, and distributed large grants of money and land to the tutelar deities on this great deliverance; rewards and honours were liberally bestowed on the survivors, and every consideration was shown to the families of all who had fallen during the siege.

The intrigue which had prevented the capture of Kolhapoor was managed through the influence of Surjé Rao Ghatgay, to whom the Raja was reconciled, and provided for an alliance with Sindia, who was now bent on crushing the Putwurdhun family. The minister was accordingly dispatched with his victorious forces to the assistance of Shudjee Rao, the Chief of Nepanee, who during a series of forays in the Meeruj Jageer, undertaken on directions from Sindia, had unsuccessfully besieged the fort of Nerlee. On the erection, however, of the Kolhapoor batteries in front of the gateway, the place was evacuated by the garrison, and taken possession of for Nepanee, and the minister returned to meet Surjé Rao Ghatgay, who arrived from Poona, bearing with him the treaty which was to be entered into with Sindia. He also

to their mother, the lady Goojabee, she declared that she rejoiced in the death of her sons, which had been alike serviceable to the master, and honorable to themselves and to the author of their being.

* The following inscriptions in French and Murathee I made out on a tombstone which is lying near the breach:—

“ Jules Romen, né 1768, un citoyen de Languedoc, Commande. du Battn. de l'Armée de Scindia. Tué aux tranchées de Colapore, 23me Mars 1800.”

brought the two standards* which had been in former days captured by the Pruteenidhee of Kurar from the Kolhapoor troops, together with the permission of the Poona Court for the resumption by the Kolhapoor State of the districts of Chikoree and Munlee, and requested in return, for all his good offices and exertions during the war, the transfer to himself of the Kagul Talooka, from his brother Yeshwunt Rao, who had only held the fief since his late marriage with the Kolhapoor family.

The request was immediately complied with; villages were also presented to the Chief of Nepanee, and the birth of a son and heir, who was named Shumbhoo, added to the general rejoicing.

With the exception of one foray into the Konkun, induced by the family disputes of the Sawunts, and the movement of detachments after Dhondecha Wagh, who was levying contributions in the neighbourhood, a short peace succeeded; and although piracy continued, involving a blockade of the Konkun ports, refuge was afforded after their defeat to the brothers Ghatgay. Kolhapoor preserved a strict neutrality during the campaign of 1804, the Peshwa being considered with no friendly feelings, and a strong caution having been received from General Wellesley that it was time that the nations of India should enjoy some peace, and that the British Government would not suffer it to be disturbed with impunity.† All the extra revenue, however, was as usual expended on the marriage ceremonies of Aka Saheb Buya Bae with Narayen Rao of Nagpoor, and in a second expensive royal pilgrimage to Tooljapoor.

In 1806 the Pruteenidhee of Vishalgur dying without issue, the title and Jageer were bestowed upon his younger brother, Bhugwunt Rao, and the Maharaj, proceeding towards Malwan, stormed the Waree fort of Newtee, and after spending the Dusera in levying contributions, returned to Kolhapoor to celebrate the marriage of the young Prince Shumbhoo with the daughter of Narayen Rao Khanveelkur.

Shivajee had hardly quitted the Konkun when, crossing their boundary, the Waree troops burned the suburbs of Malwan, and were successfully encountered by the Kolhapoor force under Shid Rao Bhoslay, and the Maharaj, again assembling his forces, marched to Mahadeogur, which was taken, after sustaining a considerable loss. A complete victory was, however, gained over the Sawunt Waree troops at the village of Chowkeul, and from thence, proceeding to the jungles, the fort of Waree was besieged. The Sawunt appealed to the

* These colours were carried in the van of the fight, on an elephant which had formerly belonged to the Pruteenidhee of Kurar, and had been lately given by him to his cousin of Vishalgur, who was then with the Kolhapoor force.

Recognizing his favourite elephant, the Kurar Chief loudly called him by his name, when the animal, notwithstanding all the efforts of his driver, immediately rushed to his old master. The standard-bearers were cut down, and the colours captured.

† Vide Selection in Appendix No. 2 from the Duke of Wellington's *Murathée Correspondence with Kolhapoor*.

Peshwa, and the Kolhapoor Prince to Lord Minto. The Governor General declined interfering, but the Peshwa, less scrupulous, sought to take advantage, to the subjection of both States.

Acting under his orders, Apa Desaee again took possession of the districts of Chikoree and Munolee ;* the siege of Waree was forthwith raised, and the Kolhapoor troops fell back to defend their own dominions.

The war was now carried on above the Ghauts, and on the Kolhapoor town of Kutkole being seized by the Chief of Nepanee, and tribute enforced from the adjacent country, the Maharaj was compelled to meet this formidable enemy, who bore the name of the best soldier in the Peshwa's army.

The rival armies came together in 1808 at Sonegaon, when, through the treachery of the Kolhapoor Surlushkur, who held aloof from the fight, and from the superiority, also, of the Nepanee troops, a total defeat was sustained by the army of Kolhapoor. The commandant Chowan, and many of the principal Sirdars, together with 5,000 men, were killed, wounded, or taken prisoners ; all the cannon, colours, and elephants were captured ; and the Maharaj himself, severely wounded, with difficulty escaped during the night into his capital.

The success, however, was not followed up into the Kolhapoor country, although the feudatories, and more particularly the Chief of Toregul, were severely harassed and plundered.† The Peshwa interfered to arbitrate, and it was finally agreed that one of the Kolhapoor Princesses should be given in marriage to the Chief of Nepanee, to prevent the occurrence of all future feud.

The marriage was celebrated at Kolhapoor on the 21st June 1809, and at the same time royal brides were given to Nagojee Rao Patunkur and Luxoomon Rao Sinday Senakhaskhel of Toregul ; but a considerable gloom was thrown over the festivities by the sudden departure of the Nepanee Chief, who, suspicious of treachery, decamped during the night with his bride.

During the year 1811 the Queen Yesoo Bae died, and the Maharaj espoused a daughter of Abajee Rao Nimbalkur of Wutar ; and the restless Chief of Nepanee, confident in his strength, and disregarding the family tie which now bound him, made a further irruption into the Kolhapoor country, for the avowed purpose of subsisting his numerous followers, and again signally defeated the Kolhapoor troops at Hewra, capturing 5 guns, and 1,200 prisoners.

The Kolhapoor Government attributed these attacks entirely to the perfidy and treachery of the Poona Government, who publicly disclaimed all countenance of the Nepaneeekur, but who secretly encouraged the Raja to resist all demands made by the Resident, who was engaged in the settlement of the

* Vide page 344 of Grant Duff's History, Vol. III.

† Consequent on the inroad by the Nepanee Chief on the Toregul Jageer, besides many grants of land in perpetuity, a sum of Rs. 10,000 was distributed as blood-money by the Maharaj among the families of those who had lost relations in the conflict.

Southern Muratha Country. To afford time to the Nepaneekur to complete his object, and seize the capital, a remonstrance was also made from Poona that the British Government had no right to enter into a treaty with the Raja of Kolhapoor, who was a subject of the State—an assertion as bold as it was false.

But on the consequent concentration of the British force at Pundhurpoor (1812), peace was made between the contending parties through the intervention of Mr. Elphinstone; and the fort of Mulwan, with its dependencies, being ceded to the Bombay Government, a treaty between the powers was entered into, and the State was at last guaranteed from further foreign aggression.

The latter days of Prince Shivajee were passed in squabbles with his mercenary retainers, and the palace and State records were partially destroyed during a tumult within the court yard, which the Puthans under their leader Sadil Khan had raised, on account of disputed arrears of pay; and at length, whilst engaged in the superintendence of public works, the prince was seized with a malignant fever, which carried him off at Kolhapoor on the 24th April 1812, after holding authority for 53 years.

The long reign of Shivajee had been from the commencement one of almost incessant hostility and continued suspense between the prospects of ruin and of conquest, and to support the fierce struggle for independence, every effort to provide means had been resorted to,—piracy at sea, plunder at the Court, and oppression in the collection of the revenue,—and all frequently without avail.*

Grants of land were unsparingly made, to the impoverishment of the crown estates; two-thirds of the entire country were thus transferred to partizans for military services, and a swarm of reckless characters were left behind, who rejoiced in anarchy, and whose livelihood was to be gathered only among the troubled waters. All the evils, also, of the feudal system prevailed in their full force: continued warfare was allowed between the petty authorities; the ryuts were oppressed, and the entire rent forcibly seized during the hardest season; fines increased, as commutation for all other punishment; justice was one-sided, and only meted out to favoured followers; merchants and wayfarers were despoiled during the journey; the labour of the cultivator was exacted without remuneration, and a multiplicity of monopolies existed, to the destruction of all trade.

Shivajee left two sons by different mothers, Shumbhoo and Shahajee, who

* On one occasion, the mutiny of the Toregul retainers, from their lack of subsistence, being brought to the notice of the prince, he ordered a remittance to be immediately made from head quarters; but the treasury was found to be utterly empty, and the ornaments and golden crown, studded with diamonds, were forthwith taken from the Goddess Maha Luxoombe, and transmitted to relieve the distress.

Sumbhajee Rao, the chief, however, managed to pacify his followers, and with great forbearance returned the ornaments to the temple, with the additional present of a valuable cloth for the deity.

are more generally known by the names of Aba Saheb and Bawa Saheb, and on the death of his father the elder son Aba Saheb quietly succeeded to the government.

Of a mild and gentle disposition, this prince was averse to the dangers and excitement of war, and he somewhat endeavoured to curb the turbulence of his feudatories, and to impart a more peaceful tone to the nation.

The courts of justice were once more opened, under his own superintendence, learning was encouraged, the ryots enjoyed a short respite from oppression, the royal banner remained unfurled in the capital, and during this season of repose the finances assumed a more healthy appearance.

Although torture was tolerated until the year 1845 to enforce confession among criminals of low caste, and deleterious food administered to get rid of the obnoxious Bramins, trial by ordeal appears to have been discontinued during the reign of this prince, and the last example on record occurred about the year 1806 at Vishalgur, when a Patel, to prove his right to the patrimony, is recorded to have walked seven times round the altar of the deity Nursinhu, holding unscathed in his hand a red hot cannon ball.

Aba Saheb was greatly assisted in the prosecution of his peaceful measures by the settlement of the Muratha affairs, which was carried through in the year 1818 by the English Government, and stringent measures were adopted towards Kolhapoor as well as elsewhere to put down the long-prevailing system of piracy,* plunder, and bloody feud.

The Maharaj, who had heartily espoused the British cause during the late war with the Peshwa, at once yielded, and consented to a new treaty, and the districts of Chikoree and Munlee, yielding Rs. 3,00,000, were resumed from the Nepanee Chief, and again restored to Kolhapoor, which was further guaranteed in its original possessions.

The prince persevered in his endeavours to foster the tranquillity of the State, but his measures proved unpalatable to the higher classes; the reformation had been commenced before its natural time, and at his violent death the gleam of sunshine which had been for a short season shed over the principality departed for a time.

On the possession of the district of Kurar in 1821 by the Peshwa Bajee Rao, Suyajee Mohitay, one of the Sirdars of the deposed Pruteenidhee, arrived at Kolhapoor, and being entertained with his followers, the villages of Bhogaon and Kerlee were assigned to him for daily maintenance, and shortly after a Hoozria obtained direct from the Maharaj a Sunud on this village of Kerlee for 5 beegas of land.

* The ancient exploits in their long low Prahows have now entirely faded from the memory of the oldest inhabitant, and no record remains of the murderous piratical onslaught, excepting the savage-looking weapons used in boarding the merchant ship, and which now hang idle on the walls of the palace armoury.

The very character of the great element has been forgotten, and on a late pilgrimage to the coast, the Kolhapoor followers of His Highness, on their arriving at the sea shore, rushed in crowds to quench the thirst of their weary steeds in the salt waters.

The occupation was strenuously resisted by the Mohitay, who entreated the Maharaj either to revoke the order given to the Hoozria, or to grant him his accumulated arrears, amounting to Rs. 20,000, and discharge from the Kolha-poor service.

For a period of four months, his repeated petitions were evaded both by the Maharaj and his ministers, and at length, becoming reckless, he armed himself and six of his relations, and on the 2nd July 1821 proceeded to the palace, resolved to bring the matter to a crisis.

The party was permitted to enter a small room where the Maharaj was seated, and on his rising Suyajee placed himself at the door, preventing all egress, and seizing the skirts of the prince's dress, demanded an answer to the matter in question.

Greatly irritated by this presumption and disrespect, the Maharaj ordered the bystanders to turn the bold supplicant out of the palace; and whilst endeavouring to leave the room, a relation of the Mohitay from behind discharged a pistol, which took fatal effect in the Maharaj's side. He fell to the ground, and Suyajee, placing himself alongside with his drawn dagger, attempted to staunch the streaming blood with his Doopéta.

A general panic appears to have siezed the household, or some kindly feeling towards the Mohitays restrained any hostile demonstration, for this scene occurred during the afternoon, and no opposition was offered. Four of the confidential retainers, Aba Bhoslay, Bhoojung Rao, the Jemedar Cheyn Sing, and Bapoo Khasburdar, were afterwards stabbed and murdered, and still the murderers were allowed to hold possession of the palace till sunset.

Bawa Saheb, on hearing of the outrage, escaped through a window to the house of the head Gooroo, and at length Hybut Rao Gaikwar succeeded in holding a conference with the conspirators.

The security of Surjé Rao Ghatgay, the Gooroo, and the Surlushkur being given, that their lives should be spared, the Mohitays surrendered themselves, and were secured in the stables, and the Maharaj was carried to his apartment, where his wound was dressed, and where he shortly afterwards expired, whilst in the act of unwinding his girdle.

On this catastrophe, the three securities, considering the lives of their trust to be beyond the power of their protection, secretly providing the Mohitays with their best horses, and causing the gates of the town to be opened, sent the party away during the night.

The news of their flight, however, reached the ears of the queen and Jeejajee Rao Khanveelkur, and the Jutun Moolk were ordered in immediate pursuit. Overtaken at the village of Yelgood, Suyajee Mohitay was shot with a matchlock, and his followers were all cut to pieces, and their heads carried by royal command to the palace. The families of the Mohitays were also brought from the village of Kerlee, and were either trampled to death by elephants, or imprisoned in the fort of Punala; and as all the party died without time for confession, it could never be ascertained whether any other had been engaged in the plot.

On the death of Aba Saheb, a strong party, consisting of the Gaikwar family, the head Gooroo, with the influential officers of the State, endeavoured to secure the regency for the queen mother, during the minority of Baba Saheb, the young son of the murdered prince. The adherents of Bawa Saheb were placed under restraint, and letters were despatched to the Governor for his sanction to the arrangement, but the child dying in the mean time, the intrigue was abandoned; and during 1822 Kolhapoor was visited by the Governor, when the title of Bawa Saheb was fully recognized in open Durbar.

In person short, dark, thin, and insignificant-looking, with coarse manners, and features indicating ferocity, Bawa Saheb possessed all the turbulence of the Muratha character without its magnanimity, and his name was never breathed in the surrounding country without dread.

On his accession to power, incensed at the support given by the chief nobility to the queen in preference to himself, the prince chose his officers and associates from amongst people of low rank and indifferent character: old servants were mulcted of their property, and dismissed; grants and Surinjams were resumed at pleasure; and the prince even carried his animosity so far as to attempt the life of his minister Nana, the son of the celebrated Rutnakur Punt, and also that of his Agent at the British Court, the Gooroo Bhawoo Maharaj.

In a very short space of time the prince married eight wives, besides keeping on his establishment a large Harem of concubines, and this host of vicious females produced a most baneful influence; villages, houses, and allowances being granted for their support, and their friends, companions, and kinsmen being advanced to dignity. The palace exhibited a daily scene of profligacy, and the Court of Kolhapoor became a bye-word among the neighbouring States for bribery, intrigue, and ill-faith.

A bold and impetuous rider, he passed much of his time in hunting, and although restrained from openly displaying the full bent of his disposition in extensive warfare, a band of desperadoes was collected under the command of the notorious Soobhana Nikum, one of his unprincipled Hoozrias, and villages were plundered, and highway robberies committed, with the prince of Kolhapoor personally at the head of the gang.

During the disturbances at Kitoor, in 1824, the conduct of the Kolhapoor ruler was considered to be very suspicious, as he suddenly left his capital at the head of 5,000 horse, 1,000 infantry, with 7 guns; and in 1825 his intrigues and outrages had proceeded so far, that the interference of the paramount authority became absolutely necessary. Towns had been sacked, and many of the inhabitants put to death. Kagul had been taken and spoiled, and the legitimate authorities forcibly ejected from the Jageer.

A force of 6,000 men was accordingly marched to Kolhapoor, where it arrived in December, during the period of the siege of Bhurtpoor.

The Maharaj had openly assumed a hostile attitude, and collected a force of 20,000 men, and the plains about the town were white with tents; but as

the advanced guard of the British troops crowned the heights above the city, his heart failed him ; he fired a salute in honour of the visit, and acceded to the proposed terms,—restitution of the plundered property, reimbursement for the expense of the force, and the non-molestation in future of certain of his Jageerdars.

On the departure of the British detachment, Bawa Saheb employed his gathered force in punishing the Gorkurees of Samangur for repeated acts of mutiny, and in bringing away the ordnance which formerly belonged to the fort of Malwan ; and these guns, to the number of 200, which had been secreted since the cession among the jungles below the Phoonda Ghaut, were carried up the rough face of the Western Ghauts, and transported to the arsenal of Kolhapoor.

During the year 1826, the Raja moved with a large force to the frontier of the Satara territory, without any communication with the British Government, and, as was supposed by His Highness of Satara, with hostile intent, which led to preparations to act on the offensive.

In the beginning of the next year, Mahdow Rao Pruteenidhee shut the gates of Vishalgur, and fired upon the royal troops ; and Bawa Saheb was obliged to retreat to Mulkapoor, where he wreaked his vengeance by burning the palace of the Pruteenidhee, and returned to Kolhapoor.

A large fine atoned for this overt act of rebellion : Madhow Rao was restored to all his honours, and the resources of the Maharaj were further increased by the transfer of several honorary titles among his Sirdars ; Narayen Rao Patunkur was deprived of the Surlushkuree for his treachery during the former Nepanee war, and on the payment of a large Nuzurana, Hunmunt Rao Nimbalkur obtained the office ; and the titles of Himmut Bahadoor and Omdut ool Oomrao were granted for a consideration to Rutajee and Pritee Rao Chowan.

Restless under the deprivation of territory from his jurisdiction, which had been ceded as security for the payment of his assessment, the Maharaj now resolved on a personal appeal to the Governor of Bombay, and accordingly made his entrance into Poona in the month of October.

He came with a well appointed body-guard of 1,000 horse, many of whom were attired in chain armour, 16 elephants, a crowd of Hurkara camels, a band of Arabs, and about 1,600 irregular infantry.

An audience being granted, the intentions of Government were fully explained, and it was shortly afterwards intimated to His Highness that he might conveniently return to Kolhapoor. Such, however, was far from his intention ; and he long remained at Poona, preferring request after request, and hoping to tire the Government by his pertinacity. His whole conduct was marked by gross and repeated irregularities, till, having wounded a trooper in the Poona horse, he made a precipitate retreat.

He returned to Kolhapoor, committing many aggressions on his journey ; his turbulence remained intact ; and troops were put in motion from Belgaum

to compel him to obedience, when he again agreed to desist from his evil proceedings.

His promises, however, were soon forgotten, and his excesses were shortly renewed under circumstances of increased atrocity: his horsemen ravaged the country, plundering the villages of the Senakhaskhel and Luxoomon Rao Sindia, and torturing their inhabitants. Instead of reducing, he increased the number of his troops, and at length again violently seized the guaranteed Jageers of Kagul and Inchulkurunjee.

For the third time, in 1827 a British force was collected at Kolhapoor, when that fortified town, although occupied by 3,000 Arabs, immediately surrendered: a revised treaty was tendered for the Raja's adoption on the 23rd October, and a brigade was left to enforce its provisions.

By this treaty His Highness was obliged to disband his extra soldiers, and reduce his effective military force to 400 horse and 800 infantry, to discharge his Arab guard, to cede the Chikoree and Munolee districts in payment of the expenses incurred in the expedition, to surrender the mountain fortresses of Punala and Puwungur, and to permit a British regiment to be quartered at Kolhapoor.

He was further mulcted of Rs. 1,47,948 for damage done to his neighbours, and an agreement entered into that a minister should be nominated by the British Government at their pleasure.

These arrangements were attended with the most beneficial results, and the adjoining country enjoyed a period of quiet which it had not done since the accession of Bawa Saheb to power.

For the last ten years of his reign the internal state of Kolhapoor affairs was that of a bankrupt endeavouring to preserve the appearance of more palmy days—stripped of some of its richest territory, and loaded with debt, yet still preserving all the ancient offices and grandeur, with an immense standing army of 10,000 men: abuse was passed over when pay was not forthcoming, and each individual followed the example of his liege lord, by getting what he could, and expending it with an utter disregard to futurity.

The estates and villages of the Sudais fell into the hands of money-lenders, the Surinjam followers were miserably equipped, and the army became a discontented rabble.

Notwithstanding the strenuous endeavours, and the frequent visits and councils of the Political Agent, the Maharaj surrounded himself with depraved associates, low debauchery was gradually debasing the character of the Court, and the immorality of the capital exceeded that of other towns.

Having scarcely any means of subsistence, the Sudais daily sat down to the palace dinner, and losing their influence in the country, sank into mere minions of the prince. Every chief, every official of any rank resided in the city, which thus swelled out to a most unnatural size, and became a perfect hot-bed of faction and intrigue. Delegated authority even from the district Mamlutdars was employed throughout the country; no accounts were kept in any department;

and each person paid for his place, and in terror of displacement gathered as much as he could whilst in the enjoyment of office, for the nominal salary was but a premium to speculation.*

The natural result of this confusion was to render the prince entirely despotic. The intermediate links in the chain of society were wanting : every office was sold at pleasure by the ruler, and the inferior nobles might be constantly seen digging materials, or using the trowel and the crow-bar at his command. The courtier, however, who during one week was in chains, and stripped of his property, found himself during the next in better circumstances than before, and there existed other inducements to endure this capricious despotism.

* As an example of the many daring characters which sprang to life like mushrooms produced by those unsettled times, I subjoin a brief sketch of the life of Soobhana Nikum. .

One of the hereditary Hoozias or personal attendants of the Raja, his family enjoyed a small Inam of 5 beegas of land ; but finding favour in the prince's sight, he received office in the private palace gang, by whom highway robberies were committed, and villages plundered, with the prince in person at their head.

Enlarging his sphere of action, and deserting his master, he set up on his own account, and, collecting a band of 1,000 Mangs and Ramoosees, for a long time infested the district of Panala, committing the most atrocious acts of torture in the acquisition of plunder.

He was at length entertained, along with his gang of desperadoes, in the Raja's service, when the Kolhapoor force was assembled in 1827 in hostile attitude to the Bombay Government.

Placed in arrest shortly afterwards for committing a burglary in the town of Kolhapoor, he was confined in one of the royal stables, from whence he made his escape on one of the Raja's favourite chargers, and, on reaching the Nizam's country, he assumed the character and state insignia of the Raja's brother, and, collecting a large body of men, commenced indiscriminate plunder.

Driven from the Nizam's country, he appeared at the head of 2,000 Ramoosees in the Satara State, where he levied tribute and contribution in his own name : his gathering, however, was dispersed by the Satara troops, and he only escaped by cutting off his clothes during the pursuit with his dagger, and hiding in a jungle.

Taking refuge in the house of his father-in-law, a party was sent from Kolhapoor to apprehend him, but he again escaped in the disguise of a well-dressed female.

He was at length seized in 1833, but was allowed to purchase his freedom by a payment to the Kolhapoor State of Rs. 2,000, and he was left in charge of the capital when the Raja proceeded on his last trip to Tooljapoor.

Engaging in an intrigue against Satara, he was again confined, first in Kolhapoor, where he seduced the wife of a respectable Bramin, who introduced herself in male attire into his prison, and afterwards in the fort of Bhoodurgur, whose garrison he instigated to rebel, and proclaim Cheema Saheb Raja, and himself Karbharee. The plot was, however, discovered on the eve of breaking out, and Soobhana was brought back to Kolhapoor, where he was kept in durance until 1843, when he was released on bail by the Dewan Saheb. For the following year, Soobhana instituted himself administrator of justice in the districts, but on a very flagrant oppression, he was seized. Again making his escape, he collected a gang, and having vainly attempted to seize the village of Akewat, he joined the rebel Gunkurees at Samangur. Taken prisoner on the fall of the fort, he was confined in the Belgaum Jail, from whence he succeeded in effecting his escape, and remained at large with different rebel forces until the end of the disturbances in 1845, when he was finally captured, tried, and executed.

The numerous royal stables furnished animals for the use of all the respectable subjects, and entirely at the cost of the ruler ; escorts were always freely granted ; dinner was daily served in the palace for 800 people ; bribery, forgery, and fawning were the means of political advancement ; and although the arena was somewhat stormy, yet it offered a fair field for the peculiar abilities of the Muratha aspirant.

The ryuts, however, were protected in some degree, and the royal coffers were frequently enriched by the illicit gains of the revenue officers, who committed any glaring oppression. The petitioner also was sometimes heard, and his case settled by the Raja himself, from whose decision there was no appeal. Market prices were arbitrarily regulated, and crime repressed by severe imprisonments and torture ; which, however, were always commutable into a money payment to the treasury.

No incident worthy of note occurred during this period of despotic misrule, and although, for a short time, affairs under the administration of a son of the great Rajadnya assumed a more favourable aspect, and the British troops were withdrawn, on the express agreement that if at any future period it was found necessary to send a military force to the capital it would not again be removed, yet immediately afterwards violence and extortion again regained their ascendancy.

The prince plunged into disputes with his own minister, and with the Political Agent, whose life was endangered in open Durbar, by the discharge of fire-arms from one of the turbulent followers of Kolhapoor. Honorary titles were transferred at pleasure on payment of a fine ; the great feudatories, on the pretext of ancient infidelity to the State, were continually molested ; and the Maharaj finished his career, as he had commenced it, in the full enjoyment of all the vices inherent in his character, developed and matured by unresisted power, and unrestrained indulgence.

His last act evinced the untameable recklessness of his character. He affected to proceed on a pilgrimage to Tooljapoor, but the whole was a mere scheme to plunder some of the rich towns of the Krishna. For this purpose he had embodied, at a great sacrifice of his remaining crown lands and family jewels,* a levy of 20,000 men ; and heavy guns, and other munitions of war, were concealed among leaves on the carts which accompanied his train. He was, however, seized with cholera before he could execute his project, and died at the village of Yeotee, near Pundhurpoor, on the 29th November 1837, and his disappointed retainers returned to Kolhapoor.

Bawa Sahib left two legitimate sons and two daughters, and on his death his eldest son, Shivajee, was placed on the Gadee, and a regency was formed, consisting of his mother, his aunt, and four Karbharees.

* A robbery of the Toshakhana by his own gang, under the guidance of Soobhana Nikum, according to general belief, enabled the prince to obtain secret possession of house jewels, and afforded him the opportunity of privately pawning them, without the public stigma attaching itself to such an act.

The ladies quarrelled, the party of the aunt proved the strongest, as they were the most wealthy and unscrupulous, and the entire exclusion of the Raja's mother in six months allowed the aunt, or, as she was denominated according to the Muiatha custom, the Dewan Sahib, to assume the whole powers of government.

This lady adopted the late prince as her model of government, and her course, which was ably supported by her ministers Dinkur Rao and Raojee Waknees, though short, was one of great iniquity: corruption and oppression continued, the finances fell into deplorable disorder, and although the Karbharees were dismissed, and an attempt made, through a Native agent, as Akbur-navees, to exercise some wholesome control, the measure was met with such determined hostility that a general rising in the country was expected.

Hitherto this principality had been a scene of constant cruelty and disturbance; the advice of the Political Agent was on all occasions evaded or unheeded; and, excluded from the field of plunder and warfare, the energies of the rulers had been turned to harry their own subjects.

It was therefore determined, that according to the terms of the treaty, a minister should be appointed by the British Government, and Dajee Krishna Pundit was transferred, during the year 1843, from one of the most influential offices under the Bombay Presidency to fill the situation.

Within a month of his arrival, his two Kolhapoor coadjutors were dismissed for peculation, and Dajee was left alone to stem the torrent of abuse among a proud, crafty, and faithless nation.

Had the minister been as dishonest as his predecessors, and joined hand in hand with the oppressors, his reign would have been more tranquil and profitable to himself: but his integrity was inflexible; the illicit gains and corruptions of chiefs and underlings were alike exposed and checked, and under the orders of superior authority to save the very existence of the State, sundry measures of reform were introduced, and among others the startling establishment of 21 Mamlutdars was reduced to the more reasonable number of six.

The Gurkurees, who were supported by certain lands, depending upon the forts, had always resented any supposed infringement of their rights by shutting their gates, and since the days of Shivajee these acts of rebellion had been always most leniently treated.

With their accustomed sensitiveness they became alarmed at the transfer of the management of their petty plots of ground. Hitherto they had possessed a Mamlutdar who had little extra country to superintend, and who used the seal of the fort as his seal of office; and when the Mamlutdar on extended powers was appointed, he was refused admittance into the fort.

How deeply the Dewan Sahib and her faction of Mankurees were in the first instance implicated in this treason has not been satisfactorily proved, although it is well known that all the higher classes who paid allegiance to that lady were discontented; that midnight meetings were held among the malcontent nobles; that emissaries had been dispatched to various States, and that

reports were currently circulated throughout the country that there was not a British soldier available within 200 miles; but Indian Sirdars in all rebellions are slow to commit themselves openly, and the Kolhapoor outbreak which followed the absorption of the Gurkuree Mainlutdar was no exception to the general rule.

In July, the Gurkurees of Samangur and Bhoodurgur closed their gates, and, entirely mistaking the character of the controlling Government, refused all offers of capitulation, and placing a firm reliance on the hitherto impregnable nature of their strongholds, there remained only on the part of the authorities a recourse to coercion. A detachment was accordingly moved for the purpose from Belgaum, and the force, consisting of 1,200 men, with 4 mortars, and two 9-prs., under the command of Lieutenant Colonel Wallace, of the Madras army, arrived on the 19th September before the place.

The strength of the fort lay in its position on the summit of a scarped rock, and in the stone walls, which were found to be from 20 to 60 feet high, and between one and two miles in circuit.

On the 24th the Peta was carried by storm, and no effort was wanting to reduce the fort, but the means at disposal were insufficient. The siege was carried into a blockade, and the commandant applied for a reinforcement with battering guns from Belgaum.

In the meantime, on the 22nd September, the garrison of Bhoodurgur had sallied out upon the Kolhapoor force, which had been sent against the fort, under the Surlushkur, and had driven them off with loss, and these two apparent checks to legitimate authority imbued the rebels with great confidence, to the increase of their ranks, and to the wide spreading of disaffection.

Reinforcements were now ordered from various quarters towards the disturbed district. On the 8th October General Delamotte assumed command of the troops in the field, and on the 11th four battering guns reached Samangur. They were immediately placed in position, and by the evening of the next day a practicable breach was effected.

When the guns arrived, Mr. Reeves, the Commissioner, allowed the garrison the opportunity of a parley, to state their grievances, but he found that the Gurkurees only desired to gain time, in expectation of support from Kolhapoor, where in the interim the Sebundeas had risen in open revolt, and had seized and confined the minister Dajee Pundit, and where the rebel leaders Sukharām Ghatgay, the uncle of the younger prince, and Babajee Aheerékur, one of their Jemadars, had assumed command, with the two Sirdars, Dinkur Rao Gaikwar and Raojee Waknces, as their ministers of state.

Affairs were therefore allowed to take their course, and shortly after daylight on the morning of the 13th the place was stormed and carried with little opposition, and a large body of insurgents who had collected in the neighbourhood were cut up by a wing of the 5th Madras cavalry.

Colonel Outram joined the camp on the day before the storm, to act with Mr. Reeves, and the Joint Commissioners now offered with certain exceptions

an amnesty to all who would immediately return to their allegiance. The proclamation, however, proved of no effect.

On the day after the capture of Samangur, Colonel Outram, with Colonel Wallace, and 500 of his brigade, proceeded to Kagul, one march from Kolhapoor, with a view of procuring the release of the minister, who was now imprisoned in the fort of Puwungur, as well as of supporting the Raja and any well affected chiefs against the disorderly troops and their disloyal leaders.

The movements of the head quarters under General Delamotte were more dilatory. He did not leave Samangur until the 20th October, hesitating whether to move on Kolhapoor or Bhoodurgur, the garrison of which had ten days previously plundered the British Purguuna of Chikoree, and robbed the treasury of the head station.

On the 24th of October, after much negotiation through the Khan Saheb of Kagul, and not until Colonel Wallace's detachment had been strengthened, Dajee Pundit was released, and the young Raja of Kolhapoor, with his aunt and mother, and a majority of the chiefs, left the city, and joined the British camp.

This movement had been strongly opposed by the Kolhapoor soldiers, about 500 of whom, under Babajee Aheerékur, finding their wishes defeated, absconded, and joined the Bhoodurgur malcontents.

Babajee and other principals had been excepted in the offer of amnesty, but when General Delamotte at length appeared before Bhoodurgur with every means of speedily capturing the place, he admitted the garrison to a surrender, and allowed himself to be detained for several hours at one gate, whilst Babajee with his followers escaped from another.

Thus was the flame spread, rather than extinguished, for Babajee immediately moved to the still stronger fortress of Punala, where the nation imagined that a permanent stand could be made against all comers.

On the 25th November General Delamotte appeared before Punala, where Colonel Ovans, the Resident of Satara, was now imprisoned. This officer, who had been lately appointed Special Commissioner in the Southern Muratha Country, had been way-laid on the 17th November, while incautiously travelling dawk with a very slight escort from Satara to Kolhapoor, and carried prisoner to Punala.

Strenuous endeavours were made by the Joint Commissioners to effect his release, and Colonel Ovans was at length forwarded to the camp; but secure in their supposed strength, the gates were still kept closed by the garrison, who refused the terms offered by the Commissioners.

On the 27th, therefore, the Peta was captured. On the morning of the 1st December the batteries opened: the same afternoon, the breach being reported practicable, was stormed and carried in gallant style, and a portion of the garrison, endeavouring to escape to the adjoining fort of Puwungur, were so closely followed by the British troops, that this second fortress also fell on the same day, Babajee Aheerékur and about 70 other ringleaders being killed

in the storm of Punala, and many prisoners captured by parties of troops judiciously placed in the surrounding plain.

On the 5th December Colonel Wallace with a light force proceeded against Rangna, 70 miles distant. He reached it on the 9th.

On the same day he carried the Peta, and in the following night two guns and two mortars being placed in position, their fire during the next day caused the enemy after dark to evacuate the fort, and fly into the Waree jungles.

The fort of Vishalgur had surrendered in the mean time to a detachment sent against it; and the principal fortresses of Kolhapoor having thus fallen, the Gurkurees and soldiery having been dispersed or disposed of, military operations were concluded as far as the territory of Kolhapoor was concerned.

Many of the fugitives, however, joined the insurgents in the Waree jungles, where a most harassing warfare ensued, until the capture of the forts of Munohur and Munsuntosh entirely ended the campaign, and the remnant of the Kolhapoor rebels, who had fled to Goa, were placed in durance by the Portuguese authorities.

In January 1845 a British Officer was appointed Political Superintendent of the Kolhapoor State, a brigade was stationed in the vicinity of the town, and a series of measures of reform and improvement were adopted by the Bombay Government, which in their progress must ensure the protection and well-being of the prince, and the internal peace and good administration of the country.

APPENDIX No. 1 TO ANNALS.

SELECTIONS FROM THE OLD RECORDS RELATING TO THE ANNALS
OF KOLHAPUR.

From Rugoonath Rao Bajee Rao to Bacc Saheb, dated A. D. 1762.

All the people are very glad to find that on the 10th (Dusseira) you adopted and placed on the throne the son of Shahajee Bhoslay Khanwutkur, a member of your family, as suggested by me in a former dispatch.

The honorary dress and ornaments for His Highness (the adopted king) have been sent with Baboo Rao Bawajee, and your Highness will be graciously pleased to receive them, and favour me with an answer.

To Jeeja Aee Saheb, from Abajee Rao, dated A. D. 1767.

I declare on oath that I place nothing above your Highness. I will not listen to any one's suggestions, nor will I join any man in deceit. I will perform my duties in the same faithful manner as my ancestors have done. If your Highness command me to present myself with my force, I will do so, and will not return without your Highness' permission. If your Highness require my force only, I will dispatch it. I make this declaration in the presence of my mother, Oopadhya Bowa (royal priest), Jotyajee Rao Yadaw, and Yeshwunt Rao Sinday Soobedar, and bind myself to act accordingly by everything sacred. I, the descendant by adoption of Purushram Punt, give Hunmunt Rao Mankeshwur as security for my observance of the said oaths.

To Aee Saheb, from Hunmunt Rao Mankeshwur, dated A. D. 1767.

In obedience to your Highness' orders, I declare on oath, that Bhugwunt Rao Trimbuk Pruteenidhee, Abajee Rao Krishna, and myself, will serve your Highness with fidelity, and will not join any impostor, or pretender to the throne, nor listen to any insidious suggestions. We will dissuade the Peshwa from his evil intentions, and certainly advise him to acknowledge no other master than your Highness. Should the Peshwa, however, engage in treasonable proceedings, we will not join him, but attempt to carry out your Highness' intentions. I will not conceal the least matter from your Highness. The moment your Highness orders us, we will serve your Highness with 5,000 men and more, and will not depart without your Highness' permission. I will fulfil these promises by my Koolswamee (tutelary god).

We shall manage the districts of Munolee and Chikoree, and other villages, (all of which have been presented to your Highness by the Peshwa,) in such a manner that no loss, either in land or cash, may be occasioned to your Highness. We shall so manage the affairs that no difference or dispute will arise between your Highness and the Peshwa respecting any district. To effect this is our duty. We will conquer the province of Koodul, and present it to your Highness, without expecting anything in return. Agreeably to your Highness' wishes, we shall perform important services.

I declare myself to be security for the due performance by Abajee Rao Krishna of the promises made by him on oath at Punala on the 2nd Wudya Jestu (June), in the presence of his mother Oopadhya, Yeshwunt Rao Sinday Soobedar, Jotyajee Yadow, and Bhugwunt Rao Mulhai.

From Doorga Aee Saheb to Abajee Mahadeo, dated A. D. 1773.

We have addressed a letter to Rugoonath Rao Peshwa. You are directed to send to us the women and horses, together with the other articles that have been carried off, after great excesses, from the Thana of Sherole. The women alluded to are with the Thorat. The papers and agreement relating to the present made to us by the Peshwa of Talooka Chikoree and Munolee, and other villages, have been received by us. You know whether or not the Peshwa has redeemed his promise. You should therefore persuade him to make over the abovementioned places to our possession, in accordance with the agreement he has entered into. You should also send to us the writings you have taken from the Thanadar of Sherole.

From Chutruputee to Rugoonath Rao Peshwa, dated A. D. 1773.

Our subjects have suffered great hardships from your army since your encampment on the Krishna. You should therefore order your forces to abstain from annoying them. We hear that our ambassador Nago Shiamjee, deputed to you, has, in consequence of the misrepresentation of certain parties, received bad treatment at your Court. Ambassadors have never been treated in this manner in any other place, and the conduct of your ancestors was very different indeed from yours. You should not behave towards us in such a disrespectful manner, seeing that you have already taken an oath, and entered into an agreement with Mahadeo Shastree. We have ordered Yeshwunt Rao Sinday to make certain communications to you through Chinto Witul and Abajee Mahadeo.

From Chutruputee to Hyder Ali, dated 19th Shaban A. D. 1773.

We have received the elephant, jewellery, and dress sent by you with Parushram Bullal, Anund Rao Venktesh, Raghoob Witul, and Balajee Witul.

We have also understood the contents of the letter forwarded with them. Certain important secrets conveyed to us by them have much gratified us. We have also been informed of your intention to come up to this place, and to accomplish our wishes. You would have proved highly useful to us, had you joined us after your crossing the Toongbhudra ; but as the monsoon is over, and the season for active operations draws nigh, you should positively leave on the Dusera, and soon march up here. Your presence and assistance are absolutely necessary to get Rugoonath Rao invested with the Peshwaship, and to awe our opponents into silence. There are, besides, many things to be executed. We have directed Yeshwunt Rao Sindia to communicate to you the particulars about them.

To Shivajee Chutruputee, from Hyder Ali, dated the 25th Mohurum. (16th March A. D. 1776.)

I have received your Highness' letter, intimating your having sent Buheerjee Naik Gaikwar and Balajee Witul to this place, and desiring me to remit (to you) money for the expenses of the army, and to proceed to the province. You may have already heard that the force dispatched by us to Bunkapoor met that of Barabhaee under Pandoorung Shakee and others ; and an action took place, in which the commander of the enemy and other Sirdars fell. We have lately sent a large army (where to is not mentioned). I had also made preparations to set out for your place, but owing to the near approach of the Dusera, I have postponed my departure for a few days. Buheerjee Naik and Balajee Witul have reached Bunkapoor. You will be good enough to send two or three hundred trustworthy sepoy to Bunkapoor, and the required money shall be remitted to you with them. After collecting a large army, you will, I hope, harass Barabhaee's forces, and exact tributes in his territory. We are preparing to join you with a large army, accompanied by many field-pieces.

From Hyder Ali to Doorga Aee Saheb, received on the 22nd ———. (A. D. 1776.)

As desired in the letter from Yeshwunt Rao Sindia and Balajee Buhirow, we have remitted, with the Sowars sent here for the purpose, Rs. 1,00,000 in 28,570 Hoans, each being equivalent to Rs. 3-8-0. This amount will meet the expenses of the army you have collected. On the receipt thereof, you will address us a short letter. You should achieve an exploit commensurate with the army you have mustered. We cannot make out why you did not attack and defeat Ramchundru Gunesh, when he was so near you. If you think you can now attack him with advantage, you should not lose a single moment in doing so ; if you do not think so, you should dispatch Yeshwunt Rao with your army to Dharwar, when our united forces can easily defeat the army. On the 25th of Mohurum, we marched from Puthan to Peshkhan, on our way to

Dharwar. On our meeting Yeshwunt Rao (there), we and he shall jointly endeavour to check and annoy the enemy. We must not procrastinate now. We have addressed a letter to Yeshwunt Rao on the subject. The ambassador Anund Rao will communicate all other particulars to you.

From Hyder Ali to Yeshwunt Rao Sindia, dated 10th Rubeeool Uwul. (29th April A. D. 1776.)

We have received your letter, and understood its contents. The ambassador Anund Rao has also conveyed certain news to us. You state that you have collected a large army, and ask money for its expenses. We have accordingly remitted to you Rs. 1,00,000 from Bunkapoor with the Sowars sent here for the purpose. You must have received the sum by this time. We left Puthan with a large force and artillery, and have travelled 40 miles. We are coming to you by rapid marches.

My force marched from their encampment at Hooblee, against Purushram Shakee, who had stationed himself at Oogargola, when my Arabs made a furious onset, and dispersed his army. His camp was also plundered, and three or four hundred horses, twenty or thirty camels, and 2,500 bullocks, carried off to the camp at Hooblee. Though my force there is not very great, Purushram Shakee cannot withstand it. He has fled (to your frontier).

The large army you have collected must not be allowed to remain idle, and thereby entail on us much unnecessary expense. You should, if you can, dislodge Ramchundru Gunesh, and put him to flight. If you do not succeed in this attempt, you had better harass and drive away Purushram Shakee, who, with the remainder of his dispersed army, had marched to Munolee. On our arrival at your place, the necessary measures will be taken in the matter; but in the mean time you should not remain idle with your large force, but endeavour to effect either of the objects hinted above.

From Doorga Aee Saheb to Hyder Ali, dated the 18th Shaban.

We have learned with pleasure from your, and ambassadors Bajee Rao Govind and Abajee Mahadeo's letters, that the affairs of your Zilla have been settled. The papers relating thereto have been dispatched here.

You state that you are coming by rapid marches to this place with a large force, and many field-pieces, and request us to join you with our army, promising to pay its expenses. On the receipt of your letter we ordered our great Sirdars to send to us their Karkoons to receive their (Sirdars') pay. Since the payment of salaries commenced, a great army has collected here. Mahadajee Sindia has left Poorundhur, and encamped near Ruhimutpoor, with the view of invading our territory. He is expected to proceed onwards after the Dusara. We should have a large force here to enable us to oppose and punish him. We have made preparations to send to you Sutojee Bhoslay,

with an army, after making the necessary provision for the protection of this State. He will soon join you. You are aware that to collect and maintain a large force is very expensive. Had some money been remitted to us, the delay that has occurred in sending the troops would have been avoided. Now that the monsoon is over, men are collecting here in great numbers. At such a time a large sum of rupees is absolutely necessary to enable us to achieve great conquests. Should the enemy advance before we are prepared to receive him, we shall be great losers. You have already proposed that Rugoonath Rao Pundit be made Peshwa ; now you should acquire the fame of having raised him to that dignity. Yeshwunt Rao Sindia is ordered to communicate to you certain news.

From Yeshwunt Rao Sindia to Hyder Ali, dated Mohurum. (February A. D. 1778.)

It is a month since you promised to send a force of 25,000 men, but have not yet done so. Confiding in your promise, we have held out till now, by feigning a disposition to peace. Mahadjee Sindia has been very importunate in his requisition for the settlement of the matter, and his camp is pitched in our immediate neighbourhood. Our Sirdars and sepoys in our fort (of Kolhapoor) have hitherto bravely defended it from the attacks of the enemy. We have held out to this day in anticipation of your promised assistance ; but you have not as yet sent it to us. We have learned with satisfaction the contents of the letters on different subjects you have sent with Bajee Rao. We are now placed in very critical circumstances. You ought to take this into consideration, and assist us. Fourteen days have elapsed since Bajee Rao informed us of your intention to dispatch him and your son Tipoo Meea with 3,000 horse, 10,000 foot, and some field-pieces, to Samangur ; they must have now reached their destination. You should not hesitate to send us speedy assistance.

From Hyder Ali to Chutruputee.

When we made ravages in the territory of the Poona Government, you, as our ally, also did so. As a peace with the Poonékur is now being negotiated, we have directed our army to abstain from further hostilities. We hear that your Sirdars, Sutojee Bhoslay and Manojee Sindia, have been making plundering inroads into the provinces of Jumkhundee, Terdal, and other districts belonging to the Poona Government. I need scarcely observe that these proceedings are anything but lawful, seeing that a peace is already under negotiation. If Manojee be at Kolhapoor, you will be pleased to dispatch him to Raghoo Rao Peshwa. You should also order Sutojee Bhoslay not to plunder the territory of the Peshwa, and send him here with his force in accordance with our agreement. Plenipotentiaries for the conclusion of the peace have arrived here from Poona. It is desirable that when we conclude a treaty with the Peshwa you should also do the same, and therefore depute a man entrusted with

powers to discuss the terms to be entered into with the Peshwa on your part. Should you, however, be not inclined to do so, you will be pleased to inform us accordingly. You will learn other particulars of news from the letters sent by Raghoo Witul and Avdhoot Rao, received on the 21st Mohurum 1190.

To Chutruputee, from Purushram Ramchundru.

Agreeably to your instructions, I have ordered my sepoy to abstain from ravaging the Talookas of Toregul and Kudkole, and other districts in your territory. The Katuks of Bunnoor and Kudkole (belonging to your Government) have been punished for having, in opposition to the advice of your Sirdar, Yeshwunt Rao, behaved disrespectfully towards us. The Thana of Bunnoor was given into the charge of Moorarjee Bhoslay when he was sent here by Luxoomon Rao Siunday, and the affairs of that of Kudkole have been managed under our superintendence.

During the disturbances occasioned by Hyder Ali, Sutojee Bhoslay possessed himself of the Talookas of Munolee and Hookeree. As these Talookas had, in obedience to your orders, been previously farmed out to the Sowkar, I beg you will be pleased to cause them to be restored to him.

To Chutruputee, from Purushram Ramchundru, dated the 6th Jumadee ool Akhir. (21st June A. D. 1779.)

You have deputed ambassadors to this place to negotiate with us the terms of a peace, and of the restoration to you of Munolee and Hookeree. As the districts taken possession of by Sutojee had been already farmed out by your Highness to the Sowkar, we have restored them to him (the Sowkar), in order that he may be enabled to realize the amount he has advanced on account of the farm. Gur Ingluz and other places, which were possessed by the Ghorepuday for a long time, but which were wrested from him by the Samangurkur, have been recovered, and made over to the former. The inhabitants of Akewat having, without your knowledge and consent, made many plundering inroads into Koorundwar, and other places, we have marched against that village. I am very glad to learn that the terms of the ransom of the villages farmed out to the Sowkar are under consideration.

APPENDIX No. 2 TO ANNALS.

From General Wellesley to Shivajee Chutruputee, dated the 19th May 1803.

Copy of the letter addressed by me to the Toregulkur has been forwarded to you. I hope you will issue strict injunctions to that chief to act in accordance with our wishes. If he does not attend to our orders, it will be necessary to direct General Stuart to enforce the chief's obedience, for the terms we have granted him for (the preservation of) the tranquillity of the country are by no means difficult of observance. One gun, a pair of pistols, and a telescope, are herewith forwarded to you. I understand you are desirous to have such articles : you should accept of them. Received on the 9th Sufur.

From General Wellesley to Shivajee Chutruputee, dated the 1st August 1803.

I have received your letter of the 11th July (1803), and have also understood the instructions, which, under your Highness' orders, Lingo Punt has verbally communicated to me. I have dispatched Soobrao Ghatgay Surjé Rao for the purpose of laying all particulars before your Highness. Ramroy has brought me certain information that your Highness' Sirdar Sukharam Ghatgay, who has employed several followers, commits depredations in the country about the Krishna. Your Highness must well remember the peace we have established, and the letters that have passed between us. I hope that the tranquillity which is prevalent in the country may last long. Your Highness should therefore see that our people going to and from Poona are not disturbed by the Ghatgay. You will, I hope, give all attention to this. As desired by you, we have written to Bombay for a saddle, and some gunpowder, and shall send them to you immediately on their receipt. Received on the 5th Jumadee ool Akhir.

From General Wellesley to Shivajee Chutruputee, dated the 15th October 1803.

The forces of the Tuloorkur Polygar have made inroads into the territory, and assaulted the town of Moorgor, and the fort of Munolee. Azum Shidojee Rao Naik, Nimbalkur of Nepanee, has informed me of your having assisted the Polygar on this occasion. Indeed, without your aid he never would have ventured on the aggressions. The Nimbalkur is a servant of the Peshwa, and is with our forces as his ambassador, which circumstance is also known to your Highness. I have often requested your Highness not to disturb the territories of the Sirdars serving with the English forces, but to write to

me on the subject of complaint against any of them, when justice shall be done to all parties. This your Highness will recollect. I now repeat my warning, that no one must commit ravages in the territories of any of the Sirdars, while serving with the British forces, and that whoever dares do so shall be punished as an aggressor upon the Company's territory. As your Highness has been our ancient friend, and as there is no difference between us, I have brought the above to your Highness' notice, and feel confident that your Highness will soon put a stop to such evil practices. As it was necessary to do so, I have written to Mr. Campbell, to protect the territory of the Nepanee-kur. I hear that the Tuloorkur Polygar has committed inroads into the principality of Kitoor also, and I request, therefore, that Kitoor also be exempted from similar depredations. Received on the 8th Rujub.

From General Wellesley, dated the 27th October 1803.

A division of our army has captured the fort of Asseergur, and the Bengal forces the cities of Delhi, Aligur, and other places. The latter also engaged and defeated the armies of Sindia in Hindustan, capturing all the ammunition, and 68 pieces of artillery. M. Perron, the commander on the side of Sindia, has surrendered himself, with all the Frenchmen under him. This officer fought bravely against the English for Sindia. But what he has suffered is sufficient, and he has met with his deserts. This information will gratify your Highness, who is our friend and ally.

From General Wellesley to Shivajee Chutruputee, dated the 16th January 1804.

A few days ago I addressed a letter to your Highness, intimating that a portion of the Company's forces marched on the 29th November 1803 against the armies of Maharaj Raghojee Bhoslay Sena Saheb Soobha, and of Alija Dowlut Rao Sindia Bahadoor, and gave them a complete defeat, capturing all their cannon. On the 15th December following, the fort of Goyulgur was stormed and taken. Treaties of peace were concluded on the 17th and 30th idem with the Bhoslay and Sindia respectively, the terms of which are honorable to all the parties concerned. I beg to congratulate your Highness on the tranquillity that is thus secured in all parts, both of the Deccan and India. I beg to state for your information, that after deputing ambassadors to both the Sirdars, we shall proceed towards the Deccan with our forces. Received on the 9th Shuwal.

From General Wellesley to Shivajee Chutruputee, dated the 13th March 1804.

When we came to the Deccan, after the conclusion of treaties with Raja Sena Saheb Soobha, and Maharaj Dowlut Rao Alija Bahadoor, several rebellious people remained at large, committing ravages in the country. We put

down and dispersed these marauders, which circumstance has doubtless come to your knowledge. Among the rebels we noticed Wishwas Rao Ghatgay, Mala Dada, and others. Dowlut Rao Sindia wrote to inform them that he had concluded a treaty with the Company, and directed that they should not commit any further depredation in the territory, but join his army, which had encamped at Burhanpoor. But in opposition to Sindia's orders, and to our remonstrances, they did not join him, though sufficient time was allowed for so doing. We therefore fell upon them, and dispersed them in every direction. At the time we attacked the rebels, the Bukshee, as well as the army of Surjé Rao Ghatgay, the brother of Wishwas Rao, was with them. We conclude that Surjé Rao was at the Court of the Peshwa, and that his Bukshee and army, joining Wishwas Rao, fought against us. Wishwas Rao afterwards fled to Kolhapoor, and his brother Surjédar also went to that place, *viâ* Wace. I am aware of the relationship existing between your Highness and these men. Neither the Company nor I wish your Highness to refuse protection to persons of good conduct. I do not therefore ask your Highness to deliver them up to me, though we should not be acting wrong in making that request. But since your Highness has afforded them protection, you are warned that you shall be held responsible for any acts prejudicial to the Company they may commit hereafter. If they assemble forces, and further disturb the peace of the country, satisfaction shall be demanded of your Highness.* I state this for your information, with reference to the friendship that subsists between us. The ravages which have been lately committed in the Deccan and Hindustan have been already unbearable, and it has been agreed that a general peace must be established, and this the Company will not suffer any one to disturb with impunity. Received on the 11th Zilhuj.

EXTRACTS FROM BRIEF NOTES
RELATIVE TO
KOLHAPPOOR AND ITS DEPENDENT JAGEERDARS

BY
MAJOR G. MALCOLM,
ACTING POLITICAL SUPERINTENDENT AT KOLHAPPOOR.

Submitted to Government on the 3rd July 1854.

EDITED BY R. HUGHES THOMAS, ASSISTANT SECRETARY, POLITICAL DEPARTMENT.

Extracts from Brief Notes by Major G. MALCOLM, Acting Political Superintendent at Kolhapoor, containing information on the following points connected with that State and its dependent Jageerdars, compiled from the foregoing Statistical Report on Kolhapoor by Major GRAHAM, and from other sources.

- I. Name, title, and age of chief.
- II. Usual place of residence.
- III. Names and ages of legitimate male issue, and of the principal persons of the Court.
- IV. Whether tributary or not; if so, to whom, and annual amount of tribute.
- V. Estimated gross annual revenue.
- VI. Boundaries of territory, and estimated area in square miles.
- VII. Prevailing nature of the soil, usual means of irrigation, and general features of the country.
- VIII. Natural and industrial resources.
- IX. Routes, approaches, and means of communication by land and water.
- X. Climate, and average range of thermometer.
- XI. Average annual fall of rain.
- XII. Estimated population.
- XIII. Religion, language, tribes, and castes.
- XIV. Brief notice of the mode in which civil and criminal justice are administered.
- XV. Nature of punishments awarded for criminal offences.
- XVI. Educational measures.
- XVII. Progress of vaccination.
- XVIII. Prevalent diseases.

KOLHAPOOR.

I. The young Prince of Kolhapoor, named Baba Saheb, and styled Shree-munt Maharaj Chutruputee, is about twenty-three years of age.

Name, Title, and Age of Chief.

Usual place of Residence.

II. He resides at Kolhapoor, in his palace, which is situated in the centre of the town.

III. He has no male issue. The principal persons of his Court are as follows :—

Names and Ages of Legitimate Male Issue, and of the principal persons of the Court.

The Raja's half brother Chima Saheb Maharaj, twenty-three years of age.

The Punt Pruteenidhee Krishna Rao Amroot, or Raja's Deputy, Chief of Vishalgur, one of the ancient eight ministers of state (Ashta Prudhans), thirty years of age.

The Punt Amatya, or Minister of Finance (one of the Ashta Prudhans), Moreshwur Rao, Chief of Bowra, fourteen years of age.

The Senaputee or Commander in Chief (one of the Ashta Prudhans), Ramchundru Rao Ghorepuday Senaputee, Chief of Kapsee, thirty-six years of age.

Soobhan Rao bin Luxoomon Rao Senakhaskhel, Chief of Toregul, twenty-four years of age.

Jysing Rao bin Sukharam Rao, *alias* Hindoo Rao Baba Saheb Ghatgay Surjé Rao Wujarut Mab, Chief of Kagul, sixty-five years of age. This chief resides in Hindustan, where he enjoys a pension.

Rutajee Rao bin Odajee Rao, *alias* Rao Saheb Chowan Himmur Bahadoor, fifty years of age.

Hunmunt Rao bin Sooltan Rao, *alias* Rao Saheb Nimbalkur Surlushkur, fifty years of age.

The Chief of Inchulkurunjee, just deceased without an heir, although a dependent chief with a large revenue, has no fixed station in the Court of Kolhapoor, and would wish to be considered independent of the Durbar.

Besides the above, there are about ninety persons, who hold seats in Court by virtue of their rank as relations of the Raja, and Mankurees of the State. The Raja, however, holds no Court. The titles of the different chiefs belong to days gone by, giving them no places as advisers to the present Raja.

IV. The Kolhapoor State is not tributary. It remained an integral part of the Muratha empire until the treaty of 1729 between

Whether Tributary or not; if so, to whom, and Annual Amount of Tribute.

Sumbhajee and Shao, grandsons of the great Shivajee, when the former was forced to accept Kolhapoor as an independent sovereignty. The State is still represented in his descendant.

V. The estimated gross annual revenue of Kolhapoor amounts to about Rs. 10,00,000, of which Rs. 6,00,000 is Khalsa, and Rs. 4,00,000 the revenue of dependent Jageers.

VI. Although the districts of Toregul and Raybaug lie beyond the natural boundary of the State, and some of the villages of the dependent Jageers of Bowra and Vishalgur, with the village of Malwan, and the lands of Bhurutgur, are situate below the Ghauts, the State may be defined as bounded on the north by the river Warna, separating it from the Satara territory; on the south by the Belgaum Collectorate; on the east by the Belgaum Collectorate and the Krishna, the latter separating it from the Putwurdhun estates of Sanglee and Koorundwar; and on the west by the Western Ghauts, which separate it from the Rutnagceree Collectorate and the Warec State.

The greatest extent of the principality from north to south is 80 miles, and from east to west 68 miles, and the total area, including that of all its dependencies, may be laid down at 3,184 square miles.

VII. For detailed information under this head, the reader is referred to pages 9 and 10 of Major Graham's Report.

Prevailing Nature of the Soil, usual Means of Irrigation, and General Features of the Country. The principality consists of a succession of vale and mountain, running, generally in parallel lines, eastward from the great Sahyadree range, which forms the western boundary of the State.

The eastern and more fertile portion, though greatly destitute of timber, with the exception of mango and babool trees, is covered in the season with fine crops of jowarree, wheat, and tobacco. This tract comprises the mouths of the different valleys into which the country is divided by the rivers Warna, Punchgunga, Doodgunga, and Hurnkasee, together with a part of the great level Deccan plain through which these tributary streams continue their course to join the river Krishna.

The great valleys of Kolhapoor, which are slightly undulating, are separated from each other by bare continuous ridges of broken table-land, running in low spurs, at an elevation of about 950 feet above the level of the plain. These are again intersected by numerous small tributary nullas, leading into the river, which runs in the centre of each valley.

The banks of the rivers are plentifully studded with green babool trees, and the valley itself is dotted with villages, the sites of which, about three miles apart from each other, are easily distinguished by the luxuriance of the vegetation, and the large trees in their immediate vicinity.

From the village as a centre, the cultivation extends around, gradually decreasing in value from the rich sugar and garden land near the walls to the poor crops of Sawa, which are planted on the confines of the neighbouring heights, and to the very verge of the small strip of jungle which generally separates the localities.

The valleys are several miles in breadth, well cultivated, and bounded by eminences, many of fantastic shape, but principally conical, and whose summits have been in many instances converted into strongholds.

The course of the rivers, as they enter the hilly country, becomes more rapid and tortuous; the hills also rise more abrupt, and become covered with wood, increasing in size from the babool to the towering jack-tree.

The country in general is wild and picturesque, and the vegetation most luxuriant.

VIII. Kolhapoor is, strictly speaking, an agricultural country, and all the Indian grains, and most of the fruits and vegetables, are raised in the principality.

Natural and Industrial Resources.

The principal productions of the country are rice, cotton, sugar-cane, wool, butter, ghee, honey, wax, gums, coloured earth, iron, hides, horns, timber, medicinal plants, farm stock, &c.

Each in its kind is good, though other districts, not so generally fertile, may surpass it in any particular produce. Its rice, tobacco, and goor, however, hold a high place among the products in the Deccan, and a large proportion of the two last is exported to the Konkun and towards Poona.

A fine description of basaltic trap, which takes a high polish, and is much prized on account of its beauty, is found in the hill of Joteeba, about nine miles from Kolhapoor: it is well adapted for ornamental building, and has been used in several instances in this state.

The manufactures of Kolhapoor are confined to coarse cotton cloth, woollen tumblers, nundas, goor and sugar, oil, paper, snuff, liquor, perfumes, baskets and mats, carpets, goonpats, cotton thread, pottery, glass and lac ornaments, charcoal, leather, and iron. Various roots, which grow spontaneously among the Ghauts, are used as food by the inhabitants, and its drugs and medicinal substances are held in much esteem by the Natives of the Deccan.

For a detailed statement of the quantity, value, and net profit of the manufactures annually prepared in the Kolhapoor territory, the reader is referred to page 252 of Major Graham's Report.

Routes, Approaches, and Means of Communication by Land and Water.

IX. For information under this head, the reader is referred to pages 275 to 278 of Major Graham's Report.

X. The climate of Kolhapoor is temperate, like that of the other portions of the Deccan.

Climate, and average Range of Thermometer.

Towards the Western Ghauts, which are covered with wood, and more thoroughly saturated during the monsoon, the air is always colder than in the plains, where, during the months of April, May, and June, hot, suffocating easterly winds prevail. The entire district, however, is partially under the influence of a sea-breeze, and heavy fogs frequently hang over villages and rivers during the cold season.

The subjoined is a statement showing the average range of thermometer for the last seven years :—

| Year. | Minimum. | Maximum. |
|--------------|----------|----------|
| In 1847.. .. | 71° | 78° |
| In 1848.. .. | 68 | 81 |
| In 1849.. .. | 67 | 85 |
| In 1850.. .. | 69 | 84 |
| In 1851.. .. | 70 | 86 |
| In 1852.. .. | 66 | 77 |
| In 1853.. .. | 72 | 83 |

Average Annual Fall
of Rain.

XI. The average annual fall of rain for the years 1847 to 1851 is estimated at 30 inches 18 cents.

XII. The entire population of the principality, including its dependent Jageers, was, in 1853, 546,156, and that of the city of Estimated Popula- Kolhapoor, with Khalsa possessions, amounts to 356,219 souls. Of these 10,000 are Hindoos, and 24,046 Mahomedans; 276,456 belong to the agricultural class, and the remaining 269,700 may be divided under the heads enumerated at pages 140 and 141 of Major Graham's Report.

XIII. The prevalent religions are the Hindoo and Mahomedan. There are also about 50,000 Jains, who, although Hindoos, consider their religion as very distinct.

Religion, Language,
Tribes, and Castes.

Murathee and Canarese are the languages chiefly spoken throughout the principality, the former in the northern and central districts, and the latter in those to the southward, adjoining the Collectorate of Belgaum. Guzerathee and Marwaree are used among the Bunias and merchants, and a knowledge of Sanscrit and Persian is retained among a few of the learned Bramins and Moslems. The predatory classes,—Mangs, Ramoosees, &c.—have a peculiar language of their own. The Beldars also possess a language of their own, and some of the traders possess a peculiar jargon, only understood by the craft, called Nund Basha.

There is no recognized division of tribes, as belonging to particular districts of India.

The Hindoos are all Murathas, and the Mussulmans have been resident for many generations, having come into the country with the first Mahomedan conquerors of India.

The following list will show the different castes, belonging to the different sects of religion :—

Bramin.—Bramin, Suwasee, Shenvee, Goluk, Panaree, and Gowd Bramins.

Shoodra.—Télee, Utaree, Bhat, Beldar, Waşbodeo, Wud, Kokunee, Goozur, Komtee, Marwaree, Lingayet, Rungaree, Hajam, Dowree, Simpec, Sonar, Tambut, Goorow, Jain, Kuruzgur, Kasar, Muratha, Koonbee,

Jingur, Pureet, Khatik, Sootar, Koombhar, Wajuntree, Dhungur, Salee, Kolee, Bhoee, Sungur, Neelaree, Ravol, Boorood, Kostee Gowndee, Pathroot, Byragee Lohar, Choodboodé Lonoree, and Gowlee.

Atishoodra.—Chambar, Bhungee, Mahar, Dher, Holar, Mang, and Kai-karee.

Mahomedans.—Syud, Mogul, Puthan, and Sheik.

XIV. Civil Courts have been established, and business is carried on, and

Brief notice of the Mode in which Civil and Criminal Justice are administered.

decrees are executed in the usual manner, in accordance with the spirit of the Bombay Code of Regulations, by distrainments of property, with the exception of houses, and the implements of husbandry and trade.

Personal restraint, however, has not been introduced for debt, and generally, as the transactions occurred under a very different system of rule, attention in all settlements is paid to the previous custom and usage of the country.

Private arbitration is also encouraged in every possible manner, and cheap justice can be now obtained by the most humble individual in the land.

Criminal justice is also carried on in accordance with the spirit of the Regulations, and the higher court of criminal justice for Kolhapoor is presided over by the Political Superintendent, who is assisted by assessors.

The court takes cognizance of all offences beyond the jurisdiction of the Nayadhish, or deserving a higher punishment than imprisonment with hard labour for three years. Sentences passed by the high court beyond imprisonment with hard labour for seven years are subject to the confirmation of Government.

XV. The nature of punishments awarded for criminal offences in Kolhapoor

Nature of Punishments awarded for Criminal Offences.

are quite similar to those inflicted in the Honorable Company's territory, namely flogging, fine, imprisonment with and without hard labour, transportation beyond seas, and death.

XVI. Besides one English and one Murathee school in the capital,

Educational Measures.

Government institutions have been established at each of the principal towns of the districts. They are periodically visited by an inspector, and the surveillance is entrusted to the master of the English school at Kolhapoor. A tuition fee of 1 anna per month is exacted in these vernacular schools, and in the English school the fee varies from 8 annas to 1 rupee.

A Hindustanee and Persian school has lately been established in the city by Government. There are also private schools, whose masters receive their allowance in fees from the boys.

The salary thus realized is very poor, generally not more than Rs. 4 or Rs. 5 per mensem. The course of instruction consists in a tolerable knowledge of reading and writing Murathee in the Balbodh and Modee characters, and of practical arithmetic.

The total number of boys and girls receiving education throughout the principality in Government and private schools is 2,631, and calculating the children at 10 per cent. of the whole population, this will show that 5 per cent. are receiving instruction.

The annexed tables show the number of Government and private schools established in the Kolhapoor territory, and the various particulars connected with them.

XVII. The progress of vaccination in the Kolhapoor territory has hitherto been remarkably rapid, under the able and zealous management of Dr. Broughton, Civil Surgeon. The following return shows the number of individuals vaccinated from 1849 to 1853 :—

Progress of Vaccination.

| | |
|--------------|------------------|
| In 1849..... | 897 individuals. |
| In 1850..... | 1,290 " |
| In 1851..... | 1,696 " |
| In 1852..... | 1,783 " |
| In 1853..... | 1,277 " |

XVIII. The prevalent diseases in the Kolhapoor country are intermittent fever, dysentery, the varied forms in which parasitical worms appear, and skin diseases. Small-pox and cholera have hitherto swept away so large a proportion of the inhabitants of this State, that other diseases have shown themselves more rare than they may possibly do hereafter, when the above epidemics are rendered less destructive, by the introduction of sanitary measures and vaccination.

ADDENDA.

The Kolhapoor State was an integral part of the Muratha empire, until the Treaty of 1729, between Sumbhajee and Shao, grandsons of the great Shivajee, when the former accepted Kolhapoor as a distinct and independent sovereignty. It is still represented in the descendants of Raja Ram, the younger son of the great Shivajee.

The earliest notice of British connexion with the State is in 1765, when, owing to the prevalence of piracy, the fort of Malwan was taken in possession of.

The first treaty was entered into in 1766. A debt of upwards of Rs. 7,00,000 was acknowledged by the then Queen, Jeeja Baae, and
 First Treaty, of 1766. on payment of the first instalment the fort of Malwan was restored.

The renewed piracies rendered a second treaty necessary in 1792, when
 Second Treaty, of 1792. compensation for losses sustained by our merchants, and a factory to be established in Malwan until the several claims were discharged, was agreed to on the part of the Kolhapoor State.

The third treaty, in 1812, arranged for the settlement of the differences
 Third Treaty, of 1812. between the Peshwa and the Kolhapoor State, chiefly arising from the disputed claims to Chikoree and Munolee, now in the Belgaum Collectorate. It also provided for the security of our trade against the continued piracies of the subjects of this State, by ceding to us the fort and island of Malwan in perpetuity. In consideration of this cession, we guaranteed its territories from foreign aggression, while the State agreed to undertake no further hostility against any foreign State without our consent.

By the fourth treaty, in 1826, the Kolhapoor State engaged to reduce its
 Fourth Treaty, of 1826. army, and to attend to the advice of the British Government with regard to all measures affecting public tranquillity. We interfered in behalf of the lands and rights of the Waree State, and other petty Jageerdars, and the right of the Kolhapoor State was fully acknowledged to the districts of Chikoree and Munolee, the Raja engaging to respect the rights of the Zumindars and Wutundars of those districts.

The last treaty, in 1829, was rendered necessary by the infringement of
 Fifth Treaty, of 1829. Article II. of the treaty of 1826, wherein His Highness engaged to reduce his army to the peace establishment, and never to raise or assemble such a force as should be likely to endanger the public tranquillity within or without his dominions, unless with the previous

consent of the British Government. The Kolhapoor State engaged to reduce its military force to 400 horse, and 800 infantry, and as the Raja had failed in his engagement to respect the rights of the Inamdars and Wutundars in the ceded districts of Chikoree and Munolee, these districts were restored to us. The rights and privileges of other petty Jageers, which in the general disarrangement had also been interfered with, were again guaranteed to them, and lands transferred for the liquidation of the different claims. This treaty also gave us the right of appointing a minister, and of placing British garrisons in the forts of Kolhapoor and Punala, the State engaging to pay their expenses.

The reign of Bawa Saheb, from 1821 to 1838, was conducted with a marked disregard to the wishes of the British Government, and a total want of internal tranquillity.

Our relations from that time are fully entered into in a dispatch from the Honorable, the Court of Directors, dated 17th September 1845, to the Bombay Government, of which most of the following is a summary :—

Interference with the internal administration of Kolhapoor commenced on the death of Bawa Saheb, which occurred in November 1838, when it became the duty of the British Government to make arrangements for the government of that country during the minority of the present Raja.

The treaty of 1829 had given us the right of appointing a minister, but it was considered preferable to give support to the administration which might be acceptable to the persons of greatest influence in the State itself. The Sirdars of Kolhapoor had then mostly attached themselves either to the present Raja's late mother Tara Bae, or to the Dewan Saheb, widow of a previous Raja.

Attempts were made to form administrations under both these rival parties, but both proved equal failures; and the Bombay Government were convinced that it was necessary to appoint as chief manager a person wholly independent of the Durbar of Kolhapoor.

On the recommendation of Mr. Townsend, Political Agent Southern Muratha Country, Dajee Krishna Pundit, a servant of the British Government, and Dufturdar of Dharwar, was placed at the head of the regency. With him were first associated a member of the preceding ministry, and the Government Akburnavees, but both were eventually suspended, and Dajee was left sole minister.

This officer commenced his functions on the 5th April 1844, and on the 22nd July 1844 the first manifestation took place of armed opposition to his administration, by the Gurmurees, or hereditary garrison of the fort of Bhodurgur, shutting the gates against the Manlutdar. The insurrection soon became general, insomuch that before the military operations brought it to an end there were strong reasons for believing that there was not a single person of any note connected with the Kolhapoor State who would not be found more or less implicated.

“Such a display of hostility,” the Court remarks, “cannot, in our opinion, be

explained by the intrigues of a few persons, or by any partial or local dissatisfaction. The feeling must have been national. What has taken place is not an insurrection of disaffected subjects against the Kolhapoor Government, but a general rising of the Kolhapoor State against the British power."

The British Government had by its conduct given no cause for such hostility : it had attempted no fundamental alteration of existing institutions ; its object had been to correct gross abuses, and to secure the better working of the machinery of government.

It is probable that the measure of reducing the number of Mamlutdars, and enlarging their districts, alarmed the Gurkurees, who commenced the insurrection. They feared that their rights would be interfered with ; and their suspicions were worked upon by the disaffected in Kolhapoor, while the protracted military operations served to encourage the hopes of all.

The military operations to quell the insurrection occupied about five months, and the expenses therein incurred raised the debt of the State to the British Government to upwards of Rs. 15,00,000, of which about Rs. 6,00,000 have been paid off.

The young prince, then in his minority, was not considered to have been so implicated as to have forfeited his claim to the substantial powers of a ruler in case he should hereafter be deemed capable of governing worthily.

It was resolved that the administration should be carried on by a British Superintendent in the name of the Raja, until order should be established in the country, and in the finances ; but without any positive pledge being given to the Raja, who is given to understand that his ever being permitted to undertake the administration will depend on the opinion entertained of his character, disposition, and capacity to govern.

Under this system, Dajee Krishna Pundit, who came out of the investigations upon the insurrection with unblemished character, is continued as minister.

Notwithstanding the many chiefs implicated in the disturbances, only two Sirdars were severely punished, their estates confiscated, and themselves confined for life. They have both since died. With these exceptions, an act of amnesty placed all the Jageerdars and feudatories in their former position.

The forts have been dismantled, and the Gurkurees, retaining most of their privileges, have been made useful as local police. A large body of Seebundees, and 230 Bargeer horse, the remains of the old military force, conduct the police duties of the town and districts. The Kolhapoor infantry, under a second in command and adjutant, was intended to absorb the Gurkurees, but few if any of them would take service in the corps, which is composed of men from different parts of India, though chiefly of this State. It is well drilled, and in a good state of discipline.

The revenues of the Kolhapoor State, about Rs. 6,00,000, leave only about Rs. 30,000 balance to liquidate the debt due to the British Government.

The young prince, now about twenty-three years of age, takes no share in the administration, but receives an annual allowance of Rs. 80,000 for his own maintenance, and that of the different members of his family. He was married in 1847 to the daughter of a Satara Jageerdar, and has now gone to Baroda to be married to the Gaikwar's eldest daughter, who brings with her a dowry of about Rs. 4,00,000. He speaks, reads, and writes English tolerably, is pleasing and mild in his manner, and steady in his habits.

The younger prince, his half brother, is about twenty-three years old, and was married, in 1847, to the daughter of Nursing Rao Sinday, the late Sirdar of Nesree.

The affairs of the State are conducted by a minister, who is also chief revenue officer. The civil court is conducted by a Sudder Ameen and two Moonshis, and the criminal court by a Nayadhish, one Kotwal, and six Mamlutdars, who are also collectors of revenue in the districts. All are superintended by the Political Superintendent, who exercises an appellate jurisdiction over their decisions, and tries original civil suits when the amount of claim is upwards of Rs. 10,000.

Within the sphere of this political superintendency there are about 100 principalities, yielding an annual revenue of Rs. 4,20,274, but no one is wholly independent of the Kolhapoor State.

The Suwasthan of Inchulkurunjee, Bowra, and Vishalgur, with three other smaller Jageers, are held by minors, and their revenues, amounting to about Rs. 3,00,000, are more particularly superintended.

The whole have been divided into two classes, and powers of civil and criminal jurisdiction have been since 1848 conferred on all belonging to the 1st class, who were entitled by their rank or possessions to exercise them, under a monthly inspection by the Political Superintendent, to whom also an appeal is freely allowed in all cases.

The principality of Inchulkurunjee has been desirous to prove itself independent of Kolhapoor, but Government have not allowed its right to do so, though a direct correspondence through the Superintendent has been permitted.

With this exception, in which a superintendence, though direct, is equally particular, the Political Superintendent exercises a surveillance over all through the Durbar, receiving appeals and petitions from their subjects, while points of succession, adoptions, and Nuzuranas, &c. are conducted through the same channel, and decided either by Government, or by the Superintendent, as circumstances may require.

The principalities may be further classified—

6 whose lands were originally granted as ministers of state.

11 relations of His Highness the Raja.

79 Sirdars, Mootaliks, &c.

JAGEERDARS DEPENDENT ON THE KOLHAPOOR STATE.

VISHALGUR.

I. The name of the present Chief of Vishalgur is Krishna Rao, who is the fifteenth of a line of chiefs who, during a course of 194 years, have held the Jageer. This estate was created in the year 1660 by the great Shivajee. On the separation of the Satara State in 1729, this Jageer was continued on Sunud to Junardhun Punt, by Shivajee the first Prince of Kolhapoor.

The title of this chief is Pruteenidhee, or the Raja's deputy, one of the eight Prudhans of the Muratha rule. The present incumbent succeeded to the estate in 1848, and his age is twenty years.

II. The usual place of residence of this chief is Mulkaipoor, which is a small town situated on the river Shalee, and selected as a more healthy and agreeable location for the Court than the confined fortress which, until the year 1844, when the fortifications were destroyed, continued to be the head quarters of the Pruteenidhee.

III. The Chief has no legitimate male issue, and there are no persons of any note belonging to his Court.

IV. The Chief of Vishalgur, as the feudatory of Kolhapoor, pays an annual tribute of Rs. 6,455-5-8 to the parent State.

V. The estimated gross annual revenue of the estate amounts to Rs. 72,765-14-2.

VI. Its western boundary may be called the Western Ghauts, which also embrace it on the south. The Warna separates it from the Satara territory on the north, while to the east it is bounded by the Kolhapoor State.

The lands of this estate below the Ghauts have been transferred to the Rutnageeree Collectorate, which pays two-thirds of its collections to the Vishalgur estate, reserving the rest as tribute to the British Government, on account of its implication in the rebellion.

Its extent from the river Warna southward is about 36 miles, and from the Ghauts eastward about 20 miles, and its total area may be laid down at about 600 square miles.

VII. The chief soil is red. There is a considerable quantity of rice soil, but not much black or Mulee, and the soil of the whole estate is not considered rich.

Prevailing Nature of the Soil, usual Means of Irrigation, and General Features of the Country.

Irrigation is very partially resorted to by means of moats from wells, and the rivers.

The chief dependence is upon the annual rains, which never totally fail.

The estate, being situate on and near the Ghauts, is well wooded and hilly, and three rivers intersect it from west to east. Mulkapoor contains about 2,200 persons, and there are about 30 villages in the estate above the Ghauts, now the only portion considered as exclusively belonging to Vishalgur.

VIII. The productions of the country consist chiefly of rice, and the usual

Natural and Industrial Resources.

varieties of grain grown in a hilly country, possessing a moist climate, though not in sufficient quantity for the demand. Oil, wood, flax, wool, ghee, honey, and iron are

produced in considerable quantities, and large flocks of sheep are pastured among the hills. A sufficient quantity of cumblees and common cotton cloth are manufactured for home consumption, but there is no export trade in manufactures.

The finer descriptions of rice are all exported, and common grain largely imported instead. The exports further consist of ghee, honey, turmeric, duhee (curds), sheep, wood, and wax, and the imports of dried fruits, sugar, and condiments, cloth, metals, salt, and brass pots, forming a total of imports amounting to Rs. 1,13,963, against exports Rs. 76,425.

IX. There is no water communication. A road has been constructed, at the rate of Rs. 100 per mile, about eleven miles, over rocky

Routes, Approaches, and Means of Communication by Land and Water.

and red soil, and seven miles over black, from Kolhapoor and Mulkapoor, where a bridge over the united

waters of the Shalee and Kurwee, at a cost of Rs. 4,000, has been nearly finished. It is good for wheeled carriages, except during the monsoon. This is proposed to be carried on to the Amba Ghaut, by which there is a bullock road into the Konkun. The cross-roads are bridle and foot-paths.

X. The climate of the country generally is unhealthy, from the excessive cold and wind, as well as from want of good water.

Climate, and average Range of Thermometer.

The average range of thermometer has not been registered.

XI. The average annual fall of rain from 1849 to 1853 inclusive is 65 inches, according to the following return, obtained from

Average Annual Fall of Rain.

Dr. Broughton:—

| | | Ins. | Cts. |
|--------------|-----------------|------|------|
| For the year | 1849..... | 77 | .. |
| | Ditto 1850..... | 46 | .. |
| | Ditto 1851..... | 61 | 50 |
| | Ditto 1852..... | 63 | 75 |
| | Ditto 1853..... | 74 | 50 |

Estimated Population.

XII. The estimated population of the Vishalgur country amounts to 14,748 souls.

XIII. The description of religion, tribes, and castes, as given under Kolhapoor, applies to this estate. The people are chiefly Murathas.

Brief notice of the Mode in which Civil and Criminal Justice are administered.

XIV. The civil and criminal administration of the country is conducted, under the Chief, who is a minor, by a Government Karbharee, in accordance with the spirit of the Bombay Regulations.

XV. The punishments are those permitted by the British Government, and these, owing to the minority of the chief, the Karbharee is authorised to award for criminal offences, viz. three months' imprisonment, with or without hard labour, fine to the extent of Rs. 50, &c. Such cases as are beyond the jurisdiction of the Karbharee are committed for trial to the Nayadhlsh of Kolhapoor.

XVI. Since the introduction of British superintendency in Kolhapoor, a Government vernacular institution has been established at Mulkapoor, under a schoolmaster, who receives a salary of Rs. 12 per mensem. It is periodically visited by an inspector. The subjects of education are literature, history of England and Maharashtra, geography, grammar, geometry, arithmetic, and algebra. The number of boys of different castes attending this institution is 64, and a tuition fee of 1 anna per month is exacted. There are besides some schools throughout the country, established by private individuals, whose acquirements are very limited, and do not embrace the higher branches of science or literature. They are generally Bramins, and their emoluments, which rarely exceed Rs. 4-8-0 per mensem, are dependent on periodical presents of money and grain, and on the monthly fee taken from the boys, which varies from 2 to 8 annas.

Progress of Vaccination.

XVII. The progress of vaccination in the country of Vishalgur has hitherto been satisfactory, as proved from the following return :—

| | |
|--------------|-------|
| In 1850..... | 44 |
| In 1851..... | 414 |
| In 1852..... | 1,185 |
| In 1853..... | 1,192 |

Prevalent Diseases.

XVIII. The prevalent disease is intermittent fever, and occasionally typhus.

BOWRA.

I. The name of the present Chief of Bowra is Moreshwur Rao, who holds Name, Title, and the Jageer under the title of Punt Amatya, or minister of finance, one of the eight Prudhans of the Muratha rule. He is sixteen years of age, and succeeded to the estate in 1851.

This Jageer, with the office of Punt Amatya or minister of finance, was originally conferred by the great Shivajee on Niloo Sondeo, in the year 1660. In the year 1732, it was continued by Shivajee I. of Kolhapoor to Ramchundru Nilkunt.

Usual Place of Residence.

II. The usual place of residence of this chief is Bowra, which is situate at the distance of 42 miles from Kolhapoor to the north-west.

Names and Ages of legitimate Male Issue, and principal persons of the Court.

III. The young chief has no legitimate male issue, and there are no persons of any distinction attached to his Court.

Whether Tributary or not; if so, to whom, and Annual Amount of Tribute.

IV. The chief is the feudatory Jageerdar of the Kolhapoor State, and pays an annual tribute of Rs. 3,656-13-2.

Estimated gross Annual Revenue.

V. The estimated gross annual revenue of the Bowra estate amounts to Rs. 46,446-12-0.

Boundaries of Territory, and estimated Area in Square Miles.

VI. The country below the Ghauts stretches partly to the sea, but may be defined as bounded by Malwan and Viziadroog, and above the Ghauts by the villages belonging to the districts of Punala to the north, Kolhapoor to the east, and Bhloodurgur to the south.

The estimated extent of the country above the Ghauts is 20 by 12 miles, and below the Ghauts 32 by 12 miles, and the total area may be thus estimated at 600 square miles.

VII. The prevailing soil is red, of which a large proportion is rice soil. Prevailing Nature of the Soil, usual Means of Irrigation, and General Features of the Country.

There is not much black or Mulec, and the general nature of the soil of the estate is poor.

Irrigation is little resorted to, though both river and well water is conducted to the fields by the mout. Below the Ghauts the river and rivulet waters are in greater request, and the Persian wheel is used. The main dependence, however, is on the rain, which in the season seldom fails.

The estate is hilly, and well-wooded above the Ghauts. Four considerable streams, whose beds are never dry, flow from the Ghauts eastward, while two intersect the lands below the Ghauts, which are plain and well wooded.

VIII. The productions of the country are similar to those of the adjoining districts of Vishalgur, the exports exceeding the imports. The former consist of wood, molasses, ghee, birdey, gall-nuts, and rice, whilst rice and common grain, cotton, tobacco, sugar, and dried fruits, form the great articles of import.

IX. The only water communication existing is from the port of Viziadroog to the village of Pombhoorlé on the coast. A scarped road runs from Kolhapoor to Bowra, constructed at a cost of Rs. 50 per mile (26 miles over rocky and red soil and 10 over black), and fit for wheeled carriages, except in the monsoon. This road continues a bridle one down the Ghaut, and on towards Viziadroog. Besides this, there are only pathways traversing the country from village to village.

Natural and Industrial Resources.

X. The climate of Bowra is unhealthy, from the excessive wind, and falls of rain. The average range of thermometer has not been registered.

Routes, Approaches, and Means of Communication by Land and Water.

XI. The average annual fall of rain from 1849 to 1853 is about 300 inches, according to the following return, obtained from Dr. Broughton :—

| | | Ins. | Cts. |
|------------------------|--|------|------|
| For the year 1849..... | | 281 | 51 |
| Ditto 1850..... | | 294 | 90 |
| Ditto 1851..... | | 280 | 72 |
| Ditto 1852..... | | 361 | 30 |
| Ditto 1853..... | | 387 | 40 |

Average Annual Fall of Rain.

XII. The estimated population of the country is 29,845 souls.

Estimated Population.

XIII. The description of religion, tribes, and castes, as given under Kolhapoor,* applies equally to this estate. The people are chiefly Murathas.

Religion, Language, Tribes, and Castes.

XIV. and XV. The estate is similarly situated with Vishalgur in its civil and criminal jurisdiction, as also in the nature of its punishments.

XVI. The vernacular school is also on the same footing with that of the dependency above mentioned. There are 14 scholars attending the Government school. There are also similar schools established by private individuals in some of the villages.

XVII. The Vaccinator receives Rs. 10 per mensem, and is paid by the estate. The following return shows the progress of vaccination in the country of Bowra :—

Brief notice of the Mode in which Civil and Criminal Justice are administered, and nature of Punishments awarded for Criminal Offences.

Progress of Vaccination.

| XVIII. The prevalent diseases are intermittent fever and dropsy. | |
| Prevalent Diseases. | |

INCHULKURUNJEE.

I. The name of the Chief of Inchulkurunjee was Keshow Rao Narayan, who, having died in the year 1852, was succeeded in adoption by Venkut Rao Sahab, who also died in the month of April 1854. This Jagher was conferred in A. D. 1713 by Suntajee Rao Ghorepuday, an ancestor of the Kapsee family, upon Naro Mahadeo, for his distinguished conduct in the field.

The Chief of Inchulkurunjee is styled Ghorepuday, which title was also conferred upon Naro Mahadeo, the ancestor of the family, by the Chief of Kapsee.

II. The usual place of residence of this chief was Inchulkurunjee, which is a town situated at the distance of 18 miles from Kolhapoor.

III. The deceased chief has no legitimate male issue, and there are no persons of any distinction attached to his Court.

IV. The estate pays to Kolhapoor an annual sum of Rs. 3,200, composed of two items of Rs. 2,000 and Rs. 1,200, the former being the amount of contribution for the Kolhapoor infantry, and the latter on account of Durbar expenses.

V. The estimated gross annual revenue of the Inchulkurunjee estate amounts to Rs. 1,05,000.

VI. It is difficult to define the boundaries of this estate, as so many of its villages are detached, both throughout the Kolhapoor State and the Konkun. The principal portion, however, may be defined as bounded by the Meeruj and Koorundwar districts on the east, the Alte Peta Mamlutdaree on the north, the Kurweer Mamlutdaree on the west, and Kagul with a portion of Belgaum on the south.

The portion of the territory whose boundaries are defined measures about 30 miles long by 20 broad, but the total area, including all lands belonging to the estate, may be computed at 800 square miles.

VII. The soil of the villages in the lands above the Ghauts is chiefly black, with a considerable quantity of red and alluvial deposit, and that of the villages below the Ghauts is the same, with the exception of red.

The river Punchgunga intersects this estate. Irrigation

is resorted to by means of the moat, from this river, and wells, of which there are a considerable number. Rain is less certain in this estate, owing to its distance from the Ghauts, but it is nevertheless the main stay, and seldom wholly fails.

The general appearance of this estate above the Ghauts is flat, trees being restricted to the villages. The Konkun lands are well wooded.

VIII. The productions are grain of various sorts, tobacco, ghee, goor, cotton, and country cloth. In common with the other dependencies of the parent State, the population is agricultural, and manufactures are restricted to a few cumbles and cotton cloths, some of which, however, are exported.

Natural and Industrial Resources.

Routes, Approaches, and Means of Communication by Land and Water.

Climate, and average Range of Thermometer.

Average Annual Fall of Rain.

Estimated Population.

XIII. The prevalent religion is Hindoo, and Murathee is the language chiefly spoken throughout the country. Canarese is also made use of in some places. The description of tribes and castes as given for Kolhapoor is equally applicable to this estate.

Religion, Language, Tribes, and Castes.

XIV. The civil and criminal justice of the country were hitherto administered on the same principles as of old, but measures have recently been adopted to carry out the administration according to the spirit of the Bombay Regulations.

Brief notice of the Mode in which Civil and Criminal Justice are administered.

XV. The Chief of Inchulkurunjee is allowed to inflict any punishment, with the exception of death, transportation for any period, and imprisonment for any term above ten years. Reports of heinous offences, such as murder, dacoity, &c. are also made to the Political Superintendent for disposal.

Nature of Punishments awarded for Criminal Offences.

XVI. Inchulkurunjee has no Government vernacular institution. There are, however, in the country, some schools established by private individuals, wherein the course of instruction consists of a tolerable knowledge of reading and writing Murathee, and of practical arithmetic.

Educational Measures.

XVII. Very much opposition has been shown to vaccination, but this has been partially overcome by the exertions of the Civil Surgeon, and the following return shows a rapid stride. There is a vaccinator, paid by the estate Rs. 12 per mensem.

Progress of Vaccination.

| | |
|--------------|-------|
| In 1852..... | 387 |
| In 1853..... | 1,392 |

Prevalent Diseases.

XVIII. The prevalent disease is chiefly intermittent fever.

KAGUL.

I. This Jageer is divided among the three principal branches of the Ghatgay family, represented by—

| | |
|-----------------------------------|----------------------------|
| Name, Title, and Age of Chief. | 1, Jysing Rao Baba Saheb. |
| | 2, Narayen Rao Saheb. |
| | 3, Rumabae Saheb of Walwa. |

These chiefs bear the title of Wujarut Mab,* and are aged seventy-five, twenty, and thirty years respectively.

This Jageer was originally received from Yusoof Adil Shah, the last King of Beejapoor, and was confirmed to the Ghatgay family by the Emperor of Delhi.

II. Jysing Rao Baba Saheb, the representative of the elder branch of the Kagul family, resides in Hindustan, where he has other resources at his command. His affairs at Kagul are conducted by a Karbhar of his own.

Narayen Rao Saheb, in consequence of the matrimonial alliance between himself and the youngest sister of His Highness the Raja of Kolhapoor, resides at Kolhapoor. His usual place of residence, however, is Kagul, which is situate about 12 miles from Kolhapoor.

Rumabae Saheb, the fourth wife of Wishwas Rao, resides at Walwa, which is a town situated about 15 miles from Kolhapoor.

Names and Ages of Legitimate Male Issue. III. None of these chiefs has any male issue, and the principal persons of their respective Courts consist of their own Vukeels, Karkoons, &c.

Whether Tributary or not; if so, to whom, and annual Amount of Tribute. IV. The chiefs are not tributaries.

V. The estimated gross annual revenue of the Jageer amounts to Rs. 68,463-2-6.

VI. The estate is encircled by Alte, Kolhapoor, Bhoodurgur, Gur Ingluz, Kapsce, Inchulkurunjee, and some villages of the Belgaum Zilla.

Boundaries of Territory, and estimated Area in Square Miles.

Its extent is about 20 miles long and 15 broad, and its area about 300 square miles.

VII. The chief soil is black, but there is a considerable quantity of red, rice, and rocky soil.

Prevailing Nature of the Soil, usual Means of Irrigation, and General Features of the Country.

Irrigation by means of the moat is very prevalent. The small rivulets are also banked up, and their water drawn off to the fields in many villages.

This estate is situate in the plain, nearly 30 miles from the Ghauts. It is

* "Receptacle (or worthy) of the office of Minister."

barely wooded, and its general appearance is flat, the Wedgunga and Doodgunga rivers intersecting it from west to east. The villages are generally surrounded with trees, which relieve the flatness and bareness of the landscape.

VIII. The productions of the country, as well as exports and imports, are

Natural and Industrial Resources. similar in description to those of the adjoining district of Inchulkurunjee.

IX. There is no water communication. The high road from Satara to Bel-

Routes, Approaches, and Means of Communication by Land and Water. gaum runs through this estate, chiefly over rocky and red soil. It cost Rs. 143 per mile. Besides this, there are but pathways from village to village.

X. The climate of the country is more agreeable than that of Kolhapoor,

Climate, and average Range of Thermometer. but a want of good water is experienced. The range of thermometer has not been registered.

XI. No pluviometer is kept at Kagul, but the fall is probably much the

Average Annual Fall of Rain. same as at Kolhapoor, from whence it is only 12 miles distant. The average annual fall at Kolhapoor for the last five years is 30 inches and 18 cents.

Estimated Population. XII. The estimated population of the Kagul country amounts to 28,290 souls.

Religion, Language, Tribes, and Castes. XIII. The description of religion, tribes, and castes, as given for Kolhapoor,* applies to this estate.

XIV. The civil and criminal administration of the estate of Jysing Rao

Brief notice of the Mode in which Civil and Criminal Justice are administered. Baba Saheb is deputed by the chief to a Karbharee of his own, who conducts affairs in accordance with the spirit of the Bombay Regulations.

Narayan Rao Saheb is entrusted, as an experiment, with the management of his affairs for one year.

Rumabae Saheb conducts her own affairs.

Nature of Punishments awarded for Criminal Offences. XV. The several parties carry out the same punishments as have already been described for the other minor dependencies.

Educational Measures. XVI. The educational measures are carried out in this estate as in Vishalgur and Bowra. There are 39 boys in the Government schools.

Progress of Vaccination. XVII. The progress of vaccination has hitherto been slow, though, as will be seen by the following return, the increase is steady :—

| | |
|--------------|-----|
| In 1852..... | 520 |
| In 1853..... | 928 |

Prevalent Diseases. XVIII. The prevalent diseases are intermittent fever, and rheumatism.

KAPSEE.

The house of Ghorepuday, which is one of the oldest in the Muratha empire, is divided into three branches.

At the head of the first is Narayen Rao. He resides at the family fort called Moodhole, on the Gutprublia.

At the head of the second branch is Bhoojung Rao, whose hereditary residence is Gujendrugur; and the following particulars are concerning the head of the third branch of this family.

I. The name of the present Chief of Kapsee is Ramchundru Rao Ghorepuday, who holds the Jagcer, with the nominal title of Name, Age, and Title of Chief. Senaputee, or commander of the army, one of the eight Prudhans of the Muratha empire; he is about thirty-six years of age, and succeeded to the estate in the year 1836. The title of Senaputee was conferred upon Suntajee Rao Ghorepuday by His Highness Raja Ram, as a reward for his having proved himself useful in the acquisition of territory.

II. The usual place of residence of this Chief is Kapsee, which is situate at Usual Place of Residence. the distance of about 30 miles from the town of Kollhapoor.

III. He has two legitimate sons: the first is named Suntajee Rao, aged six years, and the second Luxoomon Rao, aged one year; and his Vukeel and Karkoons are the principal persons of the Court. Names and Ages of Legitimate Male Issue, and of the principal persons of the Court.

IV. The chief is the feudatory Jageerdar of the Whether Tributary or not; if so, to whom, and annual Amount of Tribute. Kollhapoor State, and pays an annual tribute of Rs. 205-5-3.

V. The estimated gross annual revenue of the Kapsee estate amounts to Rs. 22,455. Estimated gross Annual Revenue.

VI. The country is bounded by Bhoodurgur, Gur Ingluz, Inchuikurunjee, and certain villages of the Chikoree Talooka of Belgaumi. Its extent is about 13 miles long and 12 broad, and the total area may be laid down at 150 square miles. Boundaries of Territory, and estimated Area in Square Miles.

VII. The soil may be classed into three sorts,—black, alluvial deposit, and red,—in about equal proportions. Prevailing Nature of the Soil, usual Means of Irrigation, and General Features of the Country.

The Chikotra river intersects the estate from west to east, and water for irrigation is raised from it by the moat. There are also a few wells from whence water is raised by the same process.

The estate bears the same character as the other Desh lands—flat and bare, with trees only round the villages.

VIII. The productions of the country are molasses, tobacco, cotton, oil, ghee, and vegetables. Natural and Industrial Resources.

IX. There is no made road traversing this small estate, though the high road from Kolhapoor to Gur Ingluz skirts its boundaries, and the country is intersected by pathways between the villages, of which there are sixteen.

X. The climate is temperate, the description of climate for the Kolhapoor State applying to it, as situate on the verge of the Desh or plain country. The range of the thermometer has not been registered.

Climate, and average Range of Thermometer.

XI. The average annual fall of rain at Bhoodurgur, which is distant from Kapsee about 12 miles, is about 75 inches for the last five years.

Average Annual Fall of Rain.

XII. The estimated population is 8,035 souls.

Estimated Population.

XIII. The description of religion, tribes, and castes, as given for Kolhapoor,* applies to the estate.

Religion, Language, Tribes, and Castes.

XIV. The civil and criminal administration of the country is satisfactorily conducted by the chief himself, in accordance with the spirit of the Bombay Regulations.

Brief notice of the Mode in which Civil and Criminal Justice are administered.

XV. The chief is authorised to give the same punishments as the chiefs before described; offences requiring severer punishment being sent for trial before the Kolhapoor Criminal Court.

Nature of Punishments awarded for Criminal Offences.

XVI. There is no Government institution at Kapsee. There are, however, some schools established by private individuals throughout the country.

Educational Measures.

XVII. The benefits of vaccination have been only partially extended to Kapsee, as they have no distinct vaccinator; but the estate is periodically visited by a Kolhapoor vaccinator.

Progress of Vaccination.

XVIII. The prevalent disease is intermittent fever.

Prevalent Diseases.

TOREGUL.

I. The name of the present Chief of Toregul is Soobhan Rao Sinday. He is about twenty-six years of age, and succeeded to the estate in the year 1853.

Name, Title, and Age of Chief.

This chief bears the title of Senakhaskhel,† which was bestowed upon his grandfather Soobhan Rao Sinday by Sumbhajee I. in A. D. 1732, in consequence of his having proved himself useful in quelling an insurrection in the Deccan. Toregul and other villages were in the year 1690 assigned by the great Shivajee to Nandojee Jewrao and Sooltan Rao, sons of Moorar Rao, in return for important military services.

Usual Place of Residence.

II. This chief's usual place of residence is Toregul, which is situated at a distance of 90 miles from Kolhapoor.

* Vide page 539.

† "Commander of the select body of Troops."

III. He has three legitimate sons, viz:—

Names and Ages of
Legitimate Male Issue,
and of the principal
persons of the Court.

1. Sumbhajeo Rao, aged nine years.
2. Luxoomon Rao, aged six years.
3. Gopal Rao, aged five years.

The principal persons of his Court consist of his

Vukeels and Karkoons.

Whether Tributary or not;
if so, to whom, and annual
Amount of Tribute.

IV. The chief is the tributary of Kolhapoor, and serves the State by a quota of 2 horse and 20 foot.

Estimated gross An-
nual Revenue.

V. The estimated gross annual revenue of the country amounts to Rs. 32,820.

Boundaries of the
Territory, and estimated
Area in Square Miles.

VI. The estate is situate in the heart of the Belgaum Collectorate, and completely separate from this State as to locality. Its area is about 24 square miles.

VII. Its soil is

Prevailing Nature of
the Soil, usual Means of
Irrigation, and General
Features of the Country.

chiefly rocky, with a very little black. The Mulprubha runs through it, but its water is scarcely at all used in irrigation, and, with the exception of a few wells, the estate depends wholly on the annual fall of rain.

Natural and Indus-
trial Resources.

VIII. Its productions are chiefly bajree: there are no manufactures.

Routes, Approaches,
and Means of Commu-
nication by Land and
Water.

IX. No made road intersects this small estate, but there are smaller roads running to Ramdroog, Kulludghee, Dharwar, and Belgaum.

Climate, and average
Range of Thermometer.

X. The climate is temperate.

Average Annual Fall
of Rain.

XI. The average annual fall of rain has not been ascertained.

Estimated Population.

XII. The estimated population of the country amounts to 30,000 souls.

Religion, Language,
Tribes, and Castes.

XIII. The description of religion, tribes, and castes, as given for Kolhapoor,* applies also to this estate.

Brief notice of the
Mode in which Civil
and Criminal Justice
are administered.

XIV. The chief conducts the civil and criminal administration in accordance with the spirit of the Regulations.

Nature of Punish-
ments awarded in Cri-
minal Offences.

XV. He has the same power in awards and punishments as granted to the other dependent Jageer-dars.

Educational Measures.

XVI. With the exception of one or two private schools, there is no other educational establishment.

XVII. Vaccination is carried out, under the orders of the Superintendent

Progress of Vaccina-
tion.

in the Southern Muratha Country, and owing to the distance from Kolhapoor, the arrangements have not

been so carefully supervised as those in the other dependent Jageers.

Prevalent Diseases.

XVIII. The prevalent disease is intermittent fever.

* Vide page 539.

TREATIES AND AGREEMENTS

ENTERED INTO

BETWEEN THE HONORABLE EAST INDIA COMPANY
AND THE KOLHAPOOR STATE,

Between the 12th January 1766 and the 15th March 1829.

KOLHAPPOOR.

Articles of Agreement made with the Maharaja JEEJA BAE, at Fort Augustus, under date the 12th January 1766.

ARTICLE I.

There shall be a perpetual peace and firm friendship re-established between the Honorable Company and Maharaja Jeeja Baee, the Ranee, their successors and heirs ; and for the stricter observance of the following treaty of peace, Maharaja Jeeja Baee, the Ranee, agrees to send one hostage of note, with his family, to reside at Bombay, and to be maintained at her charge.

ARTICLE II.

Maharaja Jeeja Baee, the Ranee, agrees to pay the Honorable Company seven lakhs fifty thousand (7,50,000) rupees, as restitution for the expenses they have been at during the troubles subsisting between the respective parties, and maintaining the different garrisons at Fort Augustus and its dependencies : three lakhs sixty thousand (3,60,000) to be paid within two months from the 12th January, 1766, the remaining three lakhs ninety thousand (3,90,000) to be paid within four years from the date hereof ; that is, one lakh (1,00,000) for the three first years, and ninety thousand (90,000) the last year, for the performance of which Maharaja Jeeja Baee, the Ranee, agrees to give two substantial securities, such as may be approved of by the Honorable the President and Council of Bombay, and she also agrees to allow six (6) per cent. exchange on the three lakhs sixty thousand (3,60,000) that is to be paid before the delivery of the fort, which is to be in the following sort of rupees : Hookeree, Peerkhane, Arcotee, Shazanee, and Aurungshae, and the remainder to be made good, equal to Bombay rupees.

ARTICLE III.

The Honorable Company, in consideration of Maharaja Jeeja Baee, the Ranee, fulfilling the foregoing Article, do agree, on the payment of the first sum, that is three lakhs sixty thousand (3,60,000), to deliver up to her (Maharaja Jeeja Baee) the Fort of Augustus, formerly called Sindhoodoorg, with the forts of Rajkote, Surjekote, and Pudrumdoorg, and do further renounce all claim or pretensions to the lands and tenements belonging thereto.

ARTICLE IV.

The Honorable Company will carry away all guns, carriages, mortars, shot, shells, powder, stores, &c. of what kind soever, that they may have brought

here; and they do give up to Maharaja Jeeja Baee, the Ranee, such guns and carriages as are here, that were belonging to Fort Augustus; also those at Rajkote, Surjekote, and Pudrumdoorg.

ARTICLE V.

Maharaja Jeeja Baee, the Ranee, will permit the Honorable Company to build a factory, with warehouses, at Rajkote, or at such place as may be most convenient for them (at which place they will hoist their flag), or any part of her territories, adjacent to the sea shore, for vending their commodities, and to keep there such servants or people, as also vessels or boats, as they shall think necessary for conducting the same; and should any of the merchants, or others her subjects, become debtors to the English, they shall have free liberty to imprison their persons, and seize their effects, and vend them, till satisfaction is made and obtained.

ARTICLE VI.

The English subjects and the subjects of the Ranee shall have free liberty to trade and commerce with each other, without any hindrance or molestation whatever.

ARTICLE VII.

Maharaja Jeeja Baee, the Ranee, will not directly or indirectly give any hindrance or molestation to any vessels or boats with English colours and passes, or any vessels and boats going under English convoys. In like manner, the English will not molest any vessels or boats belonging to Maharaja Jeeja Baee, the Ranee, or her subjects.

ARTICLE VIII.

Maharaja Jeeja Baee, the Ranee, grants to the English an exclusive right of importing and vending all Europe cloths, lead, iron, steel, copper, and Europe commodities, in her territories, and to pass the same through her country.

ARTICLE IX.

Maharaja Jeeja Baee, the Ranee, will allow all merchants or Vunjaras free liberty to pass and repass her territories, to and from the English factory at Malwan, near Rajkote, or at any place where they build one, with their effects, merchandize, packages, carriages, and beasts of burden, they paying the duties agreeable to the custom practised at Gheria, Rajapoor, and no more, on any pretence whatever; and whatever goods are landed at the English factories, no customs whatever are to be levied: when they are carried out by the merchants, then they are to pay the duties, agreeable to the custom before mentioned.

ARTIC

Maharaja Jeeja Bae, the Ranee, w
 belonging to the English, whether P
 give strict orders to her officers to
 nor suffer any European deserters to
 to the Resident of the English factory.
 applied for or not. The English wi
 subjects of the Ranee ; and slaves to be i

ARTICLE XI.

. If any vessels or boats belonging to the English
 any time be driven ashore, or wrecked, in any part of the Ranee.
 she agrees to afford all suitable assistance for the preservation of men, vessels
 and their cargoes, and whatever part thereof may be saved to be delivered to
 the lawful owners without any salvage whatever, except the labourers' hire.
 The English, on their parts, to observe the same in respect to the subjects of
 the Ranee, their vessels or boats.

ARTICLE XII.

Maharaja Jeeja Bae, the Ranee, will not, by menaces or otherwise, directly
 or indirectly, plunder, or in any shape molest the inhabitants or others that may
 have served or lived under the protection of the English, during the time they
 had possession of Fort Augustus and its dependencies, but permit them to
 enjoy peaceably their houses, lands, and tenements, in the same free and
 ample manner as when the Malwan Government subsisted, before the English
 took that place.

ARTICLE XIII.

The Honorable Company will, at the same time that Fort Augustus is
 delivered up to Maharaja Jeeja Bae, the Ranee, deliver to her the prisoners
 taken in Sindhoodoorg Fort when they conquered it, and who are now at
 Bombay.

ARTICLE XIV.

Maharaja Jeeja Bae, the Ranee, agrees, should the Honorable Company
 be attacked, and they should require her assistance, to provide them with what
 troops they may want, they supplying them with provisions only. The Honor-
 able Company, in like manner, agrees to assist the Ranee, should it be conven-
 nient for them.

*Kolhapoor State, under date the 25th
1792.*

*Persian Interpreter to the Honorable
MAY, President and Governor of
Commandant of Cavalry to SHIVAJEE,
and with full powers to form a Convention
debt due by the said Raja to the Honorable
disfying the Merchants under the protection
may for the losses they have sustained by the
the year One thousand Seven hundred and Eighty-five,
have agreed to the following Articles, viz :—*

ARTICLE I.

The friendship that formerly subsisted between the Honorable Company and the Raja of Kolhapoor is hereby renewed and confirmed, and the disputes that have lately subsisted between the two Governments will be settled, when the following Articles are executed and fulfilled.

ARTICLE II.

The Raja of Kolhapoor hereby agrees to discharge the balance due by him to the Honorable Company, agreeably to his engagement with Mr. Brome, in three separate payments, the first payment to be made on the first day of January one thousand seven hundred and ninety-three, and the others on the first of every succeeding January, until the whole is discharged, which shall be done on the first of January one thousand seven hundred and ninety-five.

ARTICLE III.

The above debt, due by the Kolhapoor Raja to the Honorable Company, having for many years borne interest, which, from the distresses of the Kolhapoor Government for a length of time past the Raja has been totally unable to pay, he therefore throws himself on the mercy of the Honorable Company, in hopes of their relinquishing a demand he is without resources to discharge. It is therefore agreed, that if the other parts of this Convention are faithfully and fully complied with on the part of the Raja, no demand shall be made for the said interest.

ARTICLE IV.

The Raja of Kolhapoor, in order to satisfy the Merchants for the losses they have sustained by his fleet, since the year one thousand seven hundred and eighty-five, the account of which, calculated with interest to the thirty-first of July one thousand seven hundred and ninety-two, has been transmitted to him by the Honorable Major General Robert Abercromby, President and

Governor of Bombay, agrees to pay immediately purpose by Balajee Ram) twenty thousand rupees further sum of thirty-five thousand rupees, to be made in payments : the first to be paid on the first of next Month, and the first of every succeeding March, until the whole is paid, and be considered as a full compensation for the losses they have sustained.

ARTICLE V.

As a security for the payments before mentioned, and to convince the Honorable Company that no interruption shall be given by his fleet to any vessels sailing with English passes, the Raja of Kolhapoor hereby agrees to a factory being established on the island of Malabar where the English flag shall be hoisted, until the several claims are discharged, or to be permanent, at the option of the Honorable Company. The Raja will likewise grant the English a factory, if required, at Kolhapoor, where he resides himself ; and the provisions wanted for as many sepoys as the Honorable Company shall keep at both of these factories shall be supplied at the Raja's own expense, until these Articles are fully executed.

ARTICLE VI.

Balajee Ram being invested with full powers from his master, the Kolhapoor Raja, to conclude this Agreement, and to sign the same, and affix the public seal given to him by the Raja for that purpose, it becomes binding on the said Raja when signed and sealed by the said Balajee Ram. On the part of the Honorable Company this Convention becomes binding if approved of by the Right Honorable Charles Earl Cornwallis, K.G., Governor General of India, and full powers are delegated by him for the same to be signed and sealed on behalf of the said Honorable Company.

Agreed on at Bombay, by Lieutenant WILLIAM THOMAS SANDIFORD, Persian Interpreter to the Honorable Major General ROBERT ABERCROMBY, President and Governor of Bombay, on the one part ; and BALAJEE RAM, Commandant of Cavalry to the Raja of Kolhapoor, on the other, this Twenty-fifth day of November, in the Year of our Lord One thousand Seven hundred and Ninety-two.

The original of the above Agreement, written in the Muratha language, is signed.

Signature of BALAJEE RAM SURLUSHKUR,

By order of his Master, the Raja of Kolhapoor.

MEMORANDUM.—*The above Treaty was ratified by the Governor General in Council, under date the 24th December 1792.*

ja of Kolhapoor, dated the 1st October 1812.

included between the Raja of Kolhapoor and the Honorable Company and His Highness the Peshwa on the one part, and the Raja of Kolhapoor on the other.

ARTICLE I.

perpetual peace and friendship between the allied Governments of the Honorable Company and His Highness the Peshwa on the one part, and His Highness the Raja of Kolhapoor on the other.

ARTICLE II.

The Raja of Kolhapoor on his own part, and on that of his heirs and successors, hereby renounces all right and claim of whatever description on the districts of Chikoree and Munolee, and all dependencies which have hitherto been comprehended in those districts. The districts aforesaid are henceforward to belong in absolute sovereignty to Rao Pundit Prudhan Peshwa Bahadoor, his heirs and successors.

ARTICLE III.

All the forts and country taken in consequence of the wars occasioned by the disputed claims to Chikoree and Munolee, from the Raja of Kolhapoor, within the last four years, *i. e.* since the month of September 1808, and now occupied by the troops of Rao Pundit Prudhan Peshwa Bahadoor, shall be immediately restored to the Raja of Kolhapoor.

ARTICLE IV.

The Raja of Kolhapoor hereby renounces all other claims of whatever description on Rao Pundit Prudhan Peshwa Bahadoor, and on all and every part of his dominions, with the exception of the new conquests mentioned in Article III. His Highness the Maharaja likewise renounces all claim upon Nepance; His Highness the Raja of Kolhapoor hereby further renounces all claims of whatever description on all the Peshwa's subjects, of whatever rank and denomination.

ARTICLE V.

For the security of the British trade against a renewal of the piratical depredations formerly practised by the Raja of Kolhapoor's subjects, the Raja of Kolhapoor hereby agrees, on his own part, and on the part of his heirs and successors, to cede to the Honorable Company perpetual sovereignty the harbour of Malwan, that is to say, the fort and island of Sindhoodoorg or Malwan, and the forts of Pudumgur, Rajkote, and Surjekote, with the lands dependent on the said forts, and the British troops shall immediately be put in possession of the said forts and their dependencies.

ARTICLE VI.

His Highness the Raja of Kolhapoor engages on his own part, and on that of his heirs and successors, never to employ any armaments, or to employ any armed vessels to be fitted out at, or to enter any of the ports which shall remain in His Highness's possession, after the cession of the territories mentioned, or which he may hereafter acquire; and the agents of the Honorable Company's vessels shall have the right to search the said ports, or that may have sailed from them; and if any armed vessels are found in vessels so searched, the said vessels shall be taken into the possession of the Honorable Company. The Raja further engages to permit agents of the Honorable Company to reside in all ports in his dominions, which may hereafter fall into his hands, for the purpose of ascertaining the number of all vessels lying in such ports, and to permit the said agents to search the said vessels.

ARTICLE VII.

If any ship bearing the British flag, or furnished with a British pass, or belonging to the allies of the British Government, should hereafter put into the ports of the Raja of Kolhapoor, or be driven by stress of weather, or any other cause, upon his shores, His Highness the Raja of Kolhapoor engages on his own part, and on that of his heirs and successors, that all practicable assistance shall be rendered to such vessels. And the Raja further agrees, that no claim shall be advanced by himself or any of his subjects on any vessel, belonging to whatever nation, that may be shipwrecked or driven by stress of weather upon his shores.

ARTICLE VIII.

In consideration of the cession of the harbour of Malwan, and on condition of the effectual suppression of piracy, the Honorable Company engages to guarantee such territories as shall remain in the Raja of Kolhapoor's possession against the aggression of all Foreign Powers and States.

ARTICLE IX.

With a view to the full execution of the agreement contained in the foregoing Article, His Highness the Raja of Kolhapoor, on his own part, and on that of his heirs and successors, engages not to pursue any measures of hostility against Foreign States, without the previous consent of the Honorable Company; and if any differences shall in future arise between His Highness, his heirs and successors, and any Foreign Power or State, the Honorable Company shall apply themselves to the adjustment of such differences, conformably to justice and propriety; and His Highness the Raja of Kolhapoor agrees, that whatever adjustment of such differences the Honorable Company shall determine, His Highness shall acquiesce in, and abide by. His Highness the Raja of Kolhapoor, on his part, and on that of his heirs and successors, engages not to

States which may have originated previously to the
 should the conditions contained in this Article not be
 Article VIII. is to be considered null and void.

ARTICLE X.

as demands subsist on the part of the Honorable Company
 against the Raja of Kolhapoor, in consequence of depredations
 on the trade of the Honorable Company and its subjects;
 the Company being convinced of the Raja's inability to satisfy those
 demands, his sincere desire to prevent a repetition of the injuries formerly
 complained of, consents to relinquish all pecuniary claims and demands
 whatsoever against the Raja of Kolhapoor.

What is hereby ten in the above X. Articles is hereby agreed to.

*Articles of Agreement concluded on the 24thth,
 SHAHAJEE CHUTRUPUTEE MAHARAJ KUR^h
 Kolhapoor, and the British Government.* ”

PREAMBLE.—*Whereas a Treaty of peace and friendship
 the British Government and the Raja of Kolhapoor on
 and whereas certain misunderstandings have since arisen
 removal of those misunderstandings, and to the confirmatⁿ
 the following Articles have been agreed on, between the two* its:—

ARTICLE I.

Such parts of the former Treaty, concluded on the 1st October 1822, as are not affected by the provisions of the present engagement, shall remain in full force, and are mutually binding on the contracting parties.

ARTICLE II.

The Raja of Kolhapoor engages to reduce his army to the peace establishment, and never to raise or assemble such a force as shall be likely to endanger the public tranquillity, within or without his territories, unless with the previous consent of the British Government. The Raja further engages to attend to the advice of the British Government on all measures calculated to affect the public tranquillity. But this Article is no wise to diminish the independence of the said Raja, as a sovereign prince.

ARTICLE III.

The Raja of Kolhapoor engages never to molest Hindoo Rao Ghatgay Kargulkur, or Narayan Rao Ghorepuday Inghulkurunjeeur, in the enjoyment of their respective lands and rights, according to ancient custom.

ARTICLE IV.

The districts of Chikoree and Munolee were transferred to the Raja of Kolhapoor by a Sunud under the signature of Major General Sir Thomas Munro, Bart., K.C.B., but have not yet been mentioned in any Treaty or Agreement. The Honorable East India Company now acknowledges them to be ceded to the Raja of Kolhapoor in full sovereignty; the Raja engaging on his part to respect the rights and privileges of the Zamindars, Inamdars, and Wutundars of the said districts.

ARTICLE V.

His Highness the Raja of Kolhapoor hereby recognizes the award of the British Government, made in 1822, relative to the half Umuls in the Sawunt Warea territory, and engages to respect the rights of the Warea State

He also consents to the territorial arrangement of
ment in land, in such part of the Carnatic Collector-
um by the British local authorities.

ARTICLE VI.

Kolhapoor engages never to grant an asylum to the enemies of
the British Government, nor to rebels. The Raja also promises, that if any
offenders issuing from his territories shall commit robberies
against those of the British Government, or of other States, His
Highness shall apprehend them and deliver them up; and His Highness further
consents, in case he shall not fully restrain such offenders, the British Go-
vernment shall give due notice to the Raja, and shall, after such notice, be
competent to send its troops and police into His Highness's
territories for the apprehension of the said offenders, and His Highness shall
afford any necessary assistance to the troops or police to enable them to dis-
cover and apprehend the objects of their pursuit. If any persons who have
committed offences in the Raja's territory shall take refuge in that of the
Company, the British Government will, after due investigation, adopt such
measures in regard to the said offenders as equity and justice may appear to
require, adopting at the same time every means to prevent their committing
any acts injurious to the territories of the Raja.

ARTICLE VII.

The Raja of Kolhapoor promises to continue to Bhao Maharaj and Baba
Maharaj their respective lands and rights, agreeably to the Schedule
annexed.

The guarantee of the British Government to the enjoyment of the above
lands and rights shall only continue during the life-time of the above mentioned
persons, but the rights of their descendants, as founded on Sunud or custom,
shall not be prejudiced by the cessation of the said guarantee.

ARTICLE VIII.

The Raja having given his unqualified assent to the demand upon him for
the injuries occasioned to the several individuals whose possessions and rights
he had evaded, according to the Schedule annexed, hereby agrees to pay such
sums as may be adjusted after a full investigation into the extent of the losses
actually incurred, and, in failure thereof, within sixty days after such final ad-
justment, to transfer to the British Government such portions of the Purgunas
of Chikoree and Munolee as were formerly ceded to the Kolhapoor Raja, for
such term of years as may be necessary to collect a sum equal to the amount
due, the principal Collector and Political Agent engaging on his part to render
a faithful account of the sums collected, and expenses of management, during
the occupation of those Purgunas.

*Articles of Agreement concluded, on the 15th March 1829, between
the Raja SHAHOO CHUTRUPUTEE KURWEERKUR, Raja of Kolha-
poor, and the British Government.*

PREAMBLE.—*Whereas a Treaty of peace and friendship was concluded be-
tween the British Government and His Highness the Raja of Kolhapoor
on the 24th of January 1826, and whereas His Highness having com-
mitted several acts in direct violation of the said Treaty, and in hostile
opposition to the British Government, a Preliminary Treaty* for repealing,*

* This Preliminary Treaty is omitted, it having been superseded by the Treaty of the 15th March 1829.

respectively the conditions of the aforesaid Treaty, of a new nature, was agreed to at Kolhapoor on A. D. 1827, between Raja SHAHOO CHUTRUPUTEE Kolhapoor, on the one part, and JOSIAH NISBET, Esq., on the other; and whereas it has been deemed advisable to alter the parts of the said Preliminary Treaty, the following has been finally agreed on by the two Governments:—

ARTICLE I.

of the
His Highness
of the
Highness
consent
vername
com
ter
of the aforesaid Treaty His Highness Chutruputtee Saheb reduce his army to the peace establishment, and never to maintain such a force as should be likely to endanger the public tranquillity of his dominions, unless with the previous consent of the British Government; notwithstanding which, His Highness lately collected a large army, and, in spite of all advice from the British Government, proceeded to commit a variety of excesses: it has therefore become requisite to limit the number of His Highness's troops, and His Highness hereby engages not to keep more than 400 horse (including "Khas Paga," "Surinjame," "Shetsundee," &c.) and 800 infantry, exclusive of moderate garrisons for his forts, as per annexed list. His Highness further engages never to be accompanied by guns without the sanction of the British Government.

ARTICLE II.

In Article IV. of the above Treaty the British Government ceded the districts of Chikoree and Munlee in full sovereignty to His Highness, he engaging on his part to respect the right and privileges of the Zaminsdars, Inamdars, and Wutundars of the said districts." When this grant was made by the British Government, it was hoped that peace and good-will would have subsisted for many generations between the two Governments; but instead of this, His Highness has uniformly evinced a total disregard of the friendship of the British Government; and in violation of the above condition, has repeatedly infringed the rights of the Inamdars and Wutundars of those Talookas: it therefore becomes necessary that His Highness should give back to the British Government the said Talookas in the same state in which he received them, and His Highness hereby agrees to do so.

ARTICLE III.

In Article VII. of the said Treaty the possessions of Bhao Maharaj and Baba Maharaj were guaranteed to them for the terms of their respective lives only, provision being made that the "rights of their Descendants, as founded on Sanud or custom, should not be prejudiced by the cessation of the said guarantee." As, however, His Highness Chutruputtee Saheb has never ceased to annoy and distress these persons, by seizing their villages and other property, it has been deemed necessary to extend the guarantee of the British Govern-

ment to their descendants, and His Highness
molest them.

Accordingly engages never to

ARTICLE IV.

Maharaj Chutruputtee Sahib having, on the death of
resumed all but two of the eight and a half villages ^{which} was Rao Ghatgay,
Talooka, now engages to restore the whole to the ^{by} in the Kanger
never again to interfere with them. ^{of} used, and

ARTICLE V.

In having been deemed necessary, in consequence of the number of
injuries committed on "Surinjamdars," and other persons under the protection
of the British Government, by the inhabitants of Akewat, and of its being
place of general resort for robbers, that it should be given up to the British
Government, the Maharaj hereby engages to cede the same, together with
lands adjoining, to the value of ten thousand rupees per annum.

ARTICLE VI.

His Highness Chutruputtee Sahib having compelled the British Government,
by various acts of aggression, committed in direct breach of the above Treaty,
to have recourse to arms, it has been deemed necessary, as security for his
future good conduct, that he should admit British garrisons into the forts of
Kolhapoor and Punalagur, and His Highness hereby accordingly agrees to do
so, and further engages to pay the expense of such garrisons.

ARTICLE VII.

Maharaj Chutruputtee Sahib having hitherto neglected to afford redress
to Rao Sahib Putwurdhun, Apajee Rao Sctolc, Bhao Maharaj, and
Maharaj, for the injuries done to them in 1826, as agreed with the late
Agent, Mr. Baber, and having recently committed still more serious
aggressions against these and other chiefs under the protection of the British
Government, His Highness hereby engages to pay, as per annexed Schedule,
the sum of one lakh, forty-seven thousand, nine hundred and forty-eight
(1,47,948) rupees, the same being the aggregate amount of claims, admitted,
after a full investigation, to be due to the injured parties; and His Highness
further agrees to transfer to the British Government, for the purpose of liqui-
dating the said debt, territory yielding an annual revenue of 50,000 rupees,
the principal Collector and Political Agent engaging on his part to render a
faithful account of the sums collected, and expenses of management, during the
occupation of the said territory.

ARTICLE VIII.

The British Government deeming it necessary to appoint a Chief Minister
for the future management of the Raja's Government, His Highness

putee Sâheb hereby engages to be guided by his advice in all matters relating to the administration of his State, the British Government having the sole power of appointing or removing the said Minister, as they may see fit.

ARTICLE IX.

Such parts of the former Treaty, concluded on the 24th day of January 1826, as are not affected by the provisions of the present Agreement, shall remain in full force, and are mutually binding on the contracting parties.

The above IX. Articles were agreed to at Kollhapoor, the 9th day of Rumzan (corresponding with the 15th March A. D. 1829).

Raja of Kolhapoor, Soorser
Uhuf, prohibiting Suttee in the*

Know all our subjects, the British Government, that immolation, as performed by females, within their territory, and accordingly recommended on the subject, and have resolved to rule. We therefore proclaim that no person in our dominions. Should any female resolve to determine her fate, it is incumbent on all the respectable people of the village, and also her neighbours, and Wutundars, and K-mavidars, to give her any aid, and to use their remonstrance to induce her to change her resolution; they should also ascertain the cause of her wish to be immolated, whether it is owing to grief, or otherwise, and a promise should be held out to her of relief being afforded. The person or persons so preventing her will report the matter to the head of the village, who will communicate the same to the Mamlutdar, and he will make the same known to us, when he will take measures in accordance with the usage of her caste.
